

VIT®

Vellore Institute of Technology

(Deemed to be University under section 3 of UGC Act, 1956)

# **School of Computer Science and Engineering**

# CURRICULUM AND SYLLABI (2024-2025)

# **M.Tech (CSE) – (Data Science) – 5 year Integrated**

Category Credit Detail					
Sl.No.	Description	Credits		Maximum Credit	
1	PC - Programme Core	81		81	
2	PE - Programme Elective	48		48	
3	UC - University Core	61		61	
4	UE - University Elective	12		12	
5	SPE - Specialization Elective	18		18	
6	BC - Bridge Course	0		0	
7	NC - Non Credit Course	5		5	
<b>Total Credits</b>		<b>225</b>			

Programme Core									
sl.no	Course Code	Course Title	Course Type	Ver sio n	L	T	P	J	Credits
1	CSI1001	Principles of Database Systems	Embedded Theory and Lab	1.0	2	0	2	0	3.0
2	CSI1002	Operating System Principles	Embedded Theory and Lab	1.0	2	0	2	0	3.0
3	CSI1003	Formal Languages and Automata Theory	Theory Only	1.0	3	0	0	0	3.0
4	CSI1004	Computer Organization and Architecture	Theory Only	1.0	3	0	0	0	3.0
5	CSI1007	Software Engineering Principles	Embedded Theory and Lab	1.0	2	0	2	0	3.0
6	CSI2001	Digital logic and Computer Design	Embedded Theory and Lab	1.0	3	0	2	0	4.0
7	CSI2002	Data Structures and Algorithm Analysis	Embedded Theory and Lab	1.0	3	0	2	0	4.0
8	CSI2003	Advanced Algorithms	Embedded Theory and Lab	1.0	2	0	2	0	3.0
9	CSI2004	Advanced Database Management Systems	Theory Only	1.0	3	0	0	0	3.0
10	CSI2005	Principles of Compiler Design	Theory Only	1.0	3	0	0	0	3.0
11	CSI2006	Microprocessor and Interfacing Techniques	Embedded Theory and Lab	1.0	2	0	2	0	3.0
12	CSI2007	Data Communication and Networks	Embedded Theory and Lab	1.0	3	0	2	0	4.0
13	CSI2008	Programming in Java	Embedded Theory and Lab	1.0	3	0	2	0	4.0
14	CSI3001	Cloud Computing Methodologies	Embedded Theory and Lab	1.0	3	0	2	0	4.0
15	CSI3002	Applied Cryptography and Network Security	Embedded Theory and Lab	1.0	2	0	2	0	3.0
16	CSI3003	Artificial Intelligence and Expert Systems	Theory Only	1.0	3	0	0	0	3.0
17	CSI3004	Data Science Programming	Embedded Theory and Lab	1.0	2	0	2	0	3.0
18	CSI3005	Advanced Data Visualization Techniques	Embedded Theory and Lab	1.0	3	0	2	0	4.0

Programme Core								
19	EEE1024	Fundamentals of Electrical and Electronics Engineering	Embedded Theory and Lab	1.0	2	0	2	0
20	MAT1014	Discrete Mathematics and Graph Theory	Theory Only	1.1	3	2	0	0
21	MAT1022	Linear Algebra	Theory Only	1.0	3	0	0	0
22	MDI3001	Advances in Web Technologies	Embedded Theory and Lab	1.0	3	0	2	0
23	MDI3002	Foundations of Data Science	Theory Only	1.0	3	0	0	0
24	MDI4001	Machine Learning for Data Science	Embedded Theory and Lab	1.0	3	0	2	0

Programme Elective									
sl.no	Course Code	Course Title	Course Type	Ver sio n	L	T	P	J	Credits
1	CSI1005	User Interface Design	Embedded Theory and Lab	1.1	2	0	2	0	3.0
2	CSI3006	Soft Computing Techniques	Embedded Theory and Project	1.0	3	0	0	4	4.0
3	CSI3007	Advanced Python Programming	Embedded Theory and Lab	1.0	2	0	4	0	4.0
4	CSI3008	Internet of Everything	Embedded Theory and Lab	1.0	3	0	2	0	4.0
5	CSI3009	Advanced Wireless Networks	Embedded Theory and Lab	1.0	3	0	2	0	4.0
6	CSI3011	Computer Graphics and Multimedia	Embedded Theory and Lab	1.0	3	0	2	0	4.0
7	CSI3012	Distributed Systems	Embedded Theory and Lab	1.0	3	0	2	0	4.0
8	CSI3013	Blockchain Technologies	Embedded Theory and Project	1.0	3	0	0	4	4.0
9	CSI3014	Software Verification and Validation	Theory Only	1.0	3	0	0	0	3.0

<b>CSI1001</b>	<b>Principles of Database Systems</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>						
		2	0	2	0	3						
<b>Pre-requisite</b>	<b>Syllabus version</b>											
	1.0											
<b>Course Objectives:</b>												
<ol style="list-style-type: none"> <li>1. To understand the basic concepts of DBMS and ER Modeling.</li> <li>2. To comprehend the concepts normalization, query optimization and relational algebra.</li> <li>3. To apply the concurrency control, recovery, security and indexing for the existent domain problems.</li> </ol>												
<b>Expected Course Outcome:</b>												
<ol style="list-style-type: none"> <li>1. Acquire a good understanding of the architecture and functioning of database management systems</li> <li>2. Ability to construct an ER model, derive the relational schemas from the model</li> <li>3. Analyze and improve a database design by normalization.</li> <li>4. Ability to associate the basic database storage structure and access techniques including B Tree and B+ Tress</li> <li>5. Analyze the basics of query evaluation and heuristic query optimization techniques.</li> <li>6. Learn concepts of concurrency control for the desirable database problem.</li> <li>7. Analyze the fundamental concepts of recovery mechanisms and learn the recent trends in database.</li> </ol>												
<b>Module:1</b>	<b>DATABASE SYSTEMS CONCEPTS AND ARCHITECTURE</b>	<b>4 hours</b>										
Need for Database Systems – Characteristics of Database Approach – Actors in DBMS- Database Administrator - Data Models – Relational, Hierarchical and Network models - Schemas, and Instances - Three-Schema Architecture - The Database System Environment – Overall System Structure/Architecture – Querying- Query Languages - Relational Algebra - Relational Calculus												
<b>Module:2</b>	<b>DATA MODELING</b>	<b>4 hours</b>										
Entity Relationship Model: Types of Attributes, Relationship, Structural Constraints – Relational Model, Relational Model Constraints – Mapping ER model to a Relational Schema – Integrity Constraints-Extended E-R model - Generalisation – Specialization - Aggregation												
<b>Module:3</b>	<b>DATABASE DESIGN</b>	<b>5 hours</b>										
Guidelines for Relational Schema - Functional Dependency; Normalization, Boyce Codd Normal Form, Multi-valued Dependency and Fourth Normal Form; Join Dependency and Fifth Normal Form												
<b>Module:4</b>	<b>QUERY PROCESSING AND TRANSACTION PROCESSING</b>	<b>5 hours</b>										
Translating SQL Queries into Relational Algebra – Heuristic Query Optimization – Introduction to Transaction Processing – Transaction and System Concepts - Desirable Properties of Transactions – Characterizing Schedules based on Recoverability – Characterizing Schedules based on Serializability - Test for Serializability - Need for Locking - Compatibility Matrix for Locks - Deadlocks in Transactions.												
<b>Module:5</b>	<b>PHYSICAL DATABASE DESIGN</b>	<b>5 hours</b>										
File Organization - RAID devices - Indexing: Single Level Indexing, Multi-level Indexing, Dynamic Multilevel Indexing , Indexing on Multiple Keys – B-Tree Indexing – B+ Tree Indexes - Hashing - Static and Dynamic Hashing.												
<b>Module:6</b>	<b>CONCURRENCY CONTROL</b>	<b>3 hours</b>										
Lock based protocols - Two-Phase Locking - Graph based Protocols - Tree Protocol - Techniques for Concurrency Control - Concurrency Control based on Timestamp based protocols.												

<b>Module:7</b>	<b>RECOVERY TECHNIQUES</b>	<b>2 hours</b>
Recovery Concepts - Recovery based on Deferred Update - Recovery Techniques based on Immediate Update – Shadow Paging – Distributed databases - Distributed Transactions – Commit Protocols		
<b>Module:8</b>	<b>CONTEMPORARY ISSUES</b>	<b>2 hours</b>
	<b>Total Lecture hours:</b>	<b>30 hours</b>
<b>Text Book(s)</b>		
1.	R. Elmasri & S. B. Navathe, Fundamentals of Database Systems, Addison Wesley, 7 <sup>th</sup> Edition, 2016.	
2.	A. Silberschatz, H. F. Korth& S. Sudershan, Database System Concepts, McGraw Hill, 7 <sup>th</sup> Edition 2019.	
<b>Reference Books</b>		
1.	Raghu Ramakrishnan, Johannes Gehrke, “Database Management Systems”, Fourth Edition, Tata McGraw Hill, 2015.	
2.	Thomas Connolly, Carolyn Begg, Database Systems: A Practical Approach to Design, Implementation and Management,6th Edition,Pearson,2015	
3.	C. J. Date, A. Kannan, S. Swamynathan, “An Introduction to Database Systems”, Eighth Edition, Pearson Education, 2006	
Mode of Evaluation:CAT/ Digital Assignment/Quiz/FAT/ Project.		
<b>List of Experiments</b>		
1.	SQL tool, Data types in SQL, Creating Tables (along with Primary and Foreign keys), Altering Tables and Dropping Tables	3 hours
2.	Practice Queries using COUNT, SUM, AVG, MAX, MIN, GROUP BY, HAVING, VIEWS Creation and Dropping.	3 hours
3.	Practicing Sub queries (Nested, Correlated) and Joins (Inner, Outer and Equi)	3 hours
4.	Practicing Queries using ANY, ALL, IN, EXISTS, NOT EXISTS, UNION, INTERSECT, CONSTRAINTS etc.	3 hours
5.	Iterations using For Loop,While Loop and Do while	3 hours
6.	Declaring Cursor, Opening Cursor, Fetching the data, closing the cursor	3 hours
7.	Creation of Stored Procedures, Execution of Procedure, and Modification of Procedure	3 hours
8.	Practicing User Defined Exceptionand System Defined Exception	3 hours
9.	Creation of trigger, Insertion using trigger, Deletion using trigger, Updating using trigger	3 hours
10.	Database Application development	3 hours
Total Laboratory Hours		<b>30 hours</b>
Mode of assessment: Assessment Examination, FAT Lab Examination		
Recommended by Board of Studies	16-09-2020	
Approved by Academic Council	No. 59	Date 24-09-2020

<b>CSI1002</b>	<b>Operating System Principles</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>						
		2	0	2	0	3						
<b>Pre-requisite</b>	<b>Syllabus version</b>											
	1.0											
<b>Course Objectives:</b>												
<p>1. To introduce Operating system concepts, designs and provide the skills required to implement the services.</p> <p>2. To understand the structure and organization of the file system.</p> <p>3. To understand what a process is and how processes are synchronized and scheduled.</p> <p>4. To understand different approaches of memory management, system call for managing process and file system.</p>												
<b>Expected Course Outcome:</b>												
<p>Upon completion of the course, the students will be able to</p> <p>1. Gain extensive knowledge on principles and modules of operating systems</p> <p>2. Interpret the evolution of OS functionality, structures, layers and different system calls to find the stages of various process states.</p> <p>3. Design a model scheduling algorithm to compute various scheduling criteria.</p> <p>4. Apply and analyze communication between inter process and synchronization techniques.</p> <p>5. Implement page replacement algorithms, memory management and to apply the file system techniques.</p> <p>6. Representing virtualization and demonstrating the various Operating system tasks and the principle algorithms for enumerating those tasks.</p>												
<b>Module:1</b>	<b>Introduction</b>	<b>4 hours</b>										
Computer-System Organization, Computer-System Architecture, Operating-System Structure (monolithic, layered, modular, micro-kernel models), Operating-System Operations, Operating-System Services, User and Operating- System Interface, System Calls.												
<b>Module:2</b>	<b>Processes</b>	<b>4 hours</b>										
Process Concept, Operations on Processes, Inter-process Communication, Threads - Overview, Multithreading Models.												
<b>Module:3</b>	<b>CPU Scheduling</b>	<b>4 hours</b>										
Basic Concepts, Scheduling Criteria, Scheduling Algorithms, Threads, Multiple-Processor Scheduling, Deadlocks- System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.												
<b>Module:4</b>	<b>Process Synchronization</b>	<b>4 hours</b>										
Background, The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic Problems of Synchronization, Monitors, Synchronization Example.												
<b>Module:5</b>	<b>Memory Management</b>	<b>4 hours</b>										
Introduction, Swapping, Contiguous Memory Allocation, Segmentation, Paging, structure of the Page Table.												
<b>Module:6</b>	<b>Virtual Memory</b>	<b>4 hours</b>										
Background, Demand Paging, Page Replacement, Allocation of Frames, Thrashing, Introduction to Virtualization.												
<b>Module:7</b>	<b>Mass-Storage Structure</b>	<b>4 hours</b>										
Overview, Disk Structure, Disk Scheduling. File -System Interface - File Concept, Access Methods, Directory and Disk Structure, Directory Implementation, Allocation Methods. Future directions in Mobile OS.												
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>										

	<b>Total Lecture hours:</b>	<b>30 hours</b>		
<b>Text Book(s)</b>				
1.	A.Silberschatz, P. B. Galvin & G. Gagne, Operating system concepts, Ninth Edition, John Wiley, 2018.			
<b>Reference Books</b>				
1.	W. Stallings, Operating Systems-Internals and Design Principles, Seventh Edition, Prentice- Hall,2012.			
2.	Andrew.S Tanenbaum & Herbert Bos, Modern Operating Systems, Fourth Edition, Prentice Hall,2015.			
3.	Remzi H. Arpacı-Dusseau, Andrea C. Arpacı-Dusseau, Operating Systems, Three Easy Pieces, Arpacı-Dusseau Books, Inc (2015).			
Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar				
<b>List of Experiments</b>				
1.	Study of Linux commands – System Information, Files and Directories, Process, Text Processing and Scripting, Programming.	3 hours		
2.	Shell scripting (I/O, decision making, looping)	3 hours		
3.	Creating Child process (using fork), Zombie, Orphan. Displaying system information using C.	3 hours		
4.	CPU Scheduling Algorithms (FCFS, SJF, RR, Priority)	3 hours		
5.	Deadlock Avoidance Algorithm (Bankers algorithm)	3 hours		
6.	IPC (Threads, Pipes)	3 hours		
7.	Process synchronization (Producer Consumer / Reader Writer/Dining Philosopher using semaphores)	3 hours		
8.	Dynamic Memory Allocation Algorithms (First fit, Best fit, Worst fit)	3 hours		
9.	Page Replacement Algorithms. (FIFO, LRU, Optimal)	3 hours		
10.	Disk Scheduling Algorithms.	3 hours		
Total Laboratory Hours		<b>30 hours</b>

Approved by Academic Council	No. 59	Date 24-09-2020		

<b>CSI1003</b>	<b>Formal Languages and Automata Theory</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>						
		3	0	0	0	3						
<b>Pre-requisite</b>	<b>Syllabus version</b>											
	1.0											
<b>Course Objectives:</b>												
The objective of this course is to learn												
1. Types of grammars and models of automata.												
2. Limitation of computation: What can be and what cannot be computed.												
3. Establishing connections among grammars, automata and formal languages and realize the theoretical concepts and techniques involved in the software system development												
<b>Expected Course Outcome:</b>												
After successfully completing the course the student should be able to												
1. Model, compare and analyse different computational models												
2. Apply rigorously formal mathematical methods to prove properties of languages, grammars and automata.												
3. Identify limitations of some computational models and possible methods of proving them.												
4. Explain the abstract concepts mathematically with notations												
<b>Module:1</b>	<b>Introduction to Languages and Grammars</b>	<b>4 hours</b>										
Recall on Proof techniques in Mathematics - Overview of a Computational Models - Languages and Grammars - Alphabets - Strings - Operations on Languages, Overview on Automata												
<b>Module:2</b>	<b>Finite State Automata</b>	<b>8 hours</b>										
Finite Automata (FA) - Deterministic Finite Automata (DFA) - Non-deterministic Finite Automata (NFA) - NFA with epsilon transitions – NFA without epsilon transition, conversion of NFA to DFA, Equivalence of NFA and DFA – minimization of DFA												
<b>Module:3</b>	<b>Regular Expressions and Languages</b>	<b>7 hours</b>										
Regular Expression - FA and Regular Expressions: FA to regular expression and regular expression to FA - Pattern matching and regular expressions - Regular grammar and FA - Pumping lemma for regular languages - Closure properties of regular languages, linear grammars and linear languages.												
<b>Module:4</b>	<b>Context Free Grammars</b>	<b>7 hours</b>										
Context-Free Grammar (CFG) – Derivations - Parse Trees - Ambiguity in CFG - CYK algorithm – Simplification of CFG – Elimination of Useless symbols, Unit productions, Null productions - Normal forms for CFG: CNF and GNF - Pumping Lemma for CFL - Closure Properties of CFL, context-sensitive grammars definition and examples												
<b>Module:5</b>	<b>Pushdown Automata</b>	<b>5 hours</b>										
Definition of the Pushdown automata - Languages of a Pushdown automata – Power of Non-Deterministic Pushdown Automata and deterministic pushdown automata												
<b>Module:6</b>	<b>Turing Machine</b>	<b>6 hours</b>										
Turing Machines as acceptor and transducer - Multi head and Multi tape Turing Machines – Universal Turing Machine - The Halting problem - Turing-Church thesis												
<b>Module:7</b>	<b>Recursive and Recursively Enumerable Languages</b>	<b>6 hours</b>										
Recursive and Recursively Enumerable Languages, Language that is not Recursively Enumerable (RE) – computable functions – Chomsky Hierarchy – Undecidable problems - Post's Correspondence Problem												
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>										
		<b>Total Lecture hours:</b>										
		<b>45 hours</b>										
<b>Text Book(s)</b>												
1.	John C. Martin, "Introduction to Languages and the Theory of Computation", Fourth Edition, McGraw-Hill Higher Education Publishers, 2010.											
2.	Peter Linz, "An Introduction to Formal Language and Automata", Fourth Edition,											

	Narosa Publishers, New Delhi, 2013.
<b>Reference Books</b>	
1.	K. Krithivasan and R. Rama, "Introduction to Formal Languages, Automata and Computation", Pearson Education, 2009.
2.	J.E. Hopcroft, R. Motwani and J.D. Ullman, "Introduction to Automata Theory, Languages and Computations", Third Edition, Pearson Education, 2014.
3.	Micheal Sipser, Introduction of the Theory and Computation, Third Edition, Thomson Brokecole <a href="#">Cengage Learning</a> , 2012.
4.	Dexter C. Kozen, "Automata and Computability", Springer Publishers, 2012.

<b>CSI1004</b>	<b>Computer Organization And Architecture</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>						
		3	0	0	0	3						
<b>Pre-requisite</b>	<b>Syllabus version</b>											
	1.0											
<b>Course Objectives:</b>												
<p>1. To familiarize students with the fundamental components, architecture, register organization and performance metrics of a computer.</p> <p>2. To make students capable for understanding and analyzing the effects of each instruction execution and the data path in those instruction execution.</p> <p>3. To impart the knowledge of data representation in binary and understand implementation of arithmetic algorithms in a typical computer.</p> <p>4. To make students understand the importance of memory systems, IO interfacing techniques and external storage and their performance metrics for a typical computer.</p>												
<b>Expected Course Outcome:</b>												
<p>1. Understand the general architecture of a computer system and the instruction based architecture.</p> <p>2. Illustrate various binary data representations for fixed and floating point data. Validate efficient algorithm for arithmetic operations.</p> <p>3. Explain the importance of hierarchical memory organization. Able to construct larger memories. Analyze and suggest efficient cache mapping technique and replacement algorithms for given design requirements. Get the idea about different external storage devices.</p> <p>4. Understand the need for an interface. Compare and contrast memory mapping and IO mapping techniques. Describe and Differentiate different modes of data transfer. Appraise the synchronous and asynchronous bus for performance and arbitration.</p> <p>5. Understand some system performance enhancement techniques such as pipeline concepts, parallel execution, etc. Introduction to some of the advanced architectures.</p>												
<b>Module:1</b>	<b>Introduction to computer architecture</b>	<b>4 hours</b>										
Introduction to computer systems - Overview of Organization and Architecture – Components, Registers and register files, Connections – Von Neumann machine (IAS Machine) – Architecture – Communication between components												
<b>Module:2</b>	<b>Instruction Set Architecture</b>	<b>6 hours</b>										
Introduction to ISA (Instruction Set Architecture): Instruction formats - Instruction types - Addressing modes - Instruction cycle – Introduction to Assembly Language Programming.												
<b>Module:3</b>	<b>Data Representation And Computer Arithmetic</b>	<b>9 hours</b>										
Data Representation – Introduction to Fixed point representation of numbers - Floating point representation of numbers (IEEE standard representation) - Algorithms for fixed point arithmetic operations: Addition, Subtraction, Multiplication (Booth's Algorithm), Division - Representation of non-numeric data (character codes).												
<b>Module:4</b>	<b>Memory System Organization &amp; Architecture</b>	<b>10 hours</b>										
Memory systems hierarchy - Main memory organization – Byte ordering - Memory interleaving - Memory characteristics - Cache memories: Introduction - Parameters of Cache memory - Address mapping – Read and write policies - Cache Coherence - Virtual memory systems - TLB - Page replacement Algorithms.												
<b>Module:5</b>	<b>Interfacing and Communication I/O fundamentals</b>	<b>7 hours</b>										
I/O fundamentals: I/O Modules, I/O mapped I/O and Memory Mapped I/O - Introduction to I/O techniques: Programmed I/O, Interrupt-driven I/O, DMA - Interrupt structures: Interrupt cycle, Subroutine call and return mechanisms - Bus System: Synchronous and asynchronous buses, Bus Arbitration.												
<b>Module:6</b>	<b>Device Subsystems</b>	<b>4 hours</b>										
External storage systems - Organization and structure of disk drives: Electronic, Magnetic and												

optical technologies - RAID Levels - I/O Performance		
<b>Module:7</b>	<b>Performance Enhancements</b>	<b>4 hours</b>
Classification of models - Flynn's taxonomy of parallel machine models (SISD, SIMD, MISD, MIMD) - Introduction to data path - Introduction to Pipelining - Pipelined data path - Introduction to hazards.		
<b>Module:8</b>	<b>Recent Trends</b>	<b>1 hour</b>
	<b>Total Lecture hours:</b>	<b>45 hours</b>
<b>Text Book(s)</b>

<b>CSI1007</b>	<b>Software Engineering Principles</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>							
		2	0	2	0	3							
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version 1.0</b>											
<b>Course Objectives:</b>													
<p>1. To introduce the essential software engineering concepts involved in developing software products and components</p> <p>2. To impart development skills during design, implementation and testing of reliable software systems across various disciplines</p> <p>3. To familiarize engineering practices and standards used in developing software products and components</p>													
<b>Course Outcome:</b>													
<p>1. Apply the principles of Software engineering methodology during software development and deployment process.</p> <p>2. Document various processes like Requirement Engineering, Design and Testing.</p> <p>3. Demonstrate an ability to use the techniques and tools necessary for significant application domains</p> <p>4. Apply software testing and quality knowledge and engineering methods for various applications</p> <p>5. Analyze the effectiveness of managing software projects through various techniques like Estimations, Scheduling and Quality Models</p> <p>6. Apply benchmarking standards in process and in product.</p>													
<b>Student Learning Outcomes (SLO):</b>				<b>6,9,13</b>									
<b>Module:1</b>	<b>Introduction</b>	<b>5 hours</b>											
Software Engineering- Need, Importance and its characteristics - Software Process- Generic process model-Prescriptive process model-specialized, unified process-Agile development-Agile Process- Extreme Programming- Other agile Process models-Software engineering Knowledge-core Principles-Principles that guide each framework Activity.													
<b>Module:2</b>	<b>Software Requirement Analysis</b>	<b>5 hours</b>											
Requirements Engineering-Establishing the Groundwork-Eliciting Requirements- Developing use cases-Building the requirements model-Negotiating, validating Requirements-Requirements Analysis-Requirements Modeling Strategies.													
<p><b>Specifying Requirements:</b> functional and non-functional requirements; specification exercise.</p> <p><b>Managing the Requirements Process:</b> methods which provide a structure for co-operation between different stake holders.</p> <p><b>Prototyping:</b> The role of prototyping in requirements techniques for prototyping.</p> <p><b>Requirements for Future Technologies:</b> Computer Supported Co-operative Work (CSCW); networked multi-media systems.</p>													
<b>Module:3</b>	<b>Software Design</b>	<b>5 hours</b>											
Design concepts and principles - Abstraction - Refinement - Modularity – Cohesion & coupling, Architectural design, Detailed Design – Transaction & Transformation, Refactoring of designs, Object-oriented Design User-Interface Design; Object Oriented Design Concepts and Diagrams - Use Case Diagrams - Class Diagrams - Interaction Diagrams - State chart Diagrams - Activity Diagrams - Package Diagrams - Component Diagrams – Deployment Diagrams													
<b>Module:4</b>	<b>Software Implementation</b>	<b>4 hours</b>											
Structured coding Techniques-Coding Styles-Standards and Guidelines- Documentation Guidelines-Modern Programming Language Features: Type checking-User defined data types- Data Abstraction-Exception Handling- Concurrency Mechanism – Seven Steps of implementing software – Implementation Challenges and its resolution.													
<b>Module:5</b>	<b>Software Testing</b>	<b>4 hours</b>											
TESTING: Introduction; Software Testing Fundamental; Testing Principles; Testing Levels;													

Verification and Validation: Validation Testing, Validation Test Criteria; Test Plan: Test Documentation; Test Strategies: Top-Down Testing, Bottom-Up Testing, Thread testing, Stress testing, Back-to-back testing; Testing methods and tools: Testing through reviews, Black-box testing (Functional testing), White box testing (glass-box testing), Testing software changes; Additional requirements in testing OO Systems; Metrics Collection, Computation, and Evaluation; Test and QA plan; Managing Testing Functions.

<b>Module:6</b>	<b>Software Maintenance</b>	<b>3 hours</b>
Software Maintenance, Types of Maintenance, Structured versus unstructured maintenance – Maintenance costs – Typical problems with maintenance and its side-effects – Maintenance process - Software Configuration Management – Component Reusability - Overview of RE-engineering & Reverse Engineering- Business Process Reengineering- Restructuring- Forward Engineering- Economics of Reengineering.		
<b>Module:7</b>	<b>Project Planning and Risk Management</b>	<b>2 hours</b>
Objectives of Activity planning – Project schedules – Activities – Sequencing and scheduling – Network Planning models – Forward Pass & Backward Pass techniques – Critical path (CRM) method – Risk identification – Assessment – Monitoring – PERT technique – Monte Carlo simulation – Resource Allocation – Creation of critical patterns – Cost schedules.		
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
<b>Total Hours</b>		<b>30 Hrs</b>
<b>Lab Experiments</b>		
<ol style="list-style-type: none"> <li>1. Work Break-down Structure (Process Based, Product Based, Geographic Based and Role Based)</li> <li>2. Estimations – Cost &amp; Schedule</li> <li>3. Entity Relationship Diagram, Context flow diagram, DFD (Structural Modeling and Functional Modeling)</li> <li>4. State Transition Diagrams (Behavioral Modeling)</li> <li>5. System Requirements Specification</li> <li>6. UML diagrams for OO Design</li> <li>7. Tools for Version Control</li> <li>8. Black-box, White-box testing Non-functional testing</li> </ol>		<b>30 Hrs</b>

<b>CSI2001</b>	<b>DIGITAL LOGIC AND COMPUTER DESIGN</b>	<b>L   T   P   J   C</b>		
		<b>3   0   2   0   4</b>		
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>		
		<b>1.0</b>		
<b>Course Objectives:</b>				
1. To acquaint students with the basic concepts of digital and binary systems. 2. To analyze and design combinational and sequential logic circuits for real world applications. 3. To apply the theoretical concepts in designing the circuits using appropriate tools and hardwares.				
<b>Expected Course Outcomes:</b>				
Upon completion of the course, the students will be able to 1. Differentiate and represent the different types of number system. 2. Express and reduce the logic functions using Boolean Algebra and K-map. 3. Design minimal combinational logic circuits. 4. Analyze the operation of medium complexity standard combinational circuits like the encoder, decoder, multiplexer, demultiplexer. 5. Analyze and Design the Basic Sequential Logic Circuits 6. Outline the construction of Basic Arithmetic and Logic Circuits 7. Acquire design thinking capability, ability to design a component with realistic constraints, to solve real world engineering problems and analyze the results.				
<b>Student Learning Outcomes (SLO):</b>	<b>2,5,14</b>			
<b>Module:1</b>	<b>Introduction to Digital Logic</b>	<b>3 hours</b>		
Number System, Base Conversion, Binary Codes, Complements, Logic gates, Universal gates, Positive and Negative Logic				
<b>Module:2</b>	<b>Boolean Algebra</b>	<b>6 hours</b>		
Boolean algebra, Properties of Boolean algebra, Boolean functions, Canonical and Standard forms, Karnaugh map (up to 5 variables), Dont care conditions, Tabulation Method (up to 5 variables).				
<b>Module:3</b>	<b>Introduction To Combinational Circuit</b>	<b>6 hours</b>		
Design of combinational circuits, Adder, Subtractor, Code Converter, Analyzing a Combinational Circuit.				
<b>Module:4</b>	<b>Design And Analyses Of Combinational Circuit</b>	<b>9 hours</b>		
Binary Parallel Adder, Magnitude Comparator, Decoders, Encoders, Multiplexers, De-multiplexers.				
<b>Module:5</b>	<b>Sequential Circuits</b>	<b>7 hours</b>		
Flip Flops, Conversion of Flip flops, Design and Analysis of Sequential circuits				
<b>Module:6</b>	<b>Design of Registers and Counters</b>	<b>6 hours</b>		
Registers, Shift Registers, Bi-directional shift registers, Counters, Ripple and Synchronous Counters, Ring and Johnson counters.				
<b>Module:7</b>	<b>Arithmetic Logic Unit</b>	<b>6 hours</b>		
Bus Organization, ALU, Design of ALU, Status Register, Design of Shifter.				
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>		
<b>Total Lecture hours:</b>				<b>45 hours</b>
<b>Text Book</b>

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar	
<b>List of Indicative Experiments</b>	
1.	Realization of Logic gates using discrete components, verification of truth table for logic gates, realization of basic gates using NAND and NOR gates
2.	Implementation of Logic Circuits by verification of Boolean laws and verification of De Morgans.
3.	Adder and Subtractor circuit realization by implementation of Half-Adder and Full-Adder, and by implementation of Half-Subtractor and Full-Subtractor.
4.	Combinational circuit design <ul style="list-style-type: none"> <li>i. Design of Decoder and Encoder</li> <li>ii. Design of Multiplexer and De multiplexer</li> <li>iii. Design of Magnitude Comparator</li> <li>iv. Design of Code Converter</li> </ul>
5.	Sequential circuit design <ul style="list-style-type: none"> <li>i. Design of Mealy and Moore circuit</li> <li>ii. Implementation of Shift registers</li> <li>iii. Design of 4-bit Counter</li> <li>iv. Design of Ring Counter.</li> </ul>
6.	Implementation of different circuits to solve real world problems: A digitally controlled locker works based on a control switch and two keys which are entered by the user. Each key has a 2-bit binary representation. If the control switch is pressed, the locking system will pass the difference of two keys into the controller unit. Otherwise, the locking system will pass the sum of the two numbers to the controller unit. Design a circuit to determine the input to the controller unit.
7.	Implementation of different circuits to solve real world problems: A bank queuing system has a capacity of 5 customers which serves on first come first served basis. A display unit is used to display the number of customers waiting in the queue. Whenever a customer leaves the queue, the count is reduced by one and the count is increased by one if a customer joins a queue. Two sensors (control signals) are used to sense customers leaving and joining the queue respectively. Design a circuit that displays the number of customers waiting in the queue in binary format using LEDs. Binary 1 is represented by LED glow and 0 otherwise.

		3	0	2	0	4
<b>Pre-requisite</b>	<b>Nil</b>				<b>Syllabus version</b>	
						1.0

**Course Objectives:**

1. To provide the knowledge about linear and non-linear data structures
2. To provide the knowledge about algorithm analyses
3. To focus on the design of algorithms and data structure in various domains
4. To focus on various graph algorithms like shortest path algorithm, minimum spanning tree, etc.,
5. To provide familiarity with main thrusts of work in algorithms – sufficient to give some context for formulating and seeking known solutions to an algorithmic problem

**Course Outcomes:**

Upon completion of the course, the students will be able to

1. Solve real life computing problems by using data structures
2. Select the suitable data structures for storage and management of different types of data.
3. Apply the algorithm design techniques to analyze, solve and evaluate computing problems.
4. Analyze algorithms asymptotically and compute the performance analysis of algorithms with the same functionality.
5. Choose an appropriate design paradigm that solves the given problem efficiently along with appropriate data structures.
6. Solve complexities of problems in various domains

<b>Student Learning Outcomes (SLO):</b>	<b>1, 5, 9</b>	
<b>Module:1   Introduction to Data Structures</b>		<b>5 hours</b>
Introduction to Data Structure, Importance of Data Structure, Types of Data Structures, Arrays, Structures, Union, Pointers, Storage Allocation: Static and Dynamic Allocation.		
<b>Module:2   Analysis of Algorithms</b>		<b>5 hours</b>
Mathematical Background, Asymptotic Notations, Performance of the Algorithms: Time Complexity, Space Complexity, Master's Theorem.		
<b>Module:3   Lists, Stacks and Queues</b>		<b>9 hours</b>
List: Definition, Operations—Implementation, Singly Linked Lists, Doubly Linked Lists, Circular Linked Lists, Stack: Definition, Operations, Implementations, Applications: Recursion, Infix to Postfix and Evaluation of Postfix, Queue: Definition, Operations, Implementations, Applications: Circular Queue and Priority Queue.		
<b>Module:4   Trees</b>		<b>6 hours</b>
Definition, Terminology, Binary Tree: Binary Tree Representation, Binary Search Tree, Binary Tree Traversal – Expression Tree, Finding K <sub>th</sub> element in Binary Tree, Tree to Binary tree conversion, Tree Traversal.		
<b>Module:5   Hashing and Heaps</b>		<b>6 hours</b>
Hashing: General Idea, Hash Function, Hash Table, Collision in Hashing: Separate Chaining and Open Addressing- Rehashing. Heaps: Definition, Basic Operations, Min heap and Max heap Construction, Heap Sort.		
<b>Module:6   Sorting</b>		<b>5 hours</b>
Preliminaries, Insertion Sort, Bubble Sort, Selection Sort, Shell Sort, Merge Sort, Quick Sort, Radix Sort		

<b>Module:7</b>	<b>Graph Algorithms</b>	<b>7 hours</b>
Types of Graphs, Graph Representation, Shortest Path Algorithm: Dijikstra's Algorithm, FloydWarshal's Algorithms, Graph Traversal, Minimum Spanning Tree		
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
	<b>Total Lecture hours:</b>	<b>45 hours</b>

<b>Student Learning Outcomes (SLO):</b>		1,5,14											
<b>Module:1</b>	<b>Algorithm Design Techniques</b>	<b>5 hours</b>											
Revisit of Greedy algorithms, divide-conquer, dynamic programming. Backtracking: General method, N-queen problem, Subset sum, Graph coloring, Hamiltonian cycles. Branch and Bound: General method, applications - Traveling sales person problem, 0/1 knapsack problem- LC Branch and Bound solution, FIFO Branch and Bound solution.													
<b>Module:2</b>	<b>Network Flow</b>	<b>4 hours</b>											
Flow Networks, Networks with multiple sources and sinks, Floyd-Warshall algorithm, Max Flow and Min Cut, Ford-Fulkerson Method and Edmonds-Karp Algorithm, Bipartite Matching.													
<b>Module:3</b>	<b>Computational Complexity</b>	<b>5 hours</b>											
Class complexity classes: P, NP, Reductions, NP-completeness and NP hard , NP-Complete Problems, CNF-SAT and 3SAT, Vertex-Cover and Clique													
<b>Module:4</b>	<b>Randomized Algorithms</b>	<b>3 hours</b>											
Las Vegas algorithms, Randomized Quick Sort, Monte Carlo algorithm, Primality Testing													
<b>Module:5</b>	<b>Approximation Algorithms</b>	<b>4 hours</b>											
Limits to Approximability, Bin Packing (First fit, Best fit),2 – Approximation algorithm for Metric TSP, Euclidean TSP, Max-SAT and Vertex Cover													
<b>Module:6</b>	<b>Computational Geometry</b>	<b>4 hours</b>											
Segment-intersection algorithm, Algorithms for finding convex hull: Graham's scan, Gift wrapping Algorithm. Finding the closest pair of points.													
<b>Module:7</b>	<b>Algorithms for AI</b>	<b>3 hours</b>											
Uninformed search, Heuristic search (8 queen and tiling problems), A* and AO* algorithms.													
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
<b>List of Experiments</b>		
1.	Implementation of algorithms for problems that can be solved by one or more of the following strategies: Divide and Conquer, Brute force, Greedy, Dynamic Programming. Branch-and-Bound algorithm for the 0-1 Knapsack problem to maximize the profit for a given problem instance.	6 hours
2.	Implementation of Graham's scan and Gift wrapping algorithms. In addition to that, using the implementation compare the running time of both the algorithms empirically by taking large input size range. Finally, compare empirical analysis and theoretical time complexity of both the algorithms.	4 hours
3.	Implementation of Ford-Fulkerson algorithm for computing a maximum flow in a network.	2 hours
4.	Randomized Algorithms: Las Vegas and Monte Carlo algorithms	2 hours
5.	Implementation of solution techniques for the minimum-cost flow problem.	2 hours
6	Heuristic search and A*, AO* algorithms	2 hours
7	Implementation of algorithms for Bin Packing, TSP, Vertex cover	4 hours
8	Implementation of search algorithms for graphs and trees: fundamental algorithms, Floyd Washall algorithm, Ford-Fulkerson Method and Edmonds-Karp Algorithm	6 hours
9	A simple polygon is defined as a flat shape consisting of straight non-intersecting line segments or sides that are joined pair –wise to from a closed path. Let P {p <sub>1</sub> , p <sub>2</sub> , p <sub>3</sub> ,...p <sub>n</sub> } be a set of points in the two dimensional plane. a. Write a program to find the simple polygon of P . b. Write a program (linear time) to convert that the simple polygon of P to a Convex Hull.	2 hours

**Course Objectives:**

1. To design conceptual and physical database tuning
2. To comprehend the concepts of parallel, distributed, multimedia and spatial database
3. To learn the concepts of mobile and cloud database
4. To understand the concepts of security and emerging technologies in database.

**Course Outcome:**

1. Acquire the concept of physical database design and tuning
2. Learn the concept of parallel and distributed database
3. Obtain the knowledge of multimedia and spatial database
4. Apply the concepts of mobile and cloud database in realtime applications
5. Distinguish various emerging database technologies and Analyze various security issues in databases

**Student Learning Outcomes (SLO):**      **1, 5, 7**

<b>Module:1</b>	<b>Database Design Techniques</b>	<b>5 hours</b>
-----------------	-----------------------------------	----------------

Review of DBMS Techniques – EER – Physical database design and tuning – Advanced transaction processing and Query processing

<b>Module:2</b>	<b>Parallel Databases</b>	<b>6 hours</b>
-----------------	---------------------------	----------------

Architecture, Data partitioning strategy, Interquery and Intraquery Parallelism –Parallel query optimization

<b>Module:3</b>	<b>Distributed Databases</b>	<b>7 hours</b>
-----------------	------------------------------	----------------

Structure of distributed database, Advantages, Functions, Distributed database architecture, Allocation, Fragmentation, Replication, Distributed query processing, Distributed transaction processing, Concurrency control and Recovery in distributed database systems.

<b>Module:4</b>	<b>Multimedia and Spatial Databases</b>	<b>7 hours</b>
-----------------	---	----------------

Multimedia sources, issues, Multimedia database applications Multimedia database queries-LOB in SQL. Spatial databases -Type of spatial data– Indexing in spatial databases.

<b>Module:5</b>	<b>Mobile and Cloud Databases</b>	<b>8 hours</b>
-----------------	-----------------------------------	----------------

Wireless network communication, Location and handoff management, Data processing and mobility, Transaction management in mobile database systems, Database options in the cloud, Changing role of the DBA in the cloud, Moving your databases to the cloud

<b>Module:6</b>	<b>Emerging Database Technologies</b>	<b>5 hours</b>
-----------------	---------------------------------------	----------------

Active database – Detective database- Object database - Temporal database - Streaming databases

<b>Module:7</b>	<b>Database Security</b>	<b>5 hours</b>
-----------------	--------------------------	----------------

Introduction to Database Security Issues –Security Models – Different Threats to databases – Counter measures to deal with these problems

<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
	<b>Total Lecture hours:</b>	<b>45 hours</b>

<b>CSI2005</b>	<b>Principles of Compiler Design</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>					
		3	0	0	0	3					
<b>Pre-requisite</b>	Nil	<b>Syllabus version</b>									
		<b>1.0</b>									
<b>Course Objectives:</b>											
1. To provide foundation for study of high performance compiler design. 2. To make students familiar with lexical analysis and semantic analysis. 3. To understand the principles of code optimization techniques.											
<b>Course Outcome:</b>											
1. Demonstrate the functioning of a Compiler and to develop a firm and enlightened grasp of concepts such as higher level programming, assemblers, automata theory, and formal languages, language specifications. 2. Develop language specifications using context free grammars (CFG). 3. Apply the ideas, the techniques, and the knowledge acquired for the purpose of developing software systems. 4. Construct symbol tables and generating intermediate code. 5. Obtain insights on compiler optimization											
<b>Student Learning Outcomes (SLO):</b> <b>1,2,5</b>											
<b>Module:1</b>	<b>Introduction to Compilation and Lexcial Analysis</b>	<b>7 hours</b>									
Introduction to programming language translators-Structure and phases of a compiler-Design issues- Patterns- lexemes-Tokens-Attributes-Specification of Tokens- Extended Regular expression, Regular expression to Deterministic Finite Automata (Direct method).											
<b>Module:2</b>	<b>Syntax Analysis –Top Down</b>	<b>5 hours</b>									
Role of parser- Parse Tree - Elimination of ambiguity - Top down parsing - Recursive Descent parsing - Non Recursive Descent parsing - Predictive Parsing - LL(1) grammars.											
<b>Module:3</b>	<b>Syntax Analysis –Bottom Up</b>	<b>7 hours</b>									
Shift Reduce Parsers- Operator Precedence Parsing ,LR parsers:-Construction of SLR parser tables and parsing , CLR parsing-LALR parsing											
<b>Module:4</b>	<b>Semantics Analysis</b>	<b>6 hours</b>									
Syntax Directed Definition – Evaluation Order - Applications of Syntax Directed Translation - Syntax Directed Translation Schemes - Implementation of L attributed Syntax Directed Definition.											
<b>Module:5</b>	<b>Intermediate Code Generation</b>	<b>7 hours</b>									
Variants of syntax trees - Three address code- Types – Declarations - Procedures - Assignment Statements - Translation of Expressions - Control Flow - Back Patching- Switch Case Statements.											
<b>Module:6</b>	<b>Code Optimization</b>	<b>6 hours</b>									
Loop optimizations- Principal sources of optimization -Introduction to Data Flow Analysis - Basic Blocks - The DAG Representation of Basic Blocks -Loops in Flow Graphs.											
<b>Module:7</b>	<b>Code Generation &amp; Other Translations Issues</b>	<b>5 hours</b>									
Issues in the design of a code generator- Target Machine- Next-Use Information - Optimization of basic blocks - Peephole Optimization - Register Allocation and Assignment.

<b>CSI2006</b>	<b>Microprocessor and Interfacing Techniques</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		2	0	2	0	3
<b>Pre-requisite</b>	Nil				<b>Syllabus version</b>	
						<b>1.0</b>
<b>Course Objectives:</b>						
<ol style="list-style-type: none"> <li>1. To acquaint students with basic concepts of block diagram, architecture, pin diagram, addressing modes and instruction set of an 8086/ARM microprocessor.</li> <li>2. To teach students syntax and semantics of assembly language programming and its constructs. To facilitate students to practice sample assembly programs and develop logic for other operations.</li> <li>3. To explore special architectural features and various peripheral IC's for designing a typical computing system.</li> <li>4. To understand the need for numeric co-processor. Also develop skill on open source prototyping boards for developing any smart systems for contemporary issues.</li> </ol>						
<b>Course Outcome:</b>						
At the end of this course, students will be able to						
<ol style="list-style-type: none"> <li>1. Explain the design aspects of a typical microprocessor and illustrate its capabilities.</li> <li>2. Practice and emulate assembly programs. To develop logic at assembly level for various operations.</li> <li>3. Understand need for and working of Stack, Interrupt Service Routines (ISRs) and Procedures. Practice assembly programs for file handling and other operations using ISR.</li> <li>4. Illustrate interfacing of basic devices viz. memory, IO, data converters and motors.</li> <li>5. Illustrate interfacing of special purpose programmable devices viz. timer/counter, interrupt controller, display controller, communication and direct memory access.</li> <li>6. Explain the design aspects of numeric co-processor and illustrate its capabilities with sample assembly programs.</li> <li>7. Explore open source prototyping board, sample sensors and actuators and develop smart solutions for socio-economic issues.</li> </ol>						
<b>Student Learning Outcomes (SLO):</b> <b>2,5,9</b>						
<b>Module:1</b>	<b>Intel x86/ARM Processors</b>	<b>5 hours</b>				
Architecture and Signal Description, Register and Memory Organization, General Bus Operations and IO Addressing Capability, Special Processor Activities, Min and Max Modes, Reduced-Instruction-Set Computing(RISC)						
<b>Module:2</b>	<b>Assembly Language Programming and Tools</b>	<b>5 hours</b>				
Addressing modes and Instruction Set, Assembler Directives and Operators, Introduction to emu8086 emulator and MASM assembler, Assembly Language example programs.						
<b>Module:3</b>	<b>Special Architectural Features and Programming</b>	<b>3 hours</b>				
Stack – stack structure of 8086/ARM and programming; Interrupt – interrupt cycle, non-maskable, mask- able, Interrupt Service Routine, programming; procedure and macro– definition and passing parameters; handling larger programs; timing and delays – clock cycle, states, instruction execution time, clock count for generating delays; file management – create, open, close, read, write and delete operations;						
<b>Module:4</b>	<b>Basic Peripherals Interfacing</b>	<b>4 hours</b>				
Memory Interfacing – Interleaving, static and dynamic RAM interfacing; IO Ports Interfacing – memory mapped I/O, I/O mapped I/O; PIO 8255 – architecture, pin, control word register, operation modes; A/D Interfacing – 0808 SAR, 7109 dual-slope, interfacing; D/A – 7523, DAC0800; Stepper Motor – 4 winding internal schematic, excitation sequence, sample programs.						
<b>Module:5</b>	<b>Special Purpose Programmable Peripheral Interfacing</b>	<b>5 hours</b>				
Timer/Counter 8253 – architecture, pin, control word register, operation modes, programming; PIC-8259 – architecture, pin, interrupt sequence, command words, operation modes,						

programming; 8279 – architecture, pin, operation modes, programming; 8251 – communication methods, architecture, pin, operation modes, programming; 8257 – architecture, pin, DMA transfers and operations, programming.		
<b>Module:6</b>	<b>Numeric Co-Processor 8087</b>	<b>4 hours</b>
Overview, compatible processor and coprocessor, pin, architecture, block diagram - control unit, numeric execution unit, registers, status word, circuit connection of 8086-8087,data types, IEEE floating point standard, instruction set, sample programs.		
<b>Module:7 Case Study on Microcontroller Boards</b>		
Introduction to Microcontroller, UNO Board, IDE, Programming using GPIO for LED, LCD, Keypad, Motor, Sensor interfacing, case study on smart system design.		
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
	<b>Total Lecture hours</b>	<b>30 hours</b>
<b>Text Book(s)</b>		
1.	A.K. Ray and K.M. Bhurchandi Advanced Microprocessors and Peripherals, 3rd Edition, Tata McGraw Hill, 2017.	
2.	Barry B Bray , The Intel Microprocessor 8086/8088, 80186,80286, 80386 and 80486 Architecture, programming and interfacing, 8th Edition ,PHI, , 2011	
<b>Reference Book(s)</b>		
1.	Douglas V. Hall, SSSP Rao” Microprocessors and Interfacing Programming and Hardware”. Third edition, Tata McGraw Hill, 2017.	
2.	Mohamed Rafiquazzaman, “Microprocessor and Microcomputer based system design,” Second edition, Universal Book stall, 1995	
3.	K Uday Kumar, B S Umashankar, Advanced Micro processors & IBM-PC Assembly Language Programming, Tata McGraw Hill, 2017.	
<b>Mode of Evaluation:</b> CAT / Assignment / Quiz / FAT / Project / Seminar		
<b>List of Experiments</b>		
1.	Arithmetic operations 8/16 bit using different addressing modes.	2 hours
2.	Finding the factorial of an 8 /16 bit number	1 hour
3.	(a) Solving nCr and nPr (b) Compute nCr and nPr using recursive procedure. Assume that ‘n’ and ‘r’ are non-negative integers.	2 hours
4.	Fibonacci series	1 hours
5.	Sorting in ascending and descending order	2 hours
6.	(a) Search a given number or a word in an array of given numbers. (b) Search a key element in a list of „n“ 16-bit numbers using the Binary search algorithm.	2 hours
7.	To find the smallest and biggest numbers in a given array.	2 hours
8.	ALP for number bases conversions	2 hours
9.	String operations (String length, reverse, comparison, concatenation, palindrome)	2 hours
10.	Password checking	2 hours
11.	Convert a 16-bit binary value (assumed to be an unsigned integer) to BCD and display it from left to right and right to left for specified number of times	2 hours
12.	Read the current time from the system and display it in the standard format on the screen.	2 hours
13.	Program to simulate a Decimal Up-counter to display 00-99.	2 hours
14.	Read a pair of input co-ordinates in BCD and move the cursor to the specified location on the screen.	2 hours
15.	Stepper motor interface using 8086/ Intel Galileo Board	2 hours

16.	Seven segment LED DISPLAY using 8086/Intel Arduino Board	2 hours
	Total Laboratory Hours	<b>30 hours</b>
Mode of evaluation: CAT/FAT/Assignment

		3	0	2	0	4					
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>									
		1.0									
<b>Course Objectives:</b>											
<p>1. Build an understanding of the fundamental concepts of computer networking, protocols, architectures, and applications</p> <p>2. Gain expertise in design, implement and analyze performance perspective of TCP/IP layered Architecture</p> <p>3. Deal with the major issues of the layers of the model.</p>											
<b>Course Outcomes:</b>											
<p>1. Describe the layered structure of a typical networked architecture</p> <p>2. Identify and analyze the different types of network topologies, error and flow control mechanisms</p> <p>3. Design sub-netting and enhance the performance of routing mechanisms.</p> <p>4. Compare various congestion control mechanisms and identify suitable Transport layer protocol for real time applications</p> <p>5. Identify various Application layer protocols for specific applications</p> <p>6. Design and Implement various Network protocols</p>											
<b>Student Learning Outcomes (SLO):</b>		2,5,6									
<b>Module:1</b>	<b>Basics of Data Communication and Computer Network</b>	<b>5 hours</b>									
Definition and Uses of Computer Network, Criteria for a Data Communication Network, Components of Data Communication, Classification of Computer network, Network Topology, Network Models: OSI, TCP/IP- Networking Devices: Hubs, Bridges, Switches, Routers, and Gateways – Performance Metrics – Introduction to Sockets – Port numbers in Socket Programming											
<b>Module:2</b>	<b>Physical Layer</b>	<b>5 hours</b>									
Transmission Impairments, Transmission Medium, Data Encoding: Line Encoding, Types of Line Coding, Analog-to-Digital Conversion- Pulse code modulation (PCM), Delta modulation (DM); Transmission Modes- Half and Full Duplex- Signals – Bandwidth and Data Rate – Multiplexing – Shift Keying											
<b>Module:3</b>	<b>Data Link Layer</b>	<b>9 hours</b>									
Error Detection and Correction- One and two dimensional parity checks, Hamming code, Cyclic redundancy check (CRC); Flow Control: Protocols: Protocols for Noiseless Channels and Noisy Channels – Ethernet- Access Control Protocols: CSMA,CSMA/CA,CSMA/CD, Token Ring- Token Passing, TDMA, FDMA, CDMA- Virtual LAN- Wireless LAN (802.11).											
<b>Module:4</b>	<b>Network Layer</b>	<b>8 hours</b>									
IP Addressing Scheme, Subnet Addressing, Subnet Masks, IPV4 Addressing, IPV6 Addressing, Address Resolution Protocol (ARP), Reverse Address Resolution Protocol (RARP). Unicast Routing: Routing Characteristics, Routing Algorithms: Distance Vector Routing Protocol, Link State Routing Protocol – Multicast Routing- Wireless Routing											
<b>Module:5</b>	<b>Transport Layer</b>	<b>6 hours</b>									
Services of Transport Layer, Socket Programming, TCP Phases, Transport Layer Protocols: TCP, UDP, SCTP, RTP, Transport Layer Security Protocols : SSL, TLS											
<b>Module:6</b>	<b>Traffic Engineering Principles</b>	<b>4 hours</b>									
Congestion Control Algorithms- Congestion prevention policies; Quality of Service- Traffic shaping, Leaky bucket algorithm, Token bucket algorithm; Integrated Services.											

<b>Module:7</b>	<b>Application Layer</b>	<b>6 hours</b>
Simple Mail Transfer Protocol (SMTP), File Transfer Protocol (FTP), TELNET,SNMP,DNS, Hypertext Transfer Protocol (HTTP), World Wide Web (WWW), Security in Internet, E-mail Security.		
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
	<b>Total Lecture hours:</b>	<b>45 hours</b>
<b>Text Book(s)</b>

<b>CSI2008</b>	<b>Programming in Java</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		3	0	2	0	4
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>				
		1.0				

**Course Objectives:**

1. Understand Object Oriented Programming & Functional Programming in Java, Handling Exceptions and Multithreading.
2. Able to perform File Handling, Manipulating Strings, Generic Programming.
3. Use of Java for Event Handling and Web applications using Servlets.

**Course Outcome:**

At the end of this course students should be able to:

1. Analyze the programs involving the fundamental program constructs.
2. Choose the appropriate OOP technique for solving the real world problem.
3. Demonstrate exception handling and use of threads in Java.
4. Propose the use of Generic programming and file handling for different scenarios.
5. Explore various methods for manipulating strings and several collections.
6. Choose appropriate elements to facilitate event handling and GUI programming.
7. Design and develop web applications using Servlets with JDBC.

**Student Learning Outcomes (SLO):**      **1, 9, 14**

<b>Module:1</b>	<b>Introduction to Java Programming</b>	<b>4 hours</b>
-----------------	---	----------------

Overview of Java Language: Introduction, Java Virtual Machine, program structure, Java tokens, statements, variables, scope of variables and data types. Arrays: One-Dimensional arrays, Multidimensional Arrays.

<b>Module:2</b>	<b>Object, Class and Packages</b>	<b>7 hours</b>
-----------------	-----------------------------------	----------------

Object Oriented Programming and Java – Classes – Objects – Methods – Constructors – this keyword – Garbage collection – Overloading methods – Objects as parameters and returning objects – Nested and Inner classes – static and final keywords – Inheritance: Basics, Using super, Class hierarchy, Method overriding, Abstract classes – The Object Class – Packages and Interfaces.

<b>Module:3</b>	<b>Exceptions and Threads</b>	<b>7 hours</b>
-----------------	-------------------------------	----------------

Exception Handling: Fundamentals, Types, Uncaught Exceptions, Using try and catch, Multiple catch clauses, Nested try, Built-in Exceptions, Creating your own exception subclasses.

Threads: Java thread model, Main thread, Creating a thread, Creating multiple threads, Thread priorities, Synchronization, Inter thread communication, Thread's states, Multithreading.

<b>Module:4</b>	<b>Files and Generics</b>	<b>6 hours</b>
-----------------	---------------------------	----------------

I/O streams – Console I/O – The PrintWriter class – Reading and Writing files. Generics: Basics, A Generic class, General form, Using wildcard arguments, Generic methods, Generic Interfaces, Generic Class hierarchy, Type inference.

<b>Module:5</b>	<b>Lambda Expressions and Strings</b>	<b>6 hours</b>
-----------------	---------------------------------------	----------------

Lambda Expressions: Introduction, Block Lambda expressions, Passing Lambda expressions as arguments, Lambda Expressions and Exceptions.

String Handling: The String Constructors, Various String Operations, String Buffer and String Builder Classes.

<b>Module:6</b>	<b>Java Event Handling and GUI Programming</b>	<b>6 hours</b>
-----------------	--	----------------

Event Handling mechanism, Event Delegation, Event and KeyEvent Classes, Event Listener Interfaces. GUI Programming with JavaFX: UI Controls, Layout Classes, Collection Classes, Media Classes.

<b>Module:7</b>	<b>Java Servlets and JDBC</b>	<b>7 hours</b>
-----------------	-------------------------------	----------------

Background - Lifecycle of a servlet – Development – The Servlet API – The javax.servlet package – Reading Servlet Parameters - Handling http requests and responses – Using Cookies –

Session Tracking – JDBC-Servlets with JDBC		
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
	<b>Total Lecture hours:</b>	<b>45 hours</b>
<b>Text Book(s)</b>		
1.	Herbert Schildt, "Java: The Complete Reference", , 11 <sup>th</sup> Edition., McGraw-Hill Publishers December 2018.

<b>CSI3001</b>	<b>Cloud Computing Methodologies</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>					
		3	0	2	0	4					
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version 1.0</b>									
<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To introduce the concept of Virtualization and cloud computing</li> <li>2. To provide students a sound foundation of the Cloud Computing enabling them to start using and adopting Cloud Computing services and tools in their real life scenarios</li> <li>3. To enable students explore some important cloud computing driven commercial systems such as Google Apps, Microsoft Azure and Amazon Web Services and other businesses cloud applications.</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. Analyze and study the basics of cloud computing, cloud models and its applications</li> <li>2. Appreciate the requirements of various service paradigms in Cloud Computing</li> <li>3. Analyze, identify and select suitable type of virtualization</li> <li>4. An ability to use techniques, tools, skills in a secured cloud environment</li> <li>5. Design, implement and evaluate a cloud-based system, process, component, or program to meet desired needs</li> </ol>											
<b>Student Learning Outcomes (SLO):</b> <b>5,9,17</b>											
<b>Module:1</b>	<b>Introduction</b>	<b>5 hours</b>									
Overview of Computing Paradigm, Cloud Computing- NIST Cloud Computing Reference Architecture, Types of Cloud Deployment Models - Private, Public, Hybrid, Agency Clouds											
<b>Module:2</b>	<b>Cloud Service Models</b>	<b>5 hours</b>									
Infrastructure as a Service(IaaS), Platform as a Service(PaaS), Software as a Service(SaaS), Anything as a Service(XaaS)											
<b>Module:3</b>	<b>Virtualization</b>	<b>7 hours</b>									
Need for Virtualization – Pros and cons of Virtualization, Types - Implementation Levels – CPU, Memory, I/O Devices, Virtual Clusters and Resource management											
<b>Module:4</b>	<b>Cloud Environments</b>	<b>7 hours</b>									
Cloud Environments - Case study: One cloud service provider per service model (eg. Amazon EC2, Google App Engine, Sales Force, Microsoft Azure, Open Source tools)											
<b>Module:5</b>	<b>Cloud Application Development</b>	<b>8 hours</b>									
Cloud application development using third party APIs, Working with EC2 API – Google App Engine API - Facebook API, Twitter API , HDFS, Map Reduce Programming Model.											
<b>Module:6</b>	<b>Security</b>	<b>7 hours</b>									
Cloud Security Challenges and Risks – Software-as-a- Service Security – Security Governance – Risk Management – Security Monitoring – Security Architecture Design – Data Security – Application Security – Virtual Machine Security											
<b>Module:7</b>	<b>Advances in Cloud</b>	<b>4 hours</b>									
MQTT in Cloud, MQTT working example – Fog Computing basics – Comparing Cloud, Fog and Mist Computing											
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>

<b>CSI3002</b>	<b>Applied Cryptography and Network Security</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>					
		2	0	2	0	3					
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>									
						1.0					
<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To learn the emerging concepts of cryptography and algorithms</li> <li>2. To defend the security attacks on information systems using secure algorithms and Authentication process</li> <li>3. To categorize and analyze the key concepts in network and wireless security</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. Infer the need of security to introduced strong cryptosystems.</li> <li>2. Analyze the cryptographic algorithms for information security.</li> <li>3. Identify the authentication schemes for membership authorization.</li> <li>4. Identify computer and network security threats, classify the threats and develop a security model for detect and mitigate the attacks.</li> <li>5. Identify the requirements for secure communication and challenges related to the secure web services</li> <li>6. Identify the need of ethical and professional practices, risk management using emerging security solutions.</li> </ol>											
<b>Student Learning Outcomes (SLO):</b> <b>1, 9, 18</b>											
<b>Module:1</b>	<b>Introduction to Cryptography</b>	<b>4 hours</b>									
Security trends, Security attacks, Security mechanism, Elementary number theory, Pseudo-random bit generation. <b>Basic security services:</b> confidentiality, integrity, availability, non-repudiation, privacy.											
<b>Module:2</b>	<b>Symmetric Key Cryptography</b>	<b>4 hours</b>									
Block Ciphers: DES, Triple-DES, AES, Modes of Operation, Stream Cipher											
<b>Module:3</b>	<b>Asymmetric Key Cryptography</b>	<b>4 hours</b>									
RSA, Elgamal, Elliptic Curve Cryptography (ECC), Diffie-Hellman key exchange protocol											
<b>Module:4</b>	<b>Hash Functions and Authentication</b>	<b>4 hours</b>									
Message Authentication Code (MAC), MD5, Secure Hash algorithms (SHA), HMAC, Digital Signatures, Digital Signature Standard (DSS).											
<b>Module:5</b>	<b>Basic Applied Cryptography</b>	<b>3 hours</b>									
Key management and distribution, digital certificates, identity-based encryption, Identification and authentication, zero knowledge protocols											
<b>Module:6</b>	<b>Advanced Applied cryptography</b>	<b>5 hours</b>									
Side-channel attack, Pretty Good Privacy (PGP), S/MIME, Kerberos, Homomorphic encryption, Quantum Cryptography, DNA Cryptography, Chaos Based Cryptosystem											
<b>Module:7</b>	<b>Web and Wireless Security</b>	<b>4 hours</b>									
IPsec: AH and ESP, IKE- SSL/TLS, Types of Firewalls, Intrusion detection and Prevention systems, Wireless Application Protocol (WAP)											
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>									
<b>Total Hours:</b>											
<b>30 hours</b>											
<b>List of Experiments</b>											
1	Implement DES, Triple DES and AES Key Algorithms	<b>4 Hours</b>									
2	Implement RSA, ECC and Diffie-Hellman Key Establishment.	<b>4 Hours</b>									
3	Implement a Secret-Sharing algorithm and Homomorphic Encryption algorithm	<b>2 Hours</b>									
4	Implement message authentication (MAC) and HASH algorithms	<b>3 Hours</b>									
5	Consider and examine the Wireless network security and technology	<b>2 Hours</b>									

	integration for compliance using the case study of Cisco.	
6	Explore the Snort Intrusion Detection Systems. Study Snort IDS, a signature-based intrusion detection system used to detect network attacks. Snort can also be used as a simple packet logger. For the purpose of this lab the students will use snort as a packet sniffer and write their own IDS rules	<b>4 Hours</b>
7	Explore ways to perform wireless attacks and understand potential defences. The attacks that will be covered are inspecting & modifying wireless card parameters, changing the wireless transmission channel, flooding attacks, and cracking keys of WPA2 protected networks.	<b>4 Hours</b>
8	Pretty Good Privacy – <ul style="list-style-type: none"> <li>• Create a public/private key pair in PGP</li> <li>• Create a revocation ley</li> <li>• Exchange PGP keys with other students</li> <li>• Signing the new key</li> <li>• Encrypting a file using your partner's public key</li> <li>• Decrypting the file using your private key</li> <li>• Encrypting and signing a file</li> <li>• Verifying the signature</li> <li>• Sending secure Email with PGP</li> <li>• Adding a public key and sending secure email.</li> </ul>	<b>4 Hours</b>
9	Send and receive an encrypted email message using S/MIME.	<b>3 Hours</b>

**Total Lecture hours:** **30 hours**

		3	0	0	0	3
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>				
		1.0				

#### **Course Objectives:**

1. Ability to understand Artificial Intelligence principles and techniques
2. Introduce the facts and concepts of Expert system by computational model and their applications
3. Explore the knowledge using problem solving, search methodologies and learning algorithms.

#### **Course Outcome:**

On completion of this course the students will be able to

1. Evaluate Artificial Intelligence (AI) methods and describe their foundations.
2. Apply basic principles of AI in solutions that require problem solving, inference, perception, knowledge representation and learning.
3. Analyze and illustrate how search algorithms play vital role in problem solving
4. Demonstrate knowledge of reasoning and knowledge representation for solving real world problems
5. Understand and Illustrate the construction of expert system
6. Discuss current scope and limitations of AI and societal implications.

#### **Student Learning Outcomes (SLO):**      | **1, 7, 17**

<b>Module:1</b>	<b>Introduction to Artificial Intelligence</b>	<b>5 hours</b>
-----------------	--	----------------

Overview of Artificial Intelligence –History of AI – Agents and environment – concept of rationality - Classification of AI systems with respect to environment.

<b>Module:2</b>	<b>Problem solving</b>	<b>6 hours</b>
-----------------	------------------------	----------------

Solving problems by searching - Problem space - State space - searching for solutions - uninformed search strategies.

<b>Module:3</b>	<b>Heuristic Search Strategies</b>	<b>6 hours</b>
-----------------	------------------------------------	----------------

Informed search strategies – Games: mini-max algorithm, Alpha-Beta Pruning

<b>Module:4</b>	<b>Logical Agents</b>	<b>8 hours</b>
-----------------	-----------------------	----------------

Knowledge-Based Agents - Wumpus World - Propositional Logic – Constraints, Predicate Logic – First Order Logic - Inference in First Order Logic

<b>Module:5</b>	<b>Planning Agents</b>	<b>8 hours</b>
-----------------	------------------------	----------------

Situational Calculus - Representation of Planning - Partial order Planning- Practical Planners – Conditional Planning - Replanning Agents

<b>Module:6</b>	<b>Knowledge Reasoning</b>	<b>5 hours</b>
-----------------	----------------------------	----------------

Uncertainty - Bayes Rule – Inference-Hidden Markov Model- Belief Network, Decision Network

<b>Module:7</b>	<b>Design of Expert System</b>	<b>5 hours</b>
-----------------	--------------------------------	----------------

Architecture of expert systems - Stages in the development of an Expert Systems - Roles of expert systems – Expert System Tools-Difficulties in Developing Expert Systems- Knowledge Acquisition and elicitation - Meta knowledge - Typical expert systems – MYCIN

<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
-----------------	----------------------	----------------

**Total hours:**      | **45 hours**

		2	0	2	0	3					
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				<b>1.0</b>					
<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To provide necessary knowledge on data manipulation and to perform analysis on the practical problems using statistical and machine learning approach</li> <li>2. To generate report and visualize the results in graphical form using programming tool</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. Ability to gain basic knowledge on data science</li> <li>2. Gain the insights from the data through statistical inferences</li> <li>3. Develop suitable models using machine learning techniques and to analyze its performance</li> <li>4. Analyze on the performance of the model and the quality of the results</li> <li>5. R tool for data Analysis and visualize the results</li> <li>6. Demonstrate problem solving skills and provide solutions to real world problems</li> </ol>											
<b>Student Learning Outcomes (SLO):</b>		<b>1, 5, 14</b>									
<b>Module:1</b>	<b>Introduction</b>	<b>3 hours</b>									
Data Science: Basics – Digital Universe – Sources of Data – Information Commons – Data Science Project Life Cycle: OSEMN Framework											
<b>Module:2</b>	<b>Probabilistic Theory</b>	<b>4 hours</b>									
Probability Theory – Introduction – Conditional Probability – Bayes Rule – Gaussian Distribution – Inference of Gaussian											
<b>Module:3</b>	<b>Classification and Clustering</b>	<b>5 hours</b>									
Introduction to machine learning: Supervised, Unsupervised Learning – Regression: Linear Regression and Logistic Regression -- Classification Methods: K Nearest Neighbors, Naïve Bayes, Decision Trees - Clustering: k means, Hierarchical clustering											
<b>Module:4</b>	<b>Handling Data Using R</b>	<b>4 hours</b>									
R Objects, variables, datatypes, matrices, list, Control Structures, Functions, Data Frames, Reading and Writing Data File, Model Building											
<b>Module:5</b>	<b>Data Visualization in R</b>	<b>4 hours</b>									
ggplot-univariate, bivariate, multivariate graph – time dependent graph – statistical models – histogram – box plot – heat map - scatter plot – legends – labeling											
<b>Module:6</b>	<b>Performance Evaluation</b>	<b>4 hours</b>									
Model Evaluation Techniques: Hold out, cross validation - Prediction Errors: Type I, Type II - Loss Function and Error: Mean Squared Error, Root Mean Squared Error – Model Selection and Evaluation criteria: Accuracy, F1 score – Sensitivity – Specificity – AUC											
<b>Module:7</b>	<b>Data Analysis Using R – Case Study</b>	<b>4 hours</b>									
Electricity consumption Data Analysis – Analysis of changes in pollution levels – Patient survival Analysis											
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>									
	<b>Total Lecture hours:</b>	<b>30 hours</b>									
<b>Text Book(s)</b>

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
<b>List of Experiments</b>		
1.	House rent prediction using linear regression	3 hours
2.	Medical diagnosis for disease spread pattern	3 hours
3.	Automate email classification and response	2 hours
4.	Customer segmentation in business model based on their demographic, psychographic and behavior data	3 hours
5.	Analysis of tweet and retweet data to identify the spread of fake news	2 hours
6.	Analyze crime data using suitable technique on reported incidents of crime based on time and location	2 hours
7.	Construct a recommendation system based on the customer transaction using Association rule mining	2 hours
8.	Perform analysis on power consumption data to suggest for minimizing the usage	2 hours
9.	Behavioral analysis of customers for any online purchase model	3 hours
10.	Agricultural data analysis for yield prediction and crop selection on Indian terrain data set	3 hours
11.	Develop a recommender system for any real-world problem (when a user queries to find the university that offers Python, the system should display rank wise list of the university based on the review given by the customers)	3 hours
12.	Develop a business model to predict the trend in Investment and Funding	2 hours
<b>Total Laboratory Hours</b>		<b>30 hours</b>

		3	0	2	0	4					
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>			1.0						
<b>Course Objectives:</b>											
<p>1. To understand the various types of data, apply and evaluate the principles of data visualization</p> <p>2. Acquire skills to apply visualization techniques to a problem and its associated dataset</p> <p>3. To apply structured approach to create effective visualizations</p> <p>4. To learn how to bring valuable insight from the massive dataset using visualization</p> <p>5. To learn how to build visualization dashboard to support decision making</p> <p>6. To create interactive visualization for better insight using various visualization tools</p>											
<b>Course Outcome:</b>											
<p>After successfully completing the course the student should be able to</p> <p>1. Identify the different data types, visualization types to bring out the insight.</p> <p>2. Relate the visualization towards the problem based on the dataset to analyze and bring out valuable insight on large dataset.</p> <p>3. Design visualization dashboard to support the decision making on large scale data.</p> <p>4. Demonstrate the analysis of large dataset using various visualization techniques and tools.</p>											
<b>Student Learning Outcomes (SLO):</b>		4, 7, 12									
<b>Module:1</b>	<b>Introduction to Data Visualization and Visualization techniques</b>				<b>6 hours</b>						
Overview of data visualization - Data Abstraction - Task Abstraction - Analysis: Four Levels for Validation. Visualization Techniques -Scalar and point techniques – colour maps – Contouring – Height Plots - Vector visualization techniques – Vector properties – Vector Glyphs – Vector Color Coding											
<b>Module:2</b>	<b>Visual Analytics</b>				<b>5 hours</b>						
Visual Variables- Networks and Trees –Tables - Map Color and Other Channels- Manipulate View											
<b>Module:3</b>	<b>Visualization Tools</b>				<b>6 hours</b>						
Fundamentals of R- Visualization using R library -Introduction to various data visualization tools- tableau											
<b>Module:4</b>	<b>Geo spatial visualization</b>				<b>6 hours</b>						
Geo spatial data and visualization techniques : Chloropleth map, Hexagonal Binning, Dot map, Cluster map, cartogram map											
<b>Module:5</b>	<b>Diverse Types Of Visual Analysis</b>				<b>6 hours</b>						
Time- Series data visualization – Text data visualization – Matrix visualization techniques - Heat Map- Multivariate data visualization and case studies											
<b>Module:6</b>	<b>Visualization of Streaming Data</b>				<b>7 hours</b>						
Introduction to Data Streaming, processing and presenting of streaming data, streaming visualization techniques, streaming analysis.											
<b>Module:7</b>	<b>Visualization Dashboard Creations</b>				<b>7 hours</b>						
Dashboard creation using visualization tools for the use cases: Finance-marketing-insurance-healthcare etc.,											
<b>Module:8</b>	<b>Recent Trends</b>				<b>2 hours</b>						
		<b>Total Lecture hours</b>			<b>45 hours</b>

<b>EEE1024</b>	<b>Fundamentals of Electrical and Electronics Engineering</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>					
		<b>2</b>	<b>0</b>	<b>2</b>	<b>0</b>	<b>3</b>					
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>									
		1.0									
<b>Course Objectives:</b>											
1] To teach the simple problem of DC and AC circuits. 2] To study the important concepts of Analog and digital electronics. 3] To measure and interpret data											
<b>Expected Course Outcome:</b>											
On the completion of this course the student will be able to: 1] Solve simple DC circuits using mesh and nodal analysis. 2] Describe the RLC components with sinusoidal sources. 3] Design of combinational circuits and synthesis of logic circuits 4] Utilize the basic concepts of semiconductor devices and circuits 5] Interpret the architecture of microprocessor & microcontrollers 6] measure the various signals using the sensors 7] Discuss the overview of communication systems. 8] Design and Conduct experiments, as well as analyze and interpret data											
<b>Module:1</b>	<b>Fundamentals of DC circuits:</b>	<b>5 hours</b>									
Basic circuit elements and sources, Ohms law, Kirchhoff's laws, Node voltage analysis, Mesh current analysis, Thevenin's and Maximum power transfer theorem.											
<b>Module:2</b>	<b>Fundamentals of AC Circuits:</b>	<b>4 hours</b>									
Introduction to AC circuits, Steady state AC analysis of a RL, RC, RLC Series circuits, AC power calculations.											
<b>Module:3</b>	<b>Digital Systems:</b>	<b>4 hours</b>									
Number system, Boolean algebra, Logic circuit concepts, Multiplexer, Demultiplexer, Half adder, Full adder, Computer organization, Memory types, Flip Flops, Counters.											
<b>Module:4</b>	<b>Semiconductor devices:</b>	<b>3 hours</b>									
Conduction in semiconductor materials, principle of operation, V-I characteristics of PN junction diode, Zener diode, BJT, half wave rectifier, full wave rectifier.											
<b>Module:5</b>	<b>Microprocessor &amp; microcontroller:</b>	<b>4 hours</b>									
Overview of ARM architecture, Different modes of ARM processor, various instructions, 8051 Microcontroller architecture, Applications.											
<b>Module:6</b>	<b>Measuring Instruments and Sensors:</b>	<b>5 hours</b>									
<b>Measuring Instruments:</b> Classification of instruments, Working principle of PMMC, MI, Digital & Smart Meters, Ammeter, Voltmeter & wattmeter.											
<b>Sensors:</b> Transducers classification & selections, Resistive, Inductive and capacitive sensors, Optical and Digital sensors											
<b>Module:7</b>	<b>Communication systems</b>	<b>3 hours</b>									
Modulation and Demodulation – Amplitude, frequency, digital modulation, wired and wireless communication – concept and types											
<b>Module:8</b>	<b>Lecture by industry experts.</b>	<b>2 hours</b>									
		<b>Total Lecture hours:</b>									
<b>List of Challenging Experiments (Indicative)</b>											
<b>Software Experiments</b>											
1.	Analysis and verification of circuit using Mesh and Nodal analysis	2 hours									
2.	Verification of network theorems using Maximum power	2 hours									

	transfer	
3.	Analysis of Single AC circuit with R, RL and RC loads	2 hours
4	Design of half adder and full adder	2 hours
5.	Single phase half wave	2 hours
6.	Full wave rectifier	2 hours
7.	Design of controlled switch using BJT	2 hours

#### **Hardware Experiments**

1.	Verification of network theorems using Thevenin's	2 hours
2.	Regulated power supply using Zener diode	2 hours
3.	Design of a lamp dimmer circuit using Darlington pair	2 hours
4	Design and verification of logic circuit by simplifying the Boolean expression	2 hours
5.	Calibration of voltmeter and Ammeter	2 hours
6.	Wiring connection for Fan	2 hours
7.	Staircase wiring layout for multi-storied building	2 hours
8.	Study on Microprocessor kit	2 hours

**Total Laboratory Hours** **30 hours**

<b>MAT1014</b>	<b>Course title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
	<b>Discrete Mathematics and Graph Theory</b>	<b>3</b>	<b>2</b>	<b>0</b>	<b>0</b>	<b>4</b>
<b>Pre-requisite</b>	<b>None</b>				<b>Syllabus Version</b>	
					1.1	

**Course Objectives (CoB): 1,2,3**

- To address the challenge of the relevance of lattice theory, coding theory and algebraic structures to computer science and engineering problems.
- To use number theory, in particular congruence theory to cryptography and computer science problems.
- To understand the concepts of graph theory and related algorithm concepts.

**Expected Course Outcome (CO): 1,2,3,4,5**

At the end of this course, students are expected to

1. form truth tables, proving results by truth tables, finding normal forms,
2. learn proof techniques and concepts of inference theory
3. understand the concepts of groups and application of group codes, use Boolean algebra for minimizing Boolean expressions.
4. learn basic concepts of graph theory, shortest path algorithms, concepts of trees and minimum spanning tree and graph colouring, chromatic number of a graph.
5. Solve Science and Engineering problems using Graph theory.

**Student Learning Outcomes (SLO): 1, 2, 7**

**Module:1 Mathematical Logic and Statement Calculus 6 hours**

Introduction-Statements and Notation-Connectives-Tautologies-Two State Devices and Statement logic -Equivalence - Implications-Normal forms - The Theory of Inference for the Statement Calculus.

**Module:2 Predicate Calculus 4 hours**

The Predicate Calculus - Inference Theory of the Predicate Calculus.

**Module:3 Algebraic Structures 5 hours**

Semigroups and Monoids - Groups – Subgroups – Lagrange's Theorem Homomorphism – Properties-Group Codes.

**Module:4 Lattices 5 hours**

Partially Ordered Relations -Lattices as Posets – Hasse Diagram – Properties of Lattices.

**Module:5 Boolean algebra 5 hours**

Boolean algebra - Boolean Functions-Representation and Minimization of Boolean

Functions –Karnaugh map – McCluskey algorithm.		
<b>Module:6</b>	<b>Fundamentals of Graphs</b>	<b>6 hours</b>
Basic Concepts of Graph Theory – Planar and Complete graph - Matrix representation of Graphs – Graph Isomorphism – Connectivity–Cut sets-Euler and Hamilton Paths–Shortest Path algorithms.		
<b>Module:7</b>	<b>Trees, Fundamental circuits , Cut sets, Graph colouring, covering, Partitioning</b>	<b>12 hours</b>
Trees – properties of trees – distance and centres in tree –Spanning trees – Spanning tree algorithms- Tree traversals- Fundamental circuits and cut-sets. Bipartite graphs - Chromatic number – Chromatic partitioning – Chromatic polynomial - matching – Covering- Four Colour problem.		
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
Industry Expert Lecture

		3	0	0	0	3					
<b>Pre-requisite</b>	<b>MAT1011</b>	<b>Syllabus Version</b>									
		1.0									
<b>Course Objectives :</b>											
[1] Understanding basic concepts of linear algebra to illustrate its power and utility through applications to computer science and Engineering.											
[2] apply the concepts of vector spaces, linear transformations, matrices and inner product spaces in engineering.											
[3] solve problems in cryptography, computer graphics and wavelet transforms											
<b>Course Outcome :</b>											
At the end of this course the students are expected to learn											
[1] The abstract concepts of matrices and system of linear equations using decomposition methods											
[2] The basic notion of vector spaces and subspaces											
[3] Apply the concept of vector spaces using linear transforms which is used in computer graphics and inner product spaces											
[4] Applications in image processing.											
[5] Applications of inner product spaces in cryptography											
<b>Module:1</b>	<b>System of Linear Equations:</b>	<b>6 hours</b>									
Rank of matrix -Gaussian elimination and Gauss Jordan methods - Elementary matrices- permutation matrix - inverse matrices - System of linear equations - LU factorizations.											
<b>Module:2</b>	<b>Vector Spaces</b>	<b>6 hours</b>									
The Euclidean space $R^n$ and vector space- subspace –linear combination-span-linearly dependent-independent- bases - dimensions-finite dimensional vector space.											
<b>Module:3</b>	<b>Subspace Properties:</b>	<b>6 hours</b>									
Row and column spaces -Rank and nullity – Bases for subspace – invertibility- Application in interpolation.											
<b>Module:4</b>	<b>Linear Transformations and applications</b>	<b>7 hours</b>									
Linear transformations – Basic properties-invertible linear transformation - matrices of linear transformations - vector space of linear transformations.											
<b>Module:5</b>	<b>Inner Product Spaces:</b>	<b>6 hours</b>									
Dot products and inner products – the lengths and angles of vectors – matrix representations of inner products- Gram-Schmidt orthogonalisation											
<b>Module:6</b>	<b>Applications of Inner Product Spaces:</b>	<b>6 hours</b>									
QR factorization- Projection - orthogonal projections -Least Square solutions in Computer Codes.											
<b>Module:7</b>	<b>Applications of Linear equations :</b>	<b>6 hours</b>									
An Introduction to coding - Classical Cryptosystems –Plain Text, Cipher Text, Encryption, Decryption .											
<b>Module:8</b>	<b>Contemporary Issues:</b>	<b>2 hours</b>									
Industry Expert Lecture and R & D.											
		<b>Total Lecture hours:</b>	<b>45 hours</b>

<b>Course Objectives:</b>												
<ol style="list-style-type: none"> <li>1. To understand the web architecture and web languages.</li> <li>2. To program for web client and web server objects.</li> <li>3. To understand web development environment and methodology.</li> </ol>												
<b>Course Outcome:</b>												
<ol style="list-style-type: none"> <li>1. At the end of this course students should be able to:</li> <li>2. Differentiate web protocols and web architecture.</li> <li>3. Develop client side web application.</li> <li>4. Implement client side script using JavaScript.</li> <li>5. Develop a sophisticated web application that appropriately employs the MVC architecture</li> <li>6. Demonstrate a client server application using HTTP protocol and access web services for dynamic content using AJAX..</li> <li>7. Exhibit the working of server-side scripts..</li> <li>8. Understand the fundamental working of data using open source databases.</li> </ol>												
<b>Student Learning Outcomes (SLO):</b>		<b>5, 6, 17</b>										
<b>Module1</b>	<b>Web Essentials</b>					<b>3 hours</b>						
Evolution of Web, Internet Overview- Networks - Web Protocols — Web Organization and Addressing - Web Browsers and Web Servers -Security and Vulnerability-Web System Architecture – URL - Domain Name – Client-side and server-side scripting.												
<b>Module2</b>	<b>Web Designing</b>					<b>8 hours</b>						
HTML5 – Form elements, Input types and Media elements, Image map, HTML frames and semantics, HTML events, HTML form validation using pattern attribute, CSS3 - Selectors, Box Model, Backgrounds and Borders, Text Effects, Animations, Multiple Column Layout, User Interface												
<b>Module3</b>	<b>Client-Side Scripting</b>					<b>8 hours</b>						
JavaScript Basics –Arrays- Functions - JavaScript objects – HTML DOM - DOM methods – Events- Regular Expressions – Form Validation-XML, XML DTD, XML Schema, JSON, Jquery												
<b>Module4</b>	<b>Web Applications</b>					<b>6 hours</b>						
Web applications- Web Application Frameworks-MVC framework- Single Page Applications-Responsive Web Design												
<b>Module5</b>	<b>Client/Server Communication</b>					<b>6 hours</b>						
HTTP- Request/Response Model- HTTP Methods- RESTful APIs-AJAX-AJAX with JSON												
<b>Module6</b>	<b>Web Servers</b>					<b>6 hours</b>						
JSP - Node.js-NPM- Call-backs -Events- Express framework-Cookies-Sessions-Scaling												
<b>Module7</b>	<b>Storage</b>					<b>6 hours</b>						
JDBC - MongoDB-Manipulating and Accessing MongoDB Documents from Node

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
<b>List of Experiments :</b>		
1.	Create a user registration webpage using HTML Form elements (Input types) for a hackathon event registration. The webpage must contain the following input types to get the details of the students  Input Types:- Textfields, Textarea, checkbox, radio button, submit button, reset button, drop down box, images (if required).  Apply styles, Formatting tags of HTML for good design.  Use HTML 5 new input types to display additional contents	2 hours
2	CSS – internal, external and inline  a. Apply CSS to a shopping site having two branches with different localized content, the website being hosted on a local web server. Add an unordered list and an image to your web page, Create a html file that contains a heading and a couple of paragraphs, modify a button with which it is possible to change the text that is shown on the screen, add buttons to enlarge or shrink featured images, Modify the CSS style definition so that the initial width of a rectangle border is 6 pixels, Improve the Guess-A-Word game, Object Oriented Programming with JavaScript, Add CSS definitions so that <td> elements that represent days of the previous month will have a different color, improve webpage so that you draw a brick-wall behind the picture shown, draw_on_canvas () function	3 hours
3.	Design the following using JavaScript and DOM  a) Given an array of words, write a javascript code to count the number of vowels and number of consonants in each word. Use Regular Expressions.  b) Include Image Slide Show Digital clock, Survey Poll to make your webpage  i) Dynamic.  Develop a web application to implement online quiz system. The application includes only client side script	2 hours
4.	Create a popup Login form using jQuery which appears at the center of screen on loading the page after a specified time interval. Include Captcha text in the login page.	2 hours
5.	a) Validate the Event Registration Form given below using Jquery for the following conditions.  All fields are mandatory Zip code should be exactly five digits Email validation  b) Create a JSON file for a list of cities. Provide autocomplete option for city field using the JSON file as source.	4 hours

	 <h2 style="text-align: center;">Event Registration Form</h2> <p>First Name <input type="text"/></p> <p>Last Name <input type="text"/></p> <p>Mailing Address <input type="text"/></p> <p>City <input type="text"/></p> <p>State <input type="button" value="▼"/></p> <p>Zip Code <input type="text"/></p> <hr/> <p>Are you speaking at the conference <input type="checkbox"/> Yes <input type="checkbox"/> No</p> <p>Conference Pass <input type="radio"/> 1-day Pass  <input type="radio"/> 2-day Pass  <input type="radio"/> 3-day Pass  <input type="radio"/> 4-day Pass</p> <hr/> <p>Meal Preference <input type="button" value="▼"/></p> <p style="text-align: center;"><input type="button" value="Submit"/></p>	
6.	<p>Using Angular JS, add names that are entered in textbox to the list and clear the textbox once the name is added to list.</p> <ul style="list-style-type: none"> <li>• Meenal</li> <li>• Palak</li> <li>• Andrea</li> <li>• Parul</li> </ul> <p><input type="text" value="Parul"/> <input type="button" value="add"/> <input type="text"/> <input type="button" value="add"/></p>	4 hours
7.	<p>Design a shopping cart application using AngularJS. Your shopping webpage should have the provisions for selecting the list of items from different category, Once the items are selected on clicking the submit button the items in the cart with its price should be displayed. Sample design is given below.</p>	3 hours

	<p>Image      Product Description      Quantity      Price      Total</p> <p>Box of 12 Rose Petal Blueberry Cupcakes Product Code: T1G12145</p> <p>Box of 6 Cookie Monster Raspberry Cupcakes Product Code: CHRM1599</p> <p>2    \$12.99    \$25.98</p> <p>1    \$12.99    \$12.99</p> <p><b>Total \$38.97</b></p> <p><a href="#">Back to Shop</a>    <a href="#">Continue to Checkout</a></p>	
8.	<p>Create a MongoDB collection of “books” with the following details: <b>Title, ISBN(unique id), Authors, Publication ,Year of Publication and Price.</b></p> <p>Write commands for the following:</p> <ul style="list-style-type: none"> <li>a) Insert a new document with multiple authors.</li> <li>b) Update a document with change in price</li> <li>c) Remove documents with year of publication lesser than 1990.</li> </ul>	3 hours
9.	<p>A MongoDB collection of words has the document structure as:</p> <pre>{   word:&lt;word&gt;,   first:&lt;first_letter&gt;,   last:&lt;last_letter&gt;,   size: &lt;character_count&gt; }</pre> <p>Perform the following operations on those documents using Nodejs.</p> <p>Find the set of words which starts with letters ‘a’, ‘b’ or ‘c’.</p> <p>Find the set of words which exactly has 12 letters.</p> <p>Count the number of words that starts and ends with a vowel.</p> <p>Find the first ten words that end with the letter ‘e’ and display it in descending order.</p>	2 hours
10.	<p>Write a NodeJs program to perform debit operation for a bank account. The HTML form should get input for the account no and the amount to be debited. The entered amount has to be reduced from their balance. In the database maintain account number and balance</p>	2 hours
11.	<ul style="list-style-type: none"> <li>a. Develop a thesaurus tool by creating a schema for thesaurus. When a word is entered the synonyms or antonyms must be displayed based on the user request.</li> <li>b. XSL – Create an employee information system using XML and display the employee number and name of employees with salary greater than Rs. 100000 p/m. with XSL.</li> <li>c. Develop a thesaurus tool by creating a schema for thesaurus. When a word is entered the synonyms or antonyms must be displayed based on the user request.</li> </ul>	3 hours
<b>Total Laboratory Hours</b>		<b>30 hours</b>
Mode of evaluation: Project/Activity		
Recommended by Board of Studies	11-02-2021	
Approved by Academic Council	No. 61	Date 18-02-2021

<b>MDI3002</b>	<b>Foundations of Data Science</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
		1.0				

**Course Objectives:**

1. To provide fundamental knowledge on data science and to understand the role of statistics and optimization to perform mathematical operation in the field of data science.
2. To understand the process of handling heterogeneous data and visualize them for better understanding.
3. To gain the fundamental knowledge on various open source data science tools and understand their process of applications to solve various industrial problems.

**Course Outcome:**

1. Ability to obtain fundamental knowledge on data science.
2. Demonstrate proficiency in statistical analysis of data.
3. Develop mathematical knowledge and study various optimization techniques to perform data science operations.
4. Handle various types of data and visualize them using through programming for knowledge representation.
5. Demonstrate numerous open source data science tools to solve real-world problems through industrial case studies.

**Student Learning Outcomes (SLO):** **1,5,14**

<b>Module:1</b>	<b>Basics of Data Science</b>	<b>5 hours</b>
Introduction; Typology of problems; Importance of linear algebra, statistics and optimization from a data science perspective; Structured thinking for solving data science problems, Structured and unstructured data		
<b>Module:2</b>	<b>Statistical Foundations</b>	<b>7 hours</b>
Descriptive statistics, Statistical Features, summarizing the data, outlier analysis, Understanding distributions and plots, Univariate statistical plots and usage, Bivariate and multivariate statistics, Dimensionality Reduction, Over and Under Sampling, Bayesian Statistics, Statistical Modeling for data analysis		
<b>Module:3</b>	<b>Algorithmic Foundations</b>	<b>8 hours</b>
Linear algebra Matrices and their properties (determinants, traces, rank, nullity, etc.); Eigenvalues and eigenvectors; Matrix factorizations; Inner products; Distance measures; Projections; Notion of hyperplanes; half-planes, elementary spectral graph theory. Sampling and VC-dimension - Random walks and graph sampling, MCMC algorithms, learning, linear and non-linear separators, PAC learning		
<b>Module:4</b>	<b>Optimization</b>	<b>7 hours</b>
Unconstrained optimization; Necessary and sufficiency conditions for optima; Gradient descent methods; Constrained optimization, KKT conditions; Introduction to non-gradient techniques; Introduction to least squares optimization		
<b>Module:5</b>	<b>Programming Foundation and Exploratory Data Analysis</b>	<b>6 hours</b>
Introduction to Python Programming, Types, Expressions and Variables, String Operations, selection, iteration, Data Structures- Strings, Regular Expression, List and Tuples, Dictionaries, Sets; Exploratory Data Analysis (EDA) - Definition, Motivation, Steps in data exploration, The basic datatypes, Data type Portability, Basic Tools of EDA, Data Analytics Life cycle, Discovery		
<b>Module:6</b>	<b>Data Handling and Visualization</b>	<b>6 hours</b>
Data Acquisition, Data Pre-processing and Preparation, Data Quality and Transformation,		

Handling Text Data; Introduction to data visualization, Visualization workflow: describing data visualization workflow, Visualization Periodic Table; Data Abstraction -Analysis: Four Levels for Validation- Task Abstraction - Analysis: Four Levels for Validation Data Representation: chart types: categorical, hierarchical, relational, temporal & spatial			
<b>Module:7</b>	<b>Data Science Tools and Techniques</b>		
Overview and Demonstration of Open source tools such as R, Octave, Scilab. Python libraries: SciPy and sci-kitLearn, PyBrain, Pylearn2; Weka.			
<b>Module:8</b>	<b>Recent Trends</b>		
<b>Total Lecture hours</b>	<b>45 hours</b>		
<b>Text Books</b>			
1.	R. V. Hogg, J. W. McKean and A. Craig, Introduction to Mathematical Statistics, 8th Ed., Pearson Education India, 2019.		
2.	Avrim Blum, John Hopcroft, Ravindran Kannan, "Foundations of Data Science", Cambridge University Press, 2020.		
<b>Reference Books</b>

<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To instill the basics of Machine Learning Concepts</li> <li>2. To be able to apply ML concepts in computing by making a choice of the suitable ML technique</li> <li>3. To practice tuning ML Models and address data inadequacies</li> <li>4. To be able to understand and enhance various classification models</li> <li>5. To be able to apply simple techniques like regression for powerful applications</li> <li>6. To gain an insight into parameters of supervised learning models like Clustering</li> <li>7. To understand the working of Neural Networks and the components involved</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. Understanding the nuances of an ML sequence</li> <li>2. Derive an understanding of a Model's deficiency</li> <li>3. Gaining knowledge of mathematical concepts involved in Gradient Descent</li> <li>4. Appreciate the difference between Supervised and Unsupervised learning models</li> <li>5. Learn to apply accuracy metrics for various models</li> <li>6. Get an insight into Reinforced Learning approaches for Problem Solving</li> <li>7. Being able to understand Deep Networks and their potential in different fields</li> </ol>											
<b>Student Learning Outcomes (SLO):</b>	<b>1, 5, 14</b>										
<b>Module:1</b>	<b>Introduction to Machine Learning</b>	<b>6 hours</b>									
Machine Learning – Types; Data – Getting the data, visualizing the data, preparing the data; Selecting and Training a Model – Fine tuning a Model: Grid Search – Randomized Search - Main Challenges: Data Inadequacy – Non-representativeness – Irrelevant features – Overfitting the Model – Underfitting the Model;											
<b>Module:2</b>	<b>Supervised Learning Techniques</b>	<b>8 hours</b>									
Binary Classifier – Performance Measures : Cross –Validation – Confusion Matrix –Precision and Recall – Multiclass classification – Multi-label classification; Linear Regression – Gradient Descent: Batch Gradient – Stochastic Gradient Descent – Mini-batch Gradient Descent; Polynomial Regression –Logistic Regression –Estimating Probabilities, Decision Boundaries, Softmax Regression											
<b>Module:3</b>	<b>Support Vector Machines</b>	<b>7 hours</b>									
Linear SVM with Soft Margin Classification – Non-linear SVM Classification: Polynomial features –Similarity features –Gaussian Kernel; SVM Regression											
<b>Module:4</b>	<b>Neural Networks</b>	<b>6 hours</b>									
Introduction to a Simple Neural Network – Computations – Output Layer of a Binary and a Multiclass problem, Choosing the right configuration, Loss Functions, Back Propagation											
<b>Module:5</b>	<b>Decision Trees and Random Forests</b>	<b>7 hours</b>									
Training and Visualizing a Decision Tree –CART Algorithm – Gini Impurity; Bagging – Pasting – Random Forests – Boosting: Adaboost and Gradient Boosting –Stacking											
<b>Module:6</b>	<b>Dimensionality Reduction</b>	<b>4 hours</b>									
Main approaches – Projection and Manifold Learning – PCA (Principal Component Analysis): Preserving the Variance – Principal Components – Projecting down to d Dimensions – Randomized PCA – Kernel PCA											
<b>Module:7</b>	<b>Unsupervised Learning Techniques</b>	<b>5 hours</b>									
Clustering –Kmeans – Limitations –Clustering for Image Segmentation, Preprocessing , Semi-supervised learning – DBSCAN – Hierarchical – Partitional - Gaussian Mixtures											

<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
		<b>Total Lecture hours:</b> <b>45 hours</b>
<b>Text Book(s)</b>

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
<b>List of Experiments</b>		
1.	Simple Python Primer	3 hours
2.	Predicting real estate prices/loan processing data using simple Neurons	3 hours
3.	Classification of tabular data	2 hours
4.	Analysis of Decision Trees	3 hours
5.	Determining future EMI defaulters using Prediction Technique	3 hours
6.	Classification of images using Neural Networks	3 hours
7.	SVM based data analysis	2 hours
8.	Clustering UCI data for accuracy and outlier analysis	4 hours
9.	Ensemble methods practice	3 hours
10	Finance data analysis using Regression Techniques	4 hours

<b>CSI1005</b>	<b>User Interface Design</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		2	0	2	0	3
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
		1.1				

**Course Objectives:**

1. To understand the basics of User Interface Design.
2. To design the user interface, menu creation and windows creation
3. To understand the concept of menus, windows, interfaces, business functions, various problems in windows design with colour, text, Non-anthropomorphic Design.
4. To study the design process and evaluations

**Course Outcome:**

1. Knowledge on development methodologies, evaluation techniques and user interface building tools
2. Explore a representative range of design guidelines and gain experience in applying design guidelines to user interface design tasks.
3. Ability to design their own Human Computer
4. be able to perform task analysis for user interface design and usability analysis including heuristic analysis
5. understand the innovative features of interactive system and be able to improve existing interfaces by considering these features

**Student Learning Outcomes (SLO):** **6, 8, 17**

<b>Module:1</b>	<b>Interactive Software and Interaction Device</b>	<b>4 hours</b>
-----------------	--	----------------

Human – Computer Interface – Characteristics Of Graphics Interface – Direct Manipulation Graphical System – Web User Interface – Popularity – Characteristic & Principles.

<b>Module:2</b>	<b>Human Computer Interaction</b>	<b>4 hours</b>
-----------------	-----------------------------------	----------------

User Interface Design Process – Obstacles – Usability – Human Characteristics In Design – Human Interaction Speed – Business Functions – Requirement Analysis – Direct – Indirect Methods — Conceptual Model Design.

<b>Module:3</b>	<b>User Interface Design Principles and Models</b>	<b>4 hours</b>
-----------------	--	----------------

Shneiderman's eight golden rules, Norman's Seven principles, Norman's model of interaction, Nielsen's ten heuristics, Heuristic evaluation, contextual evaluation, Cognitive walk-through Keyboard Level Model- Application of the Keyboard Level Model, GOMS.

<b>Module:4</b>	<b>Human Factors in UI Design</b>	<b>4 hours</b>
-----------------	-----------------------------------	----------------

Characteristics – Components – Presentation Styles – Types – Managements – Organizations – Operations – Web Systems – System Timings – Device – Based Controls Characteristics – Screen – Based Controls — Human Consideration In Screen Design – Structures Of Menus Operate Control – Text Boxes – Selection Control – Combination Control – Custom Control – Presentation Control.

<b>Module:5</b>	<b>UI Design Process and Evaluation</b>	<b>4 hours</b>
-----------------	---	----------------

User Interface Design Process - Usability Testing - Usability Requirements and Specification procedures and techniques - User Interface Design Evaluation.

<b>Module:6</b>	<b>Multimedia &amp; Mobile User Experience Design</b>	<b>4 hours</b>
-----------------	---	----------------

Text For Web Pages – Effective Feedback – Guidance & Assistance – Internationalization – Accessibility – Icons – Image – Multimedia – Coloring.

Mobile Ecosystem: Platforms, Application frameworks- User Experience Design for Mobile – Elements of Mobile User Interface and Experience – UI Style guidelines for Mobile – UI Mobile Components and Patterns

<b>Module:7</b>	<b>User and Task Models</b>	<b>4 hours</b>
-----------------	-----------------------------	----------------

Cognitive Models - Groupware - Ubiquitous Computing - Virtual and Augmented Reality –

Multi-model Interface Characteristics — Multi-model interface Types (Voice & Gesture Recognition) — Communication and Collaboration models

<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To introduce soft computing concepts and techniques and foster their abilities in designing appropriate technique for real-world problems.</li> <li>2. To provide adequate knowledge of non-traditional technologies and fundamentals of artificial neural networks, backpropagation networks, fuzzy sets, fuzzy logic, genetic algorithms in solving social and engineering problems.</li> <li>3. To provide comprehensive knowledge of swarm intelligence and rough set concepts</li> </ol>											
<b>Course Outcome:</b>											
The student will be able											
<ol style="list-style-type: none"> <li>1. Apply neural networks, advanced AI techniques of swarm intelligence and rough set concepts for solving different engineering problems</li> <li>2. Identify and describe soft computing techniques and build supervised learning and unsupervised learning networks.</li> <li>3. Apply fuzzy logic and reasoning to handle uncertainty and solve various engineering problems.</li> <li>4. Apply genetic algorithms to combinatorial optimization problems.</li> <li>5. Evaluate and compare solutions by various soft computing approaches for a given problem.</li> <li>6. Use existing software tools to solve real problems using a soft computing approach</li> </ol>											
<b>Student Learning Outcomes (SLO):</b> <b>1, 7, 14</b>											
<b>Module:1</b>	<b>Introduction to Soft Computing</b>	<b>3 hours</b>									
Overview of Soft Computing, Soft Vs Hard computing, Components of soft computing, Introduction to neural networks, Fuzzy logic, Genetic algorithms. Artificial neural networks Vs Biological neural networks, Neural network architectures, Characteristics of neural network, Early neural network architectures (MADALINE network), and Application domains.											
<b>Module:2</b>	<b>Back Propagation networks</b>	<b>8 hours</b>									
Architecture of a back propagation network, Backprogragation learning, Effect of tuning parameters, Selection of parameters in back propagation network, Application domains.											
<b>Module:3</b>	<b>Associative Memory Networks</b>	<b>7 hours</b>									
Autocorrelators, heterocorrelators: Kosko's discrete Bi-direction Associative Memory (BAM), Exponential BAM, Associative memory for real-coded pattern pairs, Application - Character Recognition.											
<b>Module:4</b>	<b>Unsupervised learning networks</b>	<b>7 hours</b>									
Neural Nets based on competition, Max net, Mexican Hat, Hamming net, Kohonen Self organizing Feature Map, Counter propagation, Learning Vector Quantization , Adaptive Resonance Theory											
<b>Module:5</b>	<b>Advanced AI Techniques and Rough set concepts</b>	<b>6 hours</b>									
Swarm Intelligence (SI), Particle swarm optimization (PSO), Ant Colony Optimization, Petrinets, Coloured Petrinets, Entropy, Rough sets, Rough set theory, Set approximation, Rough membership, Attributes, Dependency of attributes, Rough equivalence, Reducts, Rough Reducts based on SVM											
<b>Module:6</b>	<b>Fuzzy Logic and Inference</b>	<b>6 hours</b>									
Fuzzy Logic, Predicate Logic, Fuzzy Quantifiers, Fuzzy Inference , Fuzzy knowledge and rule based system, Fuzzy decision making, Defuzzification, Applications of fuzzy logic, Neuro Fuzzy modelling											
<b>Module:7</b>	<b>Genetic Algorithms</b>	<b>6 hours</b>									

Basic concepts, encoding, fitness function, reproduction, Genetic modeling; Inheritance operator, cross over, inversion & deletion, mutation operator, Bitwise operator, Generational Cycle, Convergence of GA, Applications & advances in GA, Differences & similarities between GA & other traditional method		
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>

<b>Student Learning Outcomes (SLO):</b> <b>1, 5, 14</b>		
<b>Module:1</b>	<b>Data Structures</b>	<b>4 Hours</b>
Problem solving using Python Data Structures : LIST, DICT, TUPLES and SET- Functions and Exceptions – Lamda Functions and Parallel processing – MAPS – Filtering - Itertools – Generators		
<b>Module:2</b>	<b>Classes and Objects</b>	<b>4 Hours</b>
Classes as User Defined Data Type ,Objects as Instances of Classes, Creating Class and Objects, Creating Objects By Passing Values, Variables & Methods in a Class Data Abstraction, Data Hiding, Encapsulation, Modularity, Inheritance, Polymorphism		
<b>Module:3</b>	<b>Multithreading in Python</b>	<b>4 Hours</b>
Python Multithreading and Multiprocessing Multithreading and multiprocessing Basics – Threading module and example – Python multithreading - Multithreaded Priority Queue		
<b>Module:4</b>	<b>Data Processing</b>	<b>5 Hours</b>
Handling CSV, Excel and JSON data - Creating NumPy arrays, Indexing and slicing in NumPy, Downloading and parsing data, Creating multidimensional arrays, NumPy Data types, Array Attribute, Indexing and Slicing, Creating array views copies, Manipulating array shapes I/O – MATPLOT LIB		
<b>Module:5</b>	<b>Data Science Perspectives</b>	<b>4 Hours</b>
Using multilevel series, Series and Data Frames, Grouping, aggregating, Merge DataFrames, Generate summary tables, Group data into logical pieces, Manipulate dates, Creating metrics for analysis		
<b>Module:6</b>	<b>Data Handling Techniques</b>	<b>3 Hours</b>
Data wrangling ,Merging and joining,- Loan Prediction Problem, Data Mugging using Pandas		
<b>Module:7</b>	<b>Web Applications</b>	<b>4 Hours</b>
Web Applications With Python – Django / Flask / Web2Py – Database Programming – NoSQL databases - Embedded Application using IOT Devices - Building a Predictive Model for IOT and Web programming		
<b>Module: 8</b>	<b>Recent Trends</b>	<b>2 Hours</b>
<b>Total Hours</b>		<b>30 Hours</b>

<ol style="list-style-type: none"> <li>Identify the IoT networking components with respect to OSI layer.</li> <li>Design and develop IoT based applications.</li> <li>Select the suitable communication protocol and software for the application.</li> <li>Develop an application using microcontroller IDE with Wi-Fi module in order to communicate with various cloud services.</li> <li>Analyze the data collected from sensors using machine learning approaches with the support of python programming.</li> </ol>											
<b>Student Learning Outcomes (SLO):</b>		2,5,6									
<b>Module:1</b>	<b>Introduction to Internet of Things</b>	<b>5 Hours</b>									
Introduction to IoT - Sensing, Actuation, Networking basics, Communication protocols, Sensor networks, M2M Communications, IoT characteristics. IoT Architecture - IoT functional blocks, Physical design of IoT, Logical design of IoT and Communication models.											
<b>Module:2</b>	<b>An IoT Architectural Overview</b>	<b>6 Hours</b>									
An Architectural Overview - An IoT architecture outline, Main design principles and needed capabilities, standards considerations. IoT Reference Architecture- Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views.											
M2M and IoT technology fundamentals - Devices and gateways, Local and wide area networking, Data management, Business process in IoT, Everything as a service (XaaS), M2M and IoT analytics, knowledge management.											
<b>Module:3</b>	<b>IoT Protocols and Point-to-Point Communication</b>	<b>7 hours</b>									
IoT protocols and softwares - MQTT, UDP, MQTT brokers, Publish-subscribe modes, HTTP, CoAP, XMPP, and Gateway protocols. IoT point-to-point communication technologies - Communication pattern, and IoT protocol architecture. Selection of wireless technologies - LoWPAN, Zigbee, WiFi, BLE, SIG, NFC, LoRa, LiFi, and WiDi.											
<b>Module:4</b>	<b>Programming with Microcontrollers</b>	<b>6 hours</b>									
Architecture of Microcontroller IDE, Setup the Microcontroller IDE, Developing a Microcontroller program, libraries, Basics of embedded C programming for Microcontroller, Interfacing with sensors & actuators - LED, push button, ultrasonic, and buzzer, Arduino interfacing with LCD, Working with digital and analog sensors - Temperature, Gas, Humidity, Motion, and Light sensors.											
<b>Module:5</b>	<b>Advanced Programming with Microcontrollers</b>	<b>7 hours</b>									
Microcontroller interfacing with Relay Switch and Servo Motor, Basic networking with ESP8266 WiFi module, Microcontroller interfacing with Wi-Fi module, TinkerCAD simulation, Thing speak cloud synchronization with Wi-Fi module, Posting data to ThinkSpeak cloud, Receiving data from Thing speak, Various other cloud services available in the market.											
<b>Module:6</b>	<b>Developing IoT Solutions</b>	<b>8 hours</b>									
Comparison of various RPi Models, Understand SoC architecture, Raspberry Pi Pin description, Raspberry Pi on-board components, RPi operating system and Linux commands, First boot											

and basic configuration, Introduction to python - keywords, operators, data structures, flow control, and python libraries, Sensor interfacing - Temperature and humidity sensor (DHT11), and Ultrasonic sensor.

<b>Module:7</b>	<b>Case Studies</b>	<b>4 hours</b>
Smart city, Smart health monitoring system, Smart irrigation system for farmers, Smart security for home, and Smart electrical appliances at Home.		
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
	<b>Total hours:</b>	<b>45 hours</b>

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar

<b>List of Experiments</b>		
1.	The process of setting up a platform for Microcontroller programming.	3 hours
2.	Write a program in to display binary pattern on three LEDs	2 hours
3.	Design an experiment to identify the room temperature and humidity and turn on/off the LED based on the threshold considered.	2 hours
4.	Write a program to interface with Bluetooth sensor that switches ON/OFF the LED based on the input 0/1.	3 hours
5.	Write a program to interface with temperature and humidity sensors and store the information in Thingspeak cloud.	3 hours
6.	Write a program to rotate the servo motor in clockwise or anti-clockwise direction based on the value received from Thinkspk cloud. If input is 0, then clockwise. Else, anti-clockwise.	3 hours
7.	Write a program to display the level of garbage bin in the smartphone, and Thingspeak based on the information received from the bin using an ultrasonic sensor.	3 hours
8.	Write a program to collect the temperature or humidity information.	2 hours
9.	Write a program to turn on/off the LED based on the pushbutton input.	2 hours
10.	Write a program to collect the information from temperature sensor and send it to MQTT broker.	3 hours
11.	Implement a Theft detection application.	4 hours
Total Laboratory Hours		<b>30 hours</b>

Mode of evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar

<b>CSI3009</b>	<b>Advanced Wireless Networks</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>						
		3	0	2	0	4						
<b>Pre-requisite</b>	<b>Syllabus version</b>											
	1.0											
<b>Course Objectives:</b>												
<ol style="list-style-type: none"> <li>1. To study about advanced wireless network, LTE, 4G and Evolutions from LTE to LTEA.</li> <li>2. To study about wireless IP architecture, Packet Data Protocol and LTE network architecture.</li> <li>3. To study about wireless protocols, Mobility Management and Wireless Security.</li> </ol>												
<b>Course Outcome:</b>												
<ol style="list-style-type: none"> <li>1. Learn the latest 4G networks and LTE</li> <li>2. Understand about the wireless standards and design.</li> <li>3. Understand about the wireless network architecture and its concepts.</li> <li>4. Learn wireless Technologies and protocols</li> <li>5. Understand about the mobility management and cellular network.</li> <li>6. Learn the security concepts of wireless networks and also the recent trends.</li> </ol>												
<b>Student Learning Outcomes (SLO):</b>	<b>2, 5 6</b>											
<b>Module:1</b>	<b>Introduction</b>	<b>7 hours</b>										
Introduction to 1G/2G/3G/4G Terminology. Evolution of Public Mobile Services -Motivation for IP Based Wireless Networks -Requirements and Targets for Long Term Evolution (LTE) - Technologies for LTE- 4G Advanced Features and Roadmap Evolutions from LTE to LTEA												
<b>Module:2</b>	<b>Standards and Design</b>	<b>5 hours</b>										
Wireless systems and standards. Wireless LANs: Wireless LAN technology. Wireless standard (IEEE 802.11 etc.) and Other IEEE 802.11 Standards												
<b>Module:3</b>	<b>Wireless Architectures</b>	<b>7 hours</b>										
3GPP Packet Data Networks - Network Architecture - Packet Data Protocol (PDP) Context - Configuring PDP Addresses on Mobile Stations - Accessing IP Networks through PS Domain – LTE network Architecture - Roaming Architecture- Protocol Architecture												
<b>Module:4</b>	<b>Wireless technologies</b>	<b>7 hours</b>										
Cellular wireless networks and systems principles. Antennas and radio propagation. Signal encoding and modulation techniques., advanced modulation and coding, medium access techniques, cognitive radio and dynamic spectrum access networks, Static and dynamic channel allocation techniques												
<b>Module:5</b>	<b>Wireless Protocols</b>	<b>6 hours</b>										
MAC Protocols, The Mediation Device Protocol, Contention based protocols - PAMAS, Schedule based protocols – LEACH, IEEE 802.15.4 MAC protocol, Challenges and Issues in Transport layer protocol. Routing protocols- data centric routing protocols, hierarchical routing protocols, location based routing, energy efficient routing.												
<b>Module:6</b>	<b>Mobility Management</b>	<b>5 hours</b>										
Cellular Networks-Cellular Systems with Prioritized Handoff-Cell Residing Time Distribution Mobility Prediction in Pico- and Micro-Cellular Networks												
<b>Module:7</b>	<b>Wireless Network Security</b>	<b>6 hours</b>										
Network Security Requirements, Issues and Challenges in Security Provisioning, Network Security Attacks, Layer wise attacks in wireless networks, possible solutions for jamming, tampering, black hole attack, flooding attack. Key Distribution and Management, Secure Routing												
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>										
	<b>Total Lecture hours:</b>	<b>45 hours</b>

<b>Course Objectives:</b>										
<ol style="list-style-type: none"> <li>1. To understand the fundamental concepts of graphics and multimedia.</li> <li>2. To acquire and implement the learning relate to 2D and 3D concepts in graphics programming.</li> <li>3. To comprehend the elementary 3D modeling and rendering techniques.</li> <li>4. To analyze the fundamentals of multimedia towards its representations, perceptions, communication and applications.</li> </ol>										
<b>Course Outcome:</b>										
<ol style="list-style-type: none"> <li>1. Interpret the basic components of the graphics system and the color models.</li> <li>2. Design and demonstrate the basic graphical output primitives.</li> <li>3. Perform two and three dimensional transformations and viewing</li> <li>4. Describe and apply methods to model and render 3D objects.</li> <li>5. Identify and describe the function of the general skill sets in the multimedia systems..</li> <li>6. Expand the knowledge about the multimedia and its communication standards.</li> </ol>										
<b>Student Learning Outcomes (SLO):</b>	<b>2,9,11</b>									
<b>Module:1</b>	<b>Graphical Concepts and Display Systems</b>	<b>6 hours</b>								
Graphics Systems: Video Display Devices – Types – Raster-Scan Systems and Random-Scan Systems – Input Devices – Hard-Copy Devices – Graphics Software; color models.										
<b>Module:2</b>	<b>Output Primitives</b>	<b>6 hours</b>								
Output Primitives: Points and lines – Line Drawing Algorithm: DDA and Bresenham's Algorithm – Midpoint Circle Generating Algorithm – Line Attributes – Color and Grayscale Levels.										
<b>Module:3</b>	<b>2-D Geometrical Transformations and Viewing</b>	<b>7 hours</b>								
Basic Transformations – Matrix Representations and Homogeneous Coordinates – Composite Transformations; Viewing: pipeline – Window-to- Viewport Coordinate Transformation; Clipping: point, line and polygon clipping algorithms										
<b>Module:4</b>	<b>3-D Geometrical Transformations and Viewing</b>	<b>6 hours</b>								
Three dimensional concepts; 3-D transformations: Basic, Other and Composite Transformations; Viewing: Parallel and Perspective Projections										
<b>Module:5</b>	<b>Modeling and Rendering Techniques</b>	<b>6 hours</b>								
Visible surface determination - Z-Buffer method, Scan line method, Depth sorting Method, raytracing, Shading Model - Gouraud and Phong Shading.										
<b>Module:6</b>	<b>Multimedia System Design</b>	<b>6 hours</b>								
Multimedia basics – Components of Multimedia – Multimedia applications – Multimedia Authoring – Hypermedia.										
<b>Module:7</b>	<b>Multimedia and Communication Standards</b>	<b>6 hours</b>								
Digitization of Sound – Quantization of Audio – Transmission of Audio – Multimedia communication standards – JPEG, MPEG.										
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>								
		<b>Total Lecture hours:</b>

<b>CSI3012</b>	<b>Distributed Systems</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>					
		3	0	2	0	4					
<b>Pre-requisite</b>	Nil	<b>Syllabus version</b>									
		1.0									
<b>Course Objectives:</b>											
1. To provide students with contemporary knowledge in distributed systems 2. To equip students with skills to analyze and design distributed applications. 3. To provide master skills to measure the performance of distributed synchronization algorithms											
<b>Course Outcome:</b>											
1. Elucidate the foundations and issues of distributed systems 2. Understand the various synchronization issues and global state for distributed systems. 3. Implement the Mutual Exclusion and Deadlock detection algorithms in distributed systems 4. Explore the agreement protocols and fault tolerance mechanisms in distributed systems. 5. Describe the features of peer-to-peer and distributed shared memory systems 6. Demonstrate the concepts of Resource and Process management and synchronization algorithm											
<b>Student Learning Outcomes (SLO):</b>	2,5										
<b>Module:1</b>	<b>Introduction</b>	<b>6 hours</b>									
Introduction to Distributed Systems - Examples – Trends in Distributed Systems – Focus on resource sharing – System Models – Networking and Internetworking – Inter process Communications.											
<b>Module:2</b>	<b>Distributed objects and Remote invocation</b>	<b>6 hours</b>									
Publish-subscribe system – message queues – shared memory approach. Remote procedure call – distributed objects-communication between distributed objects – RMI – JSON-RMI											
<b>Module:3</b>	<b>Message Ordering and Snapshots</b>	<b>7 hours</b>									
Message ordering and group communication: Message ordering paradigms -Asynchronous execution with synchronous communication -Synchronous program order on an asynchronous system -Group communication – Causal order (CO) – Total order. Global state and snapshot recording algorithms: Introduction -System model and definitions -Snapshot algorithms for FIFO channels											
<b>Module:4</b>	<b>Distributed Mutex and Deadlock</b>	<b>6 hours</b>									
Distributed mutual exclusion algorithms: Introduction – Preliminaries – Lamports algorithm - Ricart-Agrawala algorithm Deadlock detection in distributed systems: Introduction – System model – Preliminaries -Models of deadlocks – Knapps classification – Algorithms for the single resource model											
<b>Module:5</b>	<b>Concurrency control</b>	<b>6 hours</b>									
Distributed deadlock – Resource allocation model - requirements and performance metrics - classification of distributed deadlock detection algorithm											
<b>Module:6</b>	<b>Peer To Peer and Distributed Shared Memory</b>	<b>6 hours</b>									
Peer-to-peer computing and overlay graphs: Introduction – Data indexing and overlays – Chord – Content addressable networks – Tapestry. Distributed shared memory: Abstraction and advantages – Memory consistency models -Shared memory Mutual Exclusion.											
<b>Module:7</b>	<b>Process and Resource Management</b>	<b>6 hours</b>									
Process Management: Process Migration: Features, Mechanism – Threads: Models, Issues, Implementation. Resource Management: Introduction- Features of Scheduling Algorithms –Task Assignment Approach – Load Balancing Approach – Load Sharing Approach.											
<b>Module:8</b>	<b>Contemporary issues:</b>	<b>2 hours</b>									
		<b>Total Lecture hours:</b>	<b>45 hours</b>

		1.0									
<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To provide a conceptual understanding on the function of Blockchain.</li> <li>2. To discuss the functional elements of the bitcoin and its mining process.</li> <li>3. To introduce the Ethereum and solidity platform</li> <li>4. To understand how blockchain is applied to different aspects of the business.</li> <li>5. To describe current Hyperledger projects and cross-industry use cases</li> </ol>											
<b>Course Outcome:</b>											
At the end of this course, students will be able to:											
<ol style="list-style-type: none"> <li>1. Understand the basics of cryptographic hash functions and blockchain</li> <li>2. Demonstrate the functional blocks of the bitcoin and cryptocurrencies</li> <li>3. Describe the consensus algorithms and its challenges</li> <li>4. Design the distributed application using Ethereum platform</li> <li>5. Construct the solution by design and development of the smart contract using solidity</li> <li>6. Identify and select suitable blockchain based applications</li> <li>7. Analyze the challenges and issues in blockchain applications</li> </ol>											
<b>Student Learning Outcomes (SLO):</b>	<b>1, 6, 7</b>										
<b>Module:1</b>	<b>Blockchain Foundations</b>	<b>7 hours</b>									
Blockchain & Distributed Ledger Technology (DLT) - Elements of Distributed Computing: Distributed Database, Two General Problem, Byzantine General problem and Fault Tolerance, Hadoop Distributed File System, Distributed Hash Table - Elements of Cryptography: Hash function, Properties of a hash function, Puzzle friendly Hash, Collison resistant hash, digital signatures, public key crypto, verifiable random functions - ECDSA, Memory Hard Algorithm, Zero Knowledge Proof, Hash pointer and Merkle tree.											
<b>Module:2</b>	<b>Bitcoin and Cryptocurrency</b>	<b>7 hours</b>									
A basic crypto currency, Creation of coins, Payments and double spending, FORTH – the precursor for Bitcoin scripting, Bitcoin - Wallet - Blocks - Bitcoin Scripts, Bitcoin P2P Network, Transaction in Bitcoin Network, Block Mining, Block propagation and block relay											
<b>Module:3</b>	<b>Distributed Consensus</b>	<b>7 hours</b>									
Consensus introduction -Consensus in a Bitcoin network - Distributed Consensus, Merkle Patricia Tree, Gas Limit, Transactions and Fee, Anonymity, Reward, Chain Policy, Life of Blockchain application, Soft & Hard Fork, Private and Public blockchain - Nakamoto consensus, Proof of Work, Proof of Stake, Proof of Burn, Difficulty Level, Sybil Attack, Energy utilization and alternate.											
<b>Module:4</b>	<b>Hyper Ledger Fabric &amp; Etherum</b>	<b>7 hours</b>									
Architecture of Hyperledger fabric v1.1-Introduction to hyperledger fabric v1.1, chain code-Ethereum: Ethereum network, EVM, Transaction fee, Mist Browser, Ether, Gas, Solidity, Smart contracts, TruffleDesign and issue Crypto currency, Mining, DApps, DAO											
<b>Module:5</b>	<b>Smart Contracts</b>	<b>7 hours</b>									
Smart Contract Basics - Processing Smart Contracts - Deploying Smart Contracts - Solidity: Structure, Basic Data Types & Statements, Access Modifiers & Applications - Best Practices: Evaluating Smart Contracts											
<b>Module:6</b>	<b>Blockchain Applications</b>	<b>5 hours</b>									
Blockchain and Enterprise - Use Case: Blockchains for Trade Finance, Blockchains for Supply Chain Financing, Cross Border Connectivity - Trusted Data Transfer, Capital Markets, Government Services & Sustainable Livelihood, Ownership and property rights, Internet of Things, Medical Record Management System, Domain Name Service and future of Blockchain											

<p>- Blockchain Tradeoffs across Multichain, Ripple, Corda, EOS &amp; Cosmos Facebook Libra &amp; Corporate Currencies - CBDC &amp; its paradoxes</p>		
<b>Module:7</b>	<b>Blockchain Challenges and Constraints</b>	<b>3 hours</b>
Blockchain risks - Technological challenges - Standards - Scalability issues - Security and privacy - Legal and regulatory problems - Social and cultural constraints - The future of blockchain technology, AI, and digital privacy		
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
	<b>Total hours:</b>	<b>45 hours</b>
<b>Text Book(s)</b>

<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>			1.0						
<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To introduce the essential software engineering concepts involved</li> <li>2. To impart skills in the design and implementation of efficient software systems across disciplines</li> <li>3. To familiarize engineering practices and standards used in developing software products and components</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. Apply the principles of the engineering processes in software development.</li> <li>2. Demonstrate software project management activities such as planning, scheduling and Estimation.</li> <li>3. Model the requirements for the software projects.</li> <li>4. Design and Test the requirements of the software projects.</li> <li>5. Implement the software development processes activities from requirements to validation and verification.</li> <li>6. Apply and evaluate the standards in process and in product.</li> </ol>											
<b>Student Learning Outcomes (SLO):</b>		<b>1,5,6</b>									
<b>Module:1</b>	<b>Overview of Software Engineering</b>	<b>5 hours</b>									
Introduction to Software Engineering - Software Development Life Cycle-Process Models in Software Testing											
<b>Module:2</b>	<b>Testing Tools &amp; Measurement</b>	<b>4 hours</b>									
Introduction to Requirements Engineering Process - System Modeling - Requirement Validation- Introduction to Software Testing- Failure, Error, Fault, Defect, Bug Terminology- Skills for Software Tester- Limitations of Manual Testing and Need for Automated Testing Tools- Features of Test Tool: Guideline for Static and Dynamic Testing Tool- Advantages and Disadvantages of Using Tools- Selecting a Testing Tool- When to Use Automated Test Tools, Testing Using Automated Tools-What are Metrics and Measurement: Types of Metrics, Project Metrics, Progress and Productivity Metrics.											
<b>Module:3</b>	<b>Software Design &amp; Defect Management</b>	<b>6 hours</b>									
Design Concepts- Formal Specifications- Verifying the implementation against the specification- Introduction, Defect Classification-Defect Management Process-Defect Life Cycle, Defect Template- Estimate Expected Impact of a Defect, Techniques for Finding Defects, Reporting a Defect-Test Coverage-Traceability Matrix.											
<b>Module:4</b>	<b>Software Verification &amp; Validation</b>	<b>6 hours</b>									
Introduction to Verification and Validation-Software Inspection-Automatic Static Analysis											
<b>Module:5</b>	<b>Software Testing &amp; Levels of Testing</b>	<b>6 hours</b>									
Testing-Types of Testing - Test Plan- Test Design- Test Review- Software Testing Fundamentals. General characteristics of testing, seven principles of testing.											
<b>Module:6</b>	<b>Test Selection &amp; Minimization for Regression Testing</b>	<b>8 hours</b>									
Regression testing- Regression test process-Initial Smoke or Sanity test- Selection of regression tests- Execution Trace- Dynamic Slicing- Test Minimization- Tools for regression testing- Ad hoc Testing: Pair testing- Exploratory testing- Iterative testing- Defect seeding.											
<b>Module:7</b>	<b>Software Quality &amp; Reliability</b>	<b>8 hours</b>									
Software Quality and Reliability-Software defects tracking- Test Planning, Management, Execution and Reporting- Software Test Automation: Scope of automation- Design & Architecture for automation- Generic requirements for test tool framework- Test tool selection, Testing in Object Oriented Systems-Software Metrics.											

<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
	<b>Total Lecture hours:</b>	<b>45 hours</b>

		<b>3</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>Nil</b>				<b>Syllabus version</b>	
						<b>1.0</b>

**Course Objectives:**

1. To understand the importance of software project management and identify main stages and stakeholders of a software project
2. To explain the purpose of a project's planning documents and construct the scope statement and the work breakdown structure
3. To portray how the software can assist in project management and articulate what is involved in quality assurance, planning and control on projects
4. To demonstrate RUP, Microsoft project 2010 & open source software project management tools

**Course Outcome:**

At the end of course student should be able to

1. Actively participate or successfully manage a software development project by applying project management concepts
2. Demonstrate knowledge of project management terms and techniques
3. Analyze the Steps involved in analyzing the Software projects and concepts to meet the estimation of the software Projects.
4. Work on Microsoft project, IBM RUP & open source software project management tools.
5. Estimate the organizing team based on industry exposure.

**Student Learning Outcomes (SLO):** **2,12,13**

<b>Module:1</b>	<b>Introduction to Project Management</b>	<b>7 hours</b>
-----------------	---	----------------

Importance of software project management - Stages of Project - The Stakeholder of Project - Project Management Framework - Software Tools for Project Management – Microsoft Project 2010 – Software projects versus other types of project – Contract management and technical project management

<b>Module:2</b>	<b>Project Planning</b>	<b>6 hours</b>
-----------------	-------------------------	----------------

Integration Management: Project Plan Development - Plan Execution Scope Management: Methods for Selecting Projects - Project Charter - Scope Statement - WBS. Stepwise Project Planning: Main Steps in Project Planning Use of Software to Assist in Project Planning Activities

<b>Module:3</b>	<b>Project Scheduling</b>	<b>7 hours</b>
-----------------	---------------------------	----------------

Time Management: Importance of Project Schedules - Schedules and Activities - Sequencing and Scheduling Activity Project Network Diagrams: Network Planning Models - Duration Estimating and Schedule Development - Critical Path Analysis - Program Evaluation and Review Technique (PERT) Use of Software to Assist in Project Scheduling Activities - Software Metrics for Project Management: Metrics Sets for Project Management

<b>Module:4</b>	<b>Software Risk Management</b>	<b>7 hours</b>
-----------------	---------------------------------	----------------

Perspectives of Risk Management - Risk Definition – Risk Categories – Risk Assessment: Approaches, techniques and good practices – Risk Identification / Analysis / Prioritization – Risk Control (Planning / Resolution / Monitoring) – Risk Retention – Risk Transfer - Failure Mode and Effects Analysis (FMEA) – Operational Risks – Supply Chain Risk Management.

<b>Module:5</b>	<b>Project Cost Management</b>	<b>5 hours</b>
-----------------	--------------------------------	----------------

Project Cost Management: Importance and Principles of Project Cost Management - Resource Planning - Cost Estimating - Cost Budgeting - Cost Control - Use of Software to assist in Cost Management

<b>Module:6</b>	<b>Software Quality Management</b>	<b>5 hours</b>
Project Quality: Stages of Software Quality Management - Quality Planning - Quality Assurance - Quality Control – Quality Standards – Tools for Quality control		
<b>Module:7</b>	<b>People Management</b>	<b>6 hours</b>
Leadership styles – Developing Leadership skills – Leadership assessment – Motivating People – Organizational strategy – Management – Team building – Delegation – Art of Interviewing People - Team Management – Rewarding - Client Relationship Management - Organizational behavior: a background, Selecting the right person for the job –Instruction in the best methods– The Oldham-Hackman job characteristics model		
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
	<b>Total hours</b>	<b>45 hours</b>
<b>Text Book(s)</b>

<b>CSI3016</b>	<b>Robotics: Machines and Controls</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>				
		1.0				

**Course Objectives:**

1. To introduce the parts of robots, basic working concepts and types of robots
2. To make the students familiar with machine operations using robots
3. To discuss the applications and implementation of robot control systems

**Course Outcome:**

1. Explain the working principle of robots
2. Analyze the purpose of various sensor in robot for automation
3. Design and develop the robotic arm to handle the materials and machines
4. Understand the robot programming for control engineering
5. Conduct and design the experiments for various robot control operations

**Student Learning Outcomes (SLO):** **1,9,14**

<b>Module:1</b>	<b>Introduction</b>	<b>3 hours</b>
-----------------	---------------------	----------------

History of robots, robotics and programmable automation, laws of robotics, anatomy of robots, specifications of robots, Applications of robots, machine intelligence and flexible automation safety measures in robotics, AI in Robotics.

<b>Module:2</b>	<b>Robot Kinematics</b>	<b>7 hours</b>
-----------------	-------------------------	----------------

Introduction, forward and reverse kinematics, robot arm and degrees of freedom, homogeneous transformation and DH parameters, dynamics of robot arm, kinematics of mobile robot

<b>Module:3</b>	<b>Actuators and Control</b>	<b>6 hours</b>
-----------------	------------------------------	----------------

Robot drive system, functions of drive systems, pneumatic systems, electrical drives, DC motor, stepper motor, servo motor, need of sensing systems, types of sensors, robot vision system, robot end effectors, drive system for grippers, types of grippers, gripper design for machine control operations

<b>Module:4</b>	<b>Introduction to Mechatronics</b>	<b>6 hours</b>
-----------------	-------------------------------------	----------------

Manufacturing industry, the changing environment, automation and mechatronics applications, flexible automation, CAD/CAM and CNC machine tools, Flexible manufacturing systems(FMS), robots in FMS

<b>Module:5</b>	<b>Programmable Logic Controllers</b>	<b>6 hours</b>
-----------------	---------------------------------------	----------------

Introduction, basic structure of PLC, PLC classification, PLC operation, loading and unloading parts by robot, PC based controller introduction

<b>Module:6</b>	<b>Servo control in a Robot</b>	<b>6 hours</b>
-----------------	---------------------------------	----------------

Control loops, principles of servo control in a robot, PID control aspects, processor controlled digital servo system, introduction to transfer functions

<b>Module:7</b>	<b>Applications of Robots</b>	<b>9 hours</b>
-----------------	-------------------------------	----------------

Industrial control systems, introduction to automation, basic elements of automation, levels of automation, material handling and identification, production planning and control systems, introduction to quality control and inspection technologies,

<b>Module:8</b>	<b>Recent trends</b>	<b>2 hours</b>
-----------------	----------------------	----------------

**Total Lecture hours:** **45 hours**

**Text Book(s)**

<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. Learn the fundamental of advanced data compression techniques</li> <li>2. To introduce students to basic applications, concepts, and techniques of Data Compression.</li> <li>3. To develop skills for using recent data compression software to solve practical problems in a variety of disciplines.</li> <li>4. To gain experience doing independent study and research.</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. Understand the importance of Data compression</li> <li>2. Comprehend the idea of lossless and lossy compression</li> <li>3. Understand the most common file formats for image, sound and video</li> <li>4. Develop a reasonably sophisticated data compression application.</li> <li>5. Select methods and techniques appropriate for the task</li> <li>6. Develop the methods and tools for the given task</li> </ol>											
<b>Student Learning Outcomes (SLO):</b>		<b>2, 9, 17</b>									
<b>Module:1</b>	<b>Introduction</b>	<b>7 hours</b>									
Introduction to Compression techniques – Modeling and coding – Mathematical preliminaries for Lossless compression – Entropy – Information Value – Data Redundancy - Application of compression											
<b>Module:2</b>	<b>Basic Concepts of Information Theory</b>	<b>6 hours</b>									
Concepts of information theory – Models and Coding – Algorithmic information theory – Physical Models – Probability models – Markov models.											
<b>Module:3</b>	<b>Arithmetic Coding</b>	<b>6 hours</b>									
Shannon-Fano Algorithm – Huffman Algorithm – Adaptive Huffman Coding – Golomb codes – Rice codes – Tunstall codes – Applications of Huffman coding.											
<b>Module:4</b>	<b>Loss Less Coding</b>	<b>6 hours</b>									
Dictionary Methods: LZ77, LZ78, LZW Algorithms – Lossless Compression standards zip, gzip, bzip, unix compress, GIF, JBIG – Dynamic Markoy Compression.											
<b>Module:5</b>	<b>Basics Of Lossy Coding &amp;Vector Quantization</b>	<b>6 hours</b>									
Basics of lossy coding and mathematical concepts – Distortion criteria – Scalar quantization – The Quantization problem – Uniform quantizer – Adaptive quantization – Advantages of vector quantization over scalar quantization – LBG algorithm.											
<b>Module:6</b>	<b>Image &amp; Video Compression</b>	<b>6 hours</b>									
Image Compression: Discrete Cosine Transform – JPEG – Video Compression: Motion Compensation – Temporal and Spatial Prediction - MPEG and H.264.											
<b>Module:7</b>	<b>Wavelet Based Compression</b>	<b>6 hours</b>									
Fundamentals of wavelets –Various standard wavelet bases – Multi resolution analysis and scaling function – JPEG 2000.											
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>									
<b>Total Lecture hours:</b>		<b>45 hours</b>

		3	0	0	0	3
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>				
		1.0				

**Course Objectives:**

1. To understand the fundamental concepts and techniques of Graphs.
2. To comprehend the concepts of various graph algorithms
3. The module covers advanced material on graph algorithms with emphasis on efficient algorithms, and explores their use in a variety of application areas.
4. To understand the mathematical approaches of solving graph algorithms with the help of fundamental data structures.

**Course Outcome:**

1. Acquire the concept of conceptual and operations, properties on graphs.
2. Learn the concept of various graph algorithms and its uses.
3. Obtain the knowledge of Exponential algorithm
4. Analyze the graph classes and parameter Algorithm.
5. Implement the concepts approximation on various graph algorithms.

**Student Learning Outcomes (SLO):**      **1, 5, 9**

<b>Module:1</b>	<b>Basics of Graph and Operations</b>	<b>4 hours</b>
-----------------	---------------------------------------	----------------

Fundamental concepts - basic definitions of graphs and digraphs -Subgraphs and other graph types-Representing graphs as matrices- Graph transformation - operations, properties, proof styles

<b>Module:2</b>	<b>Graph Algorithms</b>	<b>6 hours</b>
-----------------	-------------------------	----------------

Elementary Graph Algorithms -Representations of graphs - Breadth-first search - Depth-first search -Topological sort - Strongly connected components -Representing graphs in a computer - Minimum Spanning Trees - Growing a minimum spanning tree - The algorithms of Kruskal and Prim .

<b>Module:3</b>	<b>Shortest Path Algorithm</b>	<b>5 hours</b>
-----------------	--------------------------------	----------------

Single-Source Shortest Paths - The Bellman-Ford algorithm - Single-source shortest paths in directed acyclic graphs - Dijkstra's algorithm -Difference constraints and shortest paths - Proofs of shortest-paths properties - All-Pairs Shortest Paths -Shortest paths and matrix multiplication - The Floyd-Warshall algorithm - Johnson's algorithm for sparse graphs .

<b>Module:4</b>	<b>Maximum Flow</b>	<b>5 hours</b>
-----------------	---------------------	----------------

Maximum Flow - Flow networks - The Ford-Fulkerson method - Maximum bipartite matching - Push-relabel algorithms - The relabel-to-front algorithm.

<b>Module:5</b>	<b>Exponential Algorithm</b>	<b>7 hours</b>
-----------------	------------------------------	----------------

Independent set-Chromatic Number-Domatic Partition-The travelling Salesman Problem-Set Cover- Dominating Set-Subset Sum.

<b>Module:6</b>	<b>Graph Classes and Fixed Parameter Algorithms</b>	<b>8 hours</b>
-----------------	---	----------------

Perfect Graph-Cographs-Distance Hereditary graph-Chordal Graphs-Interval Graph- Permutation graphs-Vertex Cover-Kernel of Vertex cover-Minimum fill in-Homogeneous colouring of perfect graph.

<b>Module:7</b>	<b>Approximation Algorithms</b>	<b>8 hours</b>
-----------------	---------------------------------	----------------

Approximation Algorithms - The vertex-cover problem - The traveling-salesman problem - The set-covering problem - Randomization and linear programming - The subset-sum problem

<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>
-----------------	----------------------	----------------

<b>Total hours:</b>	<b>45 hours</b>
---------------------	-----------------

<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. Introduce the recent trends in the field of Computer Architecture and identify performance related parameters.</li> <li>2. Apply fundamental techniques to speed-up program execution.</li> <li>3. Expose the different types of multicore architectures and Programming.</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. Understand the organization and performance characteristics of modern computer architectures.</li> <li>2. Interpret techniques to improve processor's ability to exploit Instruction Level Parallelism.</li> <li>3. Point out how data level and thread level parallelisms is exploited in architectures.</li> <li>4. Identify characteristics and challenges in multiprocessor and multicore architectures.</li> <li>5. Develop parallel programming for computer problems.</li> </ol>											
<b>Student Learning Outcomes (SLO):</b>		2, 12, 14									
<b>Module:1</b>	<b>Introduction to Advanced Computer Design</b>	<b>5 hours</b>									
Fundamentals of Computer Design- Fundamentals of RISC, CISC architecture- Data path implementation-Single cycle Data path- Multi cycle data path-Multi cycle Instruction execution-Instruction Scheduling.											
<b>Module:2</b>	<b>Instruction Level Parallelism</b>	<b>8 hours</b>									
Introduction to Instruction Level Parallelism – Concepts and Challenges – Advanced Branch Prediction - Dynamic Scheduling – Static scheduling- Hardware-Based Speculation – Multithreading - Limitations of ILP.											
<b>Module:3</b>	<b>Data Level Parallelism</b>	<b>5 hours</b>									
Vector architecture – SIMD extensions – Graphical Processing Units and applications – Loop level parallelism.											
<b>Module:4</b>	<b>Multi-Threading Concepts</b>	<b>6 hours</b>									
Basic concepts of threading- Concurrency, Parallelism -Threading design concepts for developing an application- Correctness Concepts: Critical Region, Mutual exclusion, Synchronization, Race Conditions- Performance Concepts: Simple Speedup, Computing Speedup, Efficiency , Granularity , Load Balance											
<b>Module:5</b>	<b>Multi-Processor Architecture</b>	<b>6 hours</b>									
Need for multi-core architectures, Architecting with multi-cores, Homogenous and heterogeneous cores, Shared resources, shared busses, and optimal resource sharing strategies. Performance evaluation of multi-core processors, Error management											
<b>Module:6</b>	<b>Multi core architecture</b>	<b>7 hours</b>									
Introduction- Centralized, Symmetric and Distributed Shared Memory Architectures –Cache Coherence Issues – Performance Issues – Synchronization – Models of Memory Consistency											
<b>Module:7</b>	<b>Multi Core and GPU Programming</b>	<b>6 hours</b>									
Multi core programming using OpenMP, OpenMP Directives, Parallel constructs, Work-sharing constructs, Data environment constructs, Synchronization constructs											
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>									
		<b>Total hours:</b> <b>45 hours</b>

<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>									
		1.0									
<b>Course Objectives:</b>											
<p>1. To learn the concepts of number theory, Information and Network Security</p> <p>2. To learn the basics of cryptography and cryptographic techniques.</p> <p>3. To familiarize with various cyber threats, attacks, vulnerabilities, defensive mechanisms, security policies, practices</p> <p>4. To learn how to implement application level security</p>											
<b>Course Outcome:</b>											
<p>After successfully completing the course the student should be able to</p> <p>1. Know the fundamental mathematical concepts related to security</p> <p>2. Know the basic concepts of information and network security</p> <p>3. Understand and implement the cryptographic techniques and know the real time applications of various cryptographic techniques.</p> <p>4. Know fundamentals of cybercrimes and the cyber offenses.</p> <p>5. Understand the cyber threats, attacks, vulnerabilities and its defensive mechanisms</p> <p>6. Design suitable security policies and know about the industry practices</p>											
<b>Student Learning Outcomes (SLO):</b>	<b>1,5,9</b>										
<b>Module:1</b>	<b>Number Theory Basics</b>	<b>5 hours</b>									
Finite Fields and Number Theory: Algebraic Structures(Groups)-Modular arithmetic – GCD using Euclidian Algorithm – Primality Testing – Fermat's and Euler's theorem –Chinese Remainder theorem – Discrete Logarithms											
<b>Module:2</b>	<b>Information and Network Security</b>	<b>6 hours</b>									
Introduction-Computer Security-Information Security-Security Threats and Vulnerabilities – Security Services – Security Mechanisms- Model for Network Security											
<b>Module:3</b>	<b>Cryptography Basics and Techniques</b>	<b>6 hours</b>									
Basics of Cryptography- Symmetric key cryptographic techniques: Introduction to Stream cipher – Block cipher: DES – AES-Asymmetric key cryptographic techniques: principles – RSA – ElGamal - Elliptic Curve cryptography – Key distribution and Key exchange protocols.											
<b>Module:4</b>	<b>Cybercrimes and Cyber offenses</b>	<b>7 hours</b>									
Classification of cybercrimes, Planning of attacks, Social Engineering:Human based, Computer based, Cyberstalking, Cybercafe and Cybercrimes											
<b>Module:5</b>	<b>Cyber Threats, Attacks and Prevention:</b>	<b>7 hours</b>									
Phishing – Password cracking – Keyloggers and Spywares – DoS and DDoS attacks – SQL Injection- Identity Theft (ID) : Types of identity theft – Techniques of ID theft											
<b>Module:6</b>	<b>Cybersecurity Policies and Practices</b>	<b>7 hours</b>									
What security policies are – Determining the policy needs – Writing security policies – Internet and email security policies – Compliance and Enforcement of policies- Review											
<b>Module:7</b>	<b>Application Security</b>	<b>5 hours</b>									
Security Architectures and Models- Email security-PGP and SMIME, Web Security, Database Security-Wireless Network Security											
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>									
<b>Total Lecture hours:</b>											
<b>45 hours</b>

Identify suitable transport layer protocols for real-time applications.</li> <li>5. Identify the suitable application layer protocols for specific applications.</li> </ol>											
<b>Module:1</b>	<b>Introduction and Underlying Network Technologies</b>	<b>6 hours</b>									
The motivation for Internetworking, The TCP/IP Internet, Internet Services, History and Scope of the Internet, The Internet Architecture Board, The IAB reorganization, The Internet Society, Internet Request For Comments, Internet Protocols and Standardization, Future growth and technology. Two approaches to network communication, Wide Area and Local Area Networks, Ethernet technology											
<b>Module:2</b>	<b>Internetworking concept and Architecture Model</b>	<b>4 hours</b>									
Introduction, Application-level Interconnection, Network-Level Interconnection, Properties of the Internet, Internet Architecture, Interconnection through IP routers.											
<b>Module:3</b>	<b>Network Layer</b>	<b>8 hours</b>									
Switching, Packet Switching at the network layer, network layer services, other network layer issues, IPv4 addresses - Classful addressing, Classless addressing, special addresses, NAT, Datagrams, fragmentation, options, checksum, IPv6 Addresses.											
<b>Module:4</b>	<b>Internet Protocol</b>	<b>5 hours</b>									
IPv4 - Datagram, Fragmentation, Options, Checksum, Security, IPv6 Protocol - Introduction, Packet format, Transition from IPv4 to IPv6.											
<b>Module:5</b>	<b>Unicast Routing Protocols</b>	<b>7 hours</b>									
Introduction, Intra and Interdomain routing, Distance vector routing, RIP, Link state routing, OSPF, Path vector routing, BGP.											
<b>Module:6</b>	<b>Transport Layer</b>	<b>8 hours</b>									
User Datagram, UDP services, UDP applications, TCP services, TCP features, Segment, A TCP Connection, Windows in TCP, Flow control, Error control, Congestion control.											
<b>Module:7</b>	<b>Application layer</b>	<b>5 hours</b>									
Client-Server paradigm, Peer-to-Peer paradigm, DHCP operation, Configuration, TELNET, SSH, SNMP – Concept, Management components, SMI, MIB, SNMP.

<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>			<b>1.0</b>								
<b>Course Objectives:</b>													
<ol style="list-style-type: none"> <li>1. To understand the fundamental concepts on quantum computing.</li> <li>2. To learn how to do computations using quantum algorithms.</li> <li>3. To perform reliable and secure information processing in quantum applications.</li> </ol>													
<b>Course Outcome:</b>													
At the end of the course, the student can													
<ol style="list-style-type: none"> <li>1. Understand the basic concepts on quantum computing.</li> <li>2. Familiarize with the algebraic notation used in the frameworks of quantum mechanics.</li> <li>3. Design a simple quantum circuit model of computations.</li> <li>4. Able to implement quantum basic and search algorithms for performing computations on quantum computers.</li> <li>5. Able to control the noise in quantum information processing systems and also able to do quantum information processing reliably in the presence of noise.</li> </ol>													
<b>Module:1</b>	<b>Introduction to Quantum Computing</b>	<b>5 hours</b>											
History of quantum computation and quantum information – The Circuit Model of Computation - A Linear Algebra Formulation of the Circuit Model - Reversible Computation - Quantum Physics and Computation - Quantum bits: Multiple qubits.													
<b>Module:2</b>	<b>Linear Algebra and the Framework of Quantum Mechanics</b>	<b>7 hours</b>											
The Dirac Notation and Hilbert Spaces - Dual Vectors – Operators - The Spectral Theorem - Functions of Operators - Tensor Products - The Schmidt Decomposition Theorem - The State of a Quantum System - Time-Evolution of a Closed System - Composite Systems – Measurement - Mixed States and General Quantum Operations.													
<b>Module:3</b>	<b>Quantum Model of Computation</b>	<b>7 hours</b>											
The Quantum Circuit Model - Quantum Gates - 1-Qubit Gates - Controlled-U Gates - Universal Sets of Quantum Gates - Efficiency of Approximating Unitary Transformations - Implementing Measurements with Quantum Circuits – Quantum Communication Protocols: Superdense Coding - Quantum Teleportation - An Application of Quantum Teleportation													
<b>Module:4</b>	<b>Quantum Algorithms</b>	<b>5 hours</b>											
Probabilistic Vs Quantum Algorithms - Deutsch's algorithm - The Deutsch–Jozsa algorithm – Simon's Algorithm.													
<b>Module:5</b>	<b>Quantum Search Algorithms</b>	<b>6 hours</b>											
Introduction and the procedure - Geometric visualization - Performance - Quantum search as a quantum simulation - Quantum counting - Speeding up the solution of NP-complete problems - Quantum search of an unstructured database - Optimality of the search algorithm.													
<b>Module:6</b>	<b>Quantum Information</b>	<b>7 hours</b>											
Quantum noise and quantum operations - Classical noise and Markov processes - Quantum operations – Examples – Applications – Limitations													
<b>Module:7</b>	<b>Quantum Error Correction</b>	<b>6 hours</b>											
Introduction – The Shor code - Theory of quantum error-correction – Constructing quantum codes – Stabilizer codes - Fault-tolerant quantum computation													
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>

Evaluate efficiency trade-offs among alternative Communication models for pervasive computing applications</li> <li>3. Comprehend advanced Pervasive computing Applications and Technologies from the basics of pervasive computing</li> <li>4. Understand working principles of various pervasive concepts for different platforms</li> <li>5. Compare various application business models of different domains</li> <li>6. Estimate the cost of hardware and software for low cost design pervasive computing Applications</li> </ol>										
<b>Module:1</b>	<b>Pervasive Computing Concepts</b>	<b>7 hours</b>								
Key Characteristics of Pervasive computing and its applications, Brief overview on sequential computing, parallel computing, distributed computing, grid computing, cloud computing, Location in ubiquitous computing, Context-aware computing, wearable computing, The Structure and Elements of Pervasive Computing Systems.										
<b>Module:2</b>	<b>Hardware Components, Platforms and Technologies</b>	<b>7 hours</b>								
Processor, Operating System: Android, iOS, Windows Mobile OS, BlackBerry OS; Displays: TFT LCD, IPS LCD, Retina Display, Touch Screen LCD, Resistive LCD, Capacitive LCD, OLED, OMLED, Super OMLED,, Haptic/Tactile, Gorilla Glass, Memory, Input, Connectivity, Extensibility, Camera, Enterprise Applications: Wireless Devices, Enterprise Applications, Wireless Technologies, Enterprise Architecture; Network Protocols and technologies: programming strategies, Mobile Communication Technologies: GSM , CDMA , LTE, Device and Communication characteristics, Basic terminology of the cellular telecommunication networks, Multiplexing, Switching, Technologies, Cellular Networks, GSM.										
<b>Module:3</b>	<b>Location Awareness in Pervasive Computing</b>	<b>7 hours</b>								
Network-centric approaches: Cell of Origin (COO), Angle of Arrival (AOA), E-OTD (Enhanced Observed Time Difference), Time of Arrival (TOA); Handset-centric Approaches: GPS ( Global Position System)Services, GPS Architecture, Algorithms, DGPS, Hybrid Methods: GPS & Cell ID; Indoor Locations: Location Based on 802.11, Localization Accuracy Applications & Services, challenges.										
<b>Module:4</b>	<b>Context Aware (CA) Computing</b>	<b>9 hours</b>								
Definitions, Services, Principles of CA , The Context life-cycle, Architectures and Use-cases, Issues & Research challenges, Localization algorithms and technologies, APIs for Location-based services, Location-aware services, Location Intelligence & Spatial Data, types of spatial data analysis, APIs for Location-based services, Privacy in Location Aware Systems, Neighbor Awareness.										
<b>Module:5</b>	<b>Wearable Computing</b>	<b>4 hours</b>								
Factors in Wearable Technology, challenges, wearable Devices, Inputs, Applications, Algorithms, Classification of Wearable Devices based on Function and Creation.										
<b>Module:6</b>	<b>Affective Computing</b>	<b>5 hours</b>								
Definitions, Use cases, emotions descriptions, affective data model, affective computing terminologies, Affective Tools.										

<b>Module:7</b>	<b>The Web of Things (WoT)</b>	<b>4 hours</b>
WoT, Basic Ideas, Communication Stack, WoT Architecture: Proxy-in, Proxy-out, Device Management, Data Processing, End User Service Creation, Use Case: Smart Home, Cross Domain.		
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
<b>Total Lecture hours:</b>		<b>45 hours</b>
<b>Text Book(s)</b>

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar		
Recommended by Board of Studies	25-10-2021	
Approved by Academic Council	No. 64	Date 16-12-2021

<b>CSI4001</b>	<b>Natural Language Processing and Computational Linguistics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>				
		3	0	0	4	4				
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>				1.0				
<b>Course Objectives:</b>										
<ol style="list-style-type: none"> <li>1. To familiarize the concepts and techniques of Natural language Processing for analyzing words based on Morphology and CORPUS.</li> <li>2. To relate mathematical foundations, Probability theory with Linguistic essentials such as syntactic and semantic analysis of text.</li> <li>3. To apply the Linguistic methods and cutting-edge research models from deep learning.</li> </ol>										
<b>Course Outcome:</b>										
<ol style="list-style-type: none"> <li>1. Apply the principles and Process of Human Languages such as English and other Indian Languages using computers.</li> <li>2. Realize semantics and pragmatics of English language for text processing</li> <li>3. Create CORPUS linguistics based on digestive approach (Text Corpus method)</li> <li>4. Check current methods for statistical approaches to machine translation.</li> <li>5. Perform POS tagging for a given natural language and Select a suitable language modelling technique based on the structure of the language.</li> <li>6. Demonstrate the state-of-the-art algorithms and techniques for text-based processing of natural language with respect to morphology.</li> <li>7. Develop a Statistical Methods for Real World Applications and explore deep learning based NLP.</li> </ol>										
<b>Module:1</b>	<b>Overview of NLP</b>	<b>4 hours</b>								
Introduction and Basic Text Processing – What we do in NLP, Why NLP is hard, empirical laws and text processing, Ambiguity and uncertainty in language, The Turing test. Introduction to NLTK (Natural Language Tool Kit)										
<b>Module:2</b>	<b>Text Processing</b>	<b>6 hours</b>								
Introduction to Corpora, Corpora Analysis, word and sentence segmentation, edit distance-weighted edit distance, dynamic programming edit distance, spelling correction – non-word spelling errors, real world spelling errors, noisy channel model - introduction, real-world spell correction.										
<b>Module:3</b>	<b>N-Gram Language models</b>	<b>8 hours</b>								
Introduction - Probabilistic language model and its application (speech recognition, machine translation, completion prediction), Probabilistic language modeling – chain rule – markov assumption, N-Gram model – computing unigram, bigram, trigram probabilities, Evaluation of language models (extrinsic and intrinsic), smoothing – Laplace smoothing, Add-k smoothing.										
<b>Module:4</b>	<b>Morphology and Context free grammar</b>	<b>7 hours</b>								
Morphology – Allomorphs, bound & free morphemes, stems and affixes, types of affixes, content and functional morphemes, Inflectional and derivational morphology, morphology processing, finite state automaton(FSA), morphological analysis – Linguistic and engineering approach, Constituency, CFG definition - use and limitations. Chomsky Normal Form. Top-down parsing, bottom-up parsing.										
<b>Module:5</b>	<b>Part of speech tagging</b>	<b>7 hours</b>								
The concept of parts-of-speech, examples, usage. The Penn Treebank and Brown Corpus, Generative vs conditional models, Hidden Markov Models for POS Tagging, Viterbi Algorithm, maximum entropy model, conditional random fields (CRF).										
<b>Module:6</b>	<b>Lexical Semantics</b>	<b>6 hours</b>								
Introduction to lexical semantics (Homonymy, polysemy, synonymy, antonymy, hypernymy,										

hyponymy, meronymy) , wordnet – synsets, lemma vs synsets, word similarity – Thesaurus based word similarity, path-based similarity, concept probability models, information content , resnik similarity, lin similarity, jiang-conrath similarity , word sense disambiguation – random walk algorithm.

<b>Module:7</b>	<b>Application of NLP</b>	<b>5 hours</b>
Machine Translation - Comparing Machine Translation and Human Translation: A Case Study, Information Extraction - Extracting Information from Structured Normal Documents: A Case Study, Text Summarization - Text Classification using Text Summarization– A case study, Sentiment Analysis - Case Study : Sentiment analysis using Python.		
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
	<b>Total Lecture hours:</b>	<b>45 hours</b>

#### **Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar**

##### **Sample J Component projects:**

###### **1. Sentiment Analysis:**

Sentiment analysis (also known as opinion mining or emotion AI) is the use of natural language processing, text analysis, computational linguistics, and biometrics to systematically identify, extract, quantify, and study affective states and subjective information. Sentiment analysis is widely applied to voice of the customer materials such as reviews and survey responses, online and social media, and healthcare materials for applications that range from marketing to customer service to clinical medicine.

###### **2. Chatbot:**

Advancements in NLP have increased their usefulness to the point that live agents no longer need to be the first point of communication for some customers. Some features of Chatbot include being able to help users navigate support articles and knowledge bases, order products or services, and manage accounts.

<b>CSI4002</b>	<b>Logic and Combinatorics for Computer Science</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		3	0	0	0	3
<b>Pre-requisite</b>	<b>Nil</b>				<b>Syllabus Version</b>	
					1.0	
<b>Course Objectives</b>						
<ol style="list-style-type: none"> <li>1. To impart foundations of logic and combinatorics.</li> <li>2. To apply concepts of logic in computational problems.</li> <li>3. To assess the importance of various combinatorial notions in computer science domain.</li> <li>4. To comprehend the necessity of logic, relations and functions in AI/DBMS/Data mining.</li> </ol>						
<b>Course Outcomes</b>						
<ol style="list-style-type: none"> <li>1. Understanding the fundamentals of logic.</li> <li>2. Articulating normal forms and inference rules for theorem proving.</li> <li>3. Applying the concepts predicate calculus and quantifiers for deducing rules and proofs.</li> <li>4. Developing a mathematical maturity by introducing combinatorial principles and extend them to probabilistic combinatorics.</li> <li>5. Articulating algebraic combinatorics and basics of enumeration and counting.</li> <li>6. Understanding basics of set theory, relations and functions.</li> <li>7. Appreciating the utilities of logic and combinatorics in real-world computer science.</li> </ol>						
<b>Module:1</b>	<b>Fundamentals of Logic</b>					
Statements and notations, Logical connectives- negation, conjunction, disjunction- conditional and biconditional- Statement formulas, Truth tables, Well-formed formulas, Tautologies and contradictions, Equivalence, Duality law, Tautological implications, More connectives, Two-state devices and statement logic.						
<b>Module:2</b>	<b>Advanced Logic</b>					
Normal forms, DNF, CNF, PDNF, PCNF, Ordering and uniqueness of normal forms, Theory of inference for statement calculus, Validity using truth tables.						
<b>Module:3</b>	<b>Proofs of theorems</b>					
Rules of inference, Consistency of premises and indirect method of proof, Automatic theorem proving, Use of universal and existential quantifiers in proofs of theorems.						
<b>Module:4</b>	<b>Predicate Calculus</b>					
Predicates, Statement functions, variables, quantifiers, Predicate formulas, free and bound variables, Universe of discourse, Inference theory, Valid formulas and equivalences, Valid formulas over finite universe, Valid formulas involving quantifies, Inference theory for predicate calculus, Formulas with more than one quantifier.						
<b>Module:5</b>	<b>Fundamentals of Combinatorics</b>					
Fundamental principles of counting, Rules of sum and product, Permutations, Combinations, Binomial theorem, Combinations with repetition, Basics of Discrete probability, Pigeonhole principle.						
<b>Module:6</b>	<b>Enumeration and Counting</b>					
Principles of inclusion and exclusion, Generalization, Derangements, Rook polynomials, Arrangements with forbidden positions, Generalized Permutations and Combinations, Generating Permutations and Combinations.						
<b>Module:7</b>	<b>Advanced Counting Techniques</b>					
Number sequences, Generating Functions, Exponential Generating Function, Solving Linear Homogeneous Recurrence Relations, Nonhomogeneous Recurrence Relations, Special counting sequences- Catalan numbers and Stirling numbers.						

<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 Hours</b>
	<b>Total Lecture Hours</b>	<b>45 Hours</b>
<b>Text Book(s)</b>

<b>CSI4003</b>	<b>Computer Oriented Numerical Methods</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>				
		3	0	2	0	4				
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>				<b>1.0</b>				
<b>Course Objectives:</b>										
<ol style="list-style-type: none"> <li>1. To develop the mathematical skills of the students in the areas of numerical methods.</li> <li>2. To teach theory and applications of numerical methods in many engineering subjects which require solutions of linear systems, finding eigen values, eigenvectors, interpolation and applications, solving ODEs, PDEs and dealing with statistical problems like testing of hypotheses.</li> <li>3. To lay foundation of computational mathematics for post-graduate courses, specialized studies and research.</li> </ol>										
<b>Course Outcome:</b>										
<ol style="list-style-type: none"> <li>1. Understand the use of numerical methods in modern scientific computing.</li> <li>2. Understand with finite precision Computing.</li> <li>3. Provide numerical solutions of nonlinear equations in a single variable</li> <li>4. Apply numerical interpolation and approximation of functions</li> <li>5. Apply numerical integration and differentiation</li> <li>6. Provide numerical solution of ordinary differential equations</li> <li>7. Be familiar with calculation and interpretation of errors in numerical methods.</li> </ol>										
<b>Module:1</b>	<b>Errors and Finite Differences</b>	<b>7 Hours</b>								
Error & their analysis, Computer arithmetic, Floating-point number operation. Finite differences: Difference operator, Difference tables, Factorial polynomials, Summation of series.										
<b>Module:2</b>	<b>Algebraic &amp; Transcendental Equations</b>	<b>6 Hours</b>								
Bisection method, Iteration method, method of false position, Newton-Raphson method, Rate of convergence of methods.										
<b>Module:3</b>	<b>Interpolation</b>	<b>6 hours</b>								
Newton's forward and backward interpolation, Gauss, Stirling's and Bessel's formula for equal interval, Lagrange's interpolation and Newton's divided difference formula for unequal interval.										
<b>Module:4</b>	<b>Solution to Simultaneous Linear Equations</b>	<b>6 hours</b>								
Solution of simultaneous equations by Gauss elimination method, Gauss-Seidel's method, Jacobi's method.										
<b>Module:5</b>	<b>Solution of Ordinary Differential Equations</b>	<b>6 hours</b>								
Taylor's series method, Euler's method, Modified Euler's method, Runge-Kutta method.										
<b>Module:6</b>	<b>Numerical Differentiation &amp; Integration</b>	<b>8 hours</b>								
Introduction, Numerical differentiation, Numerical integration by Trapezoidal rule, Simpson's 1/3 rule, Simpson's 3/8 rule, Boole's & Weddle's rule, Euler-Maclaurin's formula.										
<b>Module:7</b>	<b>Frequency distribution and Central Tendency</b>	<b>4 hours</b>								
Central Tendency (Only Algorithm and its Application), Dispersion-Standard Deviation, Coefficient of Variance(Only Algorithm and its Application), Correlation and regression (All Methods and Examples with Algorithm and its Application).										
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>								
		<b>Total Lecture hours:</b>

		3	0	0	0	3							
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>			<b>1.0</b>								
<b>Course Objectives:</b>													
<ol style="list-style-type: none"> <li>1. To introduce the fundamental processes and major issues in text mining.</li> <li>2. To offer adequate knowledge on extraction and summarization techniques.</li> <li>3. To understand the clustering and classification techniques.</li> <li>4. To explain the algorithms for text streams, anomaly and trend detection.</li> <li>5. To impart the knowledge on various mining concepts and techniques that can be applied to multimedia and social media.</li> <li>6. To appreciate the current trends in text mining.</li> </ol>													
<b>Course Outcome:</b>													
<ol style="list-style-type: none"> <li>1. Recognize key areas and issues in Information Extraction and Text Summarization.</li> <li>2. Discover interesting patterns using Clustering and Classification techniques.</li> <li>3. Formulate patterns using Text streams, Anomaly and trend detection.</li> <li>4. Apply text mining to multimedia and social media application.</li> <li>5. Summarize about the recent trends in text mining.</li> <li>6. Solve the test cases and implement text mining concepts in real time applications.</li> </ol>													
<b>Module:1</b>	<b>Information Extraction and Text Summarization</b>	<b>7 hours</b>											
Information Extraction - Named Entity Recognition - Relation Extraction - Unsupervised Information Extraction; Text Summarization - Topic Representation Approaches - Indicator Representations and Machine Learning.													
<b>Module:2</b>	<b>Clustering</b>	<b>8 hours</b>											
Feature Selection and transformation Methods - Distance-based Clustering Algorithms - Word and Phrase based Clustering - Probabilistic Document Clustering and Topic Models - Online Clustering with Text Streams; Multilingual document clustering - Multilingual LSA, LSA with term alignments, LMSA with term alignments.													
<b>Module:3</b>	<b>Classification</b>	<b>7 hours</b>											
Feature Selection for Text Classification, Probabilistic and Naive Bayes Classifiers, Proximity-based Classifiers, Classification of Linked and Web Data, Meta-Algorithms for Text Classification, Content-based spam email classification using machine-learning algorithms.													
<b>Module:4</b>	<b>Anomaly and Trend Detection</b>	<b>6 hours</b>											
Text Visualization techniques - Data Exploration and the search for novel patterns - Sentiment tracking - Visual analytics and FutureLens - Scenario discovery, Current research in Internet predation and cyberbullying.													
<b>Module:5</b>	<b>Text Streams</b>	<b>7 hours</b>											
Clustering and Classification of text streams, Feature extraction and data reduction - Event and trend descriptions, Embedding semantics in LDA topic models - embedding external semantics from Wikipedia - data driven semantic embedding.													
<b>Module:6</b>	<b>Text Mining in Multimedia</b>	<b>4 hours</b>											
Surrounding Text Mining, Joint Text and Visual Content Mining, Cross Text and Visual Content Mining.													
<b>Module:7</b>	<b>Text Analytics in Social Media</b>	<b>4 hours</b>											
Applying Text Analytics to Social Media, Opinion Mining and Sentiment Analysis, Text Mining Applications and Case studies.													
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>											
<b>Total Lecture hours:</b>													
<b>45 hours</b>													
<b>Text Book(s)</b>

<b>CSI4005</b>	<b>Augmented Reality and Virtual Reality</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>				
		3	0	0	4	4				
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>				<b>1.0</b>				
<b>Course Objectives:</b>										
<ol style="list-style-type: none"> <li>1. To introduce the augmented reality concepts, techniques and models.</li> <li>2. To introduce the virtual reality concepts, techniques and models.</li> <li>3. To develop augmented reality and virtual reality models.</li> </ol>										
<b>Course Outcome:</b>										
<ol style="list-style-type: none"> <li>1. Understand the fundamental of AR, VR and Mixed Reality and to design a customized solution.</li> <li>2. Familiarize on the concepts, techniques and reporting methods of AR and VR.</li> <li>3. Explore the methods used to Visualization, Interaction and Modelling in AR and VR.</li> <li>4. Explore the techniques, technologies and approaches needed for developing AR applications.</li> <li>5. Familiarize the techniques, technologies and approaches needed for developing VR applications.</li> <li>6. Developing architecture, simulation, exploration of various AR, VR and Mixed Reality Applications.</li> </ol>										
<b>Module:1</b>	<b>Introduction to basic concepts of AR and VR</b>	<b>3 hours</b>								
Introducing importance and applications of Augmented and Virtual Reality Systems. History and differences between Augmented and Virtual Reality. Basics of Computer Vision and Multimodal Interaction. Fundamental Concept and Components of Virtual Reality. Primary Features and Present Development on Virtual Reality.										
<b>Module:2</b>	<b>Augmented Reality Concepts</b>	<b>4 hours</b>								
Displays – Taxonomy, technology and features of augmented reality, Challenges with AR, AR systems and functionality- Major software and hardware components for AR – Software Architectures – Creating Augmented reality contents.										
<b>Module:3</b>	<b>Principles and Practices</b>	<b>9 hours</b>								
Augmented reality methods, visualization techniques for augmented reality, wireless displays in educational augmented reality applications, mobile projection interfaces, marker-less tracking for augmented reality, enhancing interactivity in AR environments, evaluating AR systems.										
<b>Module:4</b>	<b>Introduction to Virtual Reality</b>	<b>8 hours</b>								
Computer graphics, Real time computer graphics, Flight Simulation, The Virtual world space, positioning the virtual observer, the perspective projection, human vision, stereo perspective projection, 3D clipping, Color theory, Simple 3D modelling, Illumination models, Reflection models, Shading algorithms, Radiosity, Hidden Surface Removal, Realism Stereographic image										
<b>Module:5</b>	<b>Interactive Techniques in Virtual Reality</b>	<b>7 hours</b>								
Introduction to 2D and 3D concepts, From 2D to 3D, 3D space curves, 3D boundary representation Geometrical Transformations: Frames of reference, Modeling transformations, Instances, Picking, Flying, Scaling the VE, Collision detection Generic VR system: Introduction to Virtual environment, Computer environment, VR technology, Model of interaction, VR Systems.										
<b>Module:6</b>	<b>Visual Computation in Virtual Reality</b>	<b>6 hours</b>								
Animating the Virtual Environment: The dynamics of numbers, Linear and Nonlinear interpolation, the animation of objects, linear and non-linear translation, shape & objects, free from deformation, particle system. Physical Simulation: Introduction to simulation concepts, Objects falling in a gravitational field, Rotating wheels, Elastic collisions, projectiles, simple pendulum, springs, Flight dynamics of an aircraft.										
<b>Module:7</b>	<b>Applications of AR, VR and Mixed reality</b>	<b>6 hours</b>								

Augmented Reality Applications – Future of AR - Present and Future state of VR – Convergence of AR and VR.		
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>

<b>CSI4006</b>	<b>Game Theory</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>					
		3	0	0	0	3					
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>			<b>1.0</b>						
<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To learn the basic concepts of game theory.</li> <li>2. To use game theory concepts to model economic phenomena.</li> <li>3. To understand ideas such as dominance, backward induction and Nash equilibrium.</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. Demonstrate understanding of basic mathematical concepts in game theory</li> <li>2. Identify theoretical structures for games and learn Nash equilibria in multiple game settings</li> <li>3. Design and implement extensive games</li> <li>4. Employ solutions to Bayesian games</li> <li>5. Conceptualize problems on games with imperfect information</li> <li>6. Demonstrate with illustrative examples strictly Competitive Games and repeated games.</li> </ol>											
<b>Module:1</b>	<b>Game theory</b>				<b>3 hours</b>						
Introduction to Game theory, Rational choice, Attractions, Functions, Sequences, Probability											
<b>Module:2</b>	<b>Strategic games, Nash Equilibrium: Theory and Applications</b>				<b>6 hours</b>						
Strategic games, Examples: Prisoner's Dilemma, matching Pennies, the Stag Hunt. Nash equilibrium, Examples of Nash equilibrium, Best response functions, Dominated actions, Nash Equilibrium: Illustrations, Cournot's model of oligopoly, Bertrand's model of oligopoly, Electoral competition, War of Attrition, Auctions, Accident law.											
<b>Module:3</b>	<b>Mixed Strategies &amp; Mixed Strategy Equilibrium</b>				<b>6 hours</b>						
Mixed strategy nash equilibrium, dominated actions, Pure equilibria when randomization is allowed, Illustration: expert diagnosis, Equilibrium in a single population, Illustration: reporting a crime, Players' beliefs, Extension: Finding all mixed strategy Nash equilibria, Extension: Mixed strategy Nash equilibria of games in which each player has a continuum of actions.											
<b>Module:4</b>	<b>Extensive form Games</b>				<b>7 hours</b>						
Extensive games with perfect information: Strategies and outcomes, Nash equilibrium, Subgame perfect equilibrium, Finding subgame perfect equilibria of finite horizon games: backward induction. Illustrations: Ultimatum game, the holdup game, and agenda control, Stackelberg's model of duopoly, Buying votes, Extensions: Allowing for simultaneous moves, Illustration: entry into a monopolized industry, Discussion: subgame perfect equilibrium and backward induction.											
<b>Module:5</b>	<b>Bayesian Games and Games with Imperfect Information</b>				<b>7 hours</b>						
Bayesian Games: Motivational examples, General definitions, two examples concerning information, Cournot's duopoly game with imperfect information, providing a public good, auctions, juries. Games with Imperfect Information: Strategies, Nash equilibrium, Beliefs and sequential equilibrium, Signaling games, Illustration: conspicuous expenditure as a signal of quality, education as a signal of ability, strategic information transmission, agenda control with imperfect information.											
<b>Module:6</b>	<b>Strictly Competitive Games</b>				<b>7 hours</b>						
Strictly Competitive Games and Maxminimization, Maxminimization and Nash equilibrium, Rationalizability: Iterated elimination of strictly dominated actions, Iterated elimination of weakly dominated actions, Dominance solvability.											
<b>Module:7</b>	<b>Repeated Games</b>				<b>7 hours</b>						
Repeated games, Finitely repeated Prisoner's Dilemma, Infinitely repeated Prisoner's Dilemma,											

Strategies in an infinitely repeated Prisoner's Dilemma, Some Nash equilibria of an infinitely repeated Prisoner's Dilemma, Nash equilibria of general infinitely repeated games, Subgame perfect equilibria of general infinitely repeated games, Finitely repeated games, Variation on a theme: imperfect observability.

<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
<b>Total Lecture hours:</b>		<b>45 hours</b>
<b>Text Book(s)</b>		
1 Martin J. Osborne, An introduction to game theory, International Edition, 2012,Oxford University Press, USA.

Mode of assessment:		
Recommended by Board of Studies	25-10-2021	
Approved by Academic Council	No. 64	Date 16-12-2021

<b>CSI4007</b>	<b>GPU Programming</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>					
		3	0	0	0	3					
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>			<b>1.0</b>						
<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To understand the basics of GPU architectures.</li> <li>2. To write programs for massively parallel processors.</li> <li>3. To understand the issues in mapping algorithms for GPUs and to introduce different GPU programming models.</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. Understand the basics of GPU programming.</li> <li>2. Analyze the method of using memory and synchronization problem in GPUs.</li> <li>3. Develop a parallel programs using CUDA.</li> <li>4. Understand the error handling methodology.</li> <li>5. Demonstrate different GPU algorithms.</li> </ol>											
<b>Module:1</b>	<b>GPU Programming</b>	<b>5 hours</b>									
History, graphics processors, graphics processing units, GPGPUs - clock speeds, CPU / GPU comparisons, heterogeneity - accelerators, parallel programming, CUDA / OpenCL / OpenACC.											
<b>Module:2</b>	<b>GPU Computing</b>	<b>6 hours</b>									
Evolution of GPU Architectures – Understanding Parallelism with GPU –Typical GPU Architecture – CUDA Hardware Overview – Threads, Blocks, Grids, Warps, Scheduling – Memory Handling with CUDA: Shared Memory, Global Memory, Constant Memory and Texture Memory.											
<b>Module:3</b>	<b>GPU Memory, Synchronization and streams</b>	<b>6 hours</b>									
Memory hierarchy, DRAM / global, local / shared, private / local, textures, constant memory. Pointers, parameter passing, arrays and dynamic memory, multi-dimensional arrays. Memory consistency - Barriers (local versus global), atomics, memory fence. Synchronization across CPU and GPU. Asynchronous processing, tasks, task-dependence. Events, event-based-synchronization											
<b>Module:4</b>	<b>Cuda Programming</b>	<b>6 hours</b>									
Using CUDA – Multi GPU – Multi GPU Solutions – Optimizing CUDA Applications: Problem Decomposition, Memory Considerations, Transfers, Thread Usage, Resource Contentions.											
<b>Module:5</b>	<b>Error Handling</b>	<b>7 hours</b>									
Common Problems: CUDA Error Handling, Parallel Programming Issues, Synchronization, Algorithmic Issues, Finding and Avoiding Errors.											
<b>Module:6</b>	<b>Algorithms on GPU</b>	<b>7 hours</b>									
Parallel Patterns: Convolution, Prefix Sum, Sparse Matrix – Matrix Multiplication – Programming Heterogeneous Cluster.											
<b>Module:7</b>	<b>Developing GPU based Applications</b>	<b>6 hours</b>									
Matrix multiplication - vector reduction - matrix multiplication with tiling and shared memory – graph traversal algorithms using GPU programming. Image processing. Graph algorithms. Simulations. Deep learning											
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>									
		<b>Total Lecture hours:</b>			<b>45 hours</b>

<b>CSI4008</b>	<b>Programming Paradigms</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>							
		3	0	2	0	4							
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>			<b>1.0</b>								
<b>Course Objectives:</b>													
<ol style="list-style-type: none"> <li>1. To be able to express computational solutions in the main programming idioms.</li> <li>2. To be able to select an appropriate programming language for solving a computational problem, with justification.</li> <li>3. To know and understand the principles of functional and logic programming language.</li> <li>4. Acquire tools to choose, use, evaluate and design programming languages.</li> </ol>													
<b>Course Outcome:</b>													
<ol style="list-style-type: none"> <li>1. Understanding the concepts of evolution of programming languages.</li> <li>2. Analyzing the methods and tools to define syntax and semantics of a languages.</li> <li>3. Understanding the Control Environments and the Procedures of different languages.</li> <li>4. Interpreting the differences in the concepts of functional and logical programming languages.</li> <li>5. Developing the insights about Parallel Programming concepts.</li> </ol>													
<b>Module:1</b>	<b>Design Principles of Programming Paradigms</b>	<b>5 hours</b>											
Introduction- The Origins and Abstractions in Programming Languages - Computational Paradigms -Language Definition - Language Translation -Language Design Criteria: Efficiency, regularity, security and extensibility.													
<b>Module:2</b>	<b>Syntax, Basic semantics and Data Types</b>	<b>8 hours</b>											
Syntax: Lexical Structure of Programming Languages -Context-Free Grammars and BNFs - Parse Trees and Abstract Syntax Trees - EBNFs and Syntax Diagrams - Parsing Techniques and Tools- Basic Semantics: Semantic Functions- Declarations, Blocks, Scope and lifetime - The Symbol Table and its working mechanisms -Data Types and its mechanisms.													
<b>Module:3</b>	<b>Abstract Data Types and formal Semantics</b>	<b>6 hours</b>											
Abstract Data Types and Modules: The Algebraic Specification of Abstract Data Types-Abstract Data Type Mechanisms and Modules -Separate Compilation in C, C++ Namespaces, and Java Packages- Ada Packages -Modules in ML - Problems with Abstract Data Type Mechanisms													
Formal Semantics: A Sample Small Language- Operational Semantics -Denotational Semantics- Axiomatic Semantics- Proofs of Program Correctness.													
<b>Module:4</b>	<b>Control Expressions, Procedures and Environments</b>	<b>5 hours</b>											
Control Expressions and Statements : Expressions - Conditional Statements and Guards, Exception Handling- Procedure Definition and Activation-Procedure Semantics- Parameter Passing Mechanisms- Procedure Environments, Activations, and Allocation-Dynamic Memory Management- Exception Handling and Environments.													
<b>Module:5</b>	<b>Functional Programming</b>	<b>7 hours</b>											
Functional Programming: Programs as Functions - Scheme: A Dialect of Lisp - ML: Functional Programming with static typing -Delayed Evaluation- Haskell- Overloading.													
<b>Module:6</b>	<b>Logic Programming</b>	<b>6 hours</b>											
Logic Programming: Logic and Logic Programs - Horn Clauses -Resolution and Unification. The Language Prolog - Problems with Logic Programming													
<b>Module:7</b>	<b>Parallel Programming</b>	<b>6 hours</b>											
Parallel Programming: Introduction to Parallel Processing- Parallel Processing and Programming Languages- Threads – Semaphores- Monitors –Message Passing- Parallelism in Non-imperative Languages													
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>											

	<b>Total Lecture hours:</b>	<b>45 hours</b>

<b>CSI4009</b>	<b>Mathematical Modeling and Simulation</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>					
		3	0	0	0	3					
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>			<b>1.0</b>						
<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To understand the concept of modeling and dynamic systems.</li> <li>2. To process the mathematical model and choose a best model.</li> <li>3. To comprehend the concepts of Simulating Deterministic and Probabilistic Behavior.</li> <li>4. To recognize various simulation technique and validation technique.</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. Acquire the concept of dynamic systems and epidemic model.</li> <li>2. Learn the concept of modeling, fitting the model to data.</li> <li>3. Obtain the knowledge of Simulation modeling, Discrete modeling, Graph theory modeling, Decision theory modeling.</li> <li>4. Implement the Monte-Carlo simulation and use various techniques for simulation.</li> <li>5. Analyze the concepts of validating the technique.</li> </ol>											
<b>Module:1</b>	<b>Modeling Change</b>	<b>5 hours</b>									
Modeling Concepts - Modeling Change with Difference Equations – Solution to Dynamical Systems – Systems of Difference equations – Discrete Epidemic Model.											
<b>Module:2</b>	<b>Modeling Process and Geometric Similarity</b>	<b>5 hours</b>									
Mathematical Models – Modeling using Proportionality and Geometric Similarity.											
<b>Module:3</b>	<b>Model Fitting and experimental Modeling</b>	<b>6 hours</b>									
Fitting models to Data graphically – Analytic methods of Fitting – Choosing a Best model – Experimental Modeling – Polynomial model – Cubic Spline model.											
<b>Module:4</b>	<b>Simulation Modeling and Discrete Probabilistic Modeling</b>	<b>8 hours</b>									
Simulating Deterministic Behavior – Simulating Probabilistic Behavior – Probabilistic Modeling with Discrete Systems – Modeling component and System Reliability – Monte Carlo algorithms, random point generation, queuing models – Discrete-Event Simulation Model.											
<b>Module:5</b>	<b>Modeling using Graph Theory and Decision Theory</b>	<b>7 hours</b>									
Describing Graphs – Graph Models – Connection to Programming – Probability and Expected value – Decision Trees - Sequential Decisions and Conditional Probabilities – Decisions Using Alternative Criteria.											
<b>Module:6</b>	<b>Simulation and Techniques</b>	<b>8 hours</b>									
Bartering model, Monte-Carlo simulation, Approaches to differential equation: Heun method, Local stability theory: Bernoulli Trials, General techniques for simulating continuous random variables, simulation from Normal and Gamma distributions, simulation from discrete probability distributions, simulating a non – homogeneous Poisson Process and queuing system – MATLAB Simulink Demo.											
<b>Module:7</b>	<b>Validation Techniques</b>	<b>4 hours</b>									
Goodness of Fit Tests - The Two-Sample Problem - Validating the Assumption of a Nonhomogeneous Poisson Process.											
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>

<b>CHY1701 Engineering Chemistry</b>					<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>												
					3	0	2	0	4												
<b>Pre-requisite</b>	<b>Chemistry of 12<sup>th</sup> standard or equivalent</b>					<b>Syllabus version</b>															
						<b>1.0</b>															
<b>Course Objectives:</b>																					
<ul style="list-style-type: none"> <li>• To impart technological aspects of applied chemistry</li> <li>• To lay foundation for practical application of chemistry in engineering aspects</li> </ul>																					
<b>Expected Course Outcome:</b>																					
<ul style="list-style-type: none"> <li>• Students will be familiar with the water treatment, corrosion and its control, engineering applications of polymers, types of fuels and their applications, basic aspects of electrochemistry and electrochemical energy storage devices</li> <li>• </li> </ul>																					
<b>Student Learning Outcomes (SLO): 1,2,14</b>																					
<b>Module:1</b>	<b>Water Technology</b>		<b>5 hours</b>	<b>SLO: 1,14</b>																	
Characteristics of hard water - hardness, DO, TDS in water and their determination – numerical problems in hardness determination by EDTA; Modern techniques of water analysis for industrial use - Disadvantages of hard water in industries.																					
<b>Module:2</b>	<b>Water Treatment</b>		<b>8 hours</b>	<b>SLO:1,14</b>																	
Water softening methods: - Lime-soda, Zeolite and ion exchange processes and their applications. Specifications of water for domestic use (ICMR and WHO); Unit processes involved in water treatment for municipal supply - Sedimentation with coagulant- Sand Filtration - chlorination; Domestic water purification – Candle filtration- activated carbon filtration; Disinfection methods- Ultrafiltration, UV treatment, Ozonolysis, Reverse Osmosis; Electro dialysis.																					
<b>Module:3</b>	<b>Corrosion</b>		<b>6 hours</b>	<b>SLO: 2</b>																	
Dry and wet corrosion - detrimental effects to buildings, machines, devices & decorative art forms, emphasizing Differential aeration, Pitting, Galvanic and Stress corrosion cracking; Factors that enhance corrosion and choice of parameters to mitigate corrosion.																					
<b>Module:4</b>	<b>Corrosion Control</b>		<b>4 hours</b>	<b>SLO: 2</b>																	
Corrosion protection - cathodic protection – sacrificial anodic and impressed current protection methods; Advanced protective coatings: electroplating and electroless plating, PVD and CVD.																					
Alloying for corrosion protection – Basic concepts of Eutectic composition and Eutectic mixtures - Selected examples – Ferrous and non-ferrous alloys.																					
<b>Module:5</b>	<b>Electrochemical Energy Systems</b>		<b>6 hours</b>	<b>SLO: 1,14</b>																	
Brief introduction to conventional primary and secondary batteries; High energy electrochemical energy systems: Lithium batteries – Primary and secondary, its Chemistry, advantages and applications.																					
Fuel cells – Polymer membrane fuel cells, Solid-oxide fuel cells- working principles, advantages, applications.																					
Solar cells – Types – Importance of silicon single crystal, polycrystalline and amorphous silicon solar cells, dye sensitized solar cells - working principles, characteristics and applications.																					

<b>Module:6</b>	<b>Fuels and Combustion</b>	<b>8 hours</b>	<b>SLO: 2</b>
Calorific value - Definition of LCV, HCV. Measurement of calorific value using bomb calorimeter and Boy's calorimeter including numerical problems.			
Controlled combustion of fuels - Air fuel ratio – minimum quantity of air by volume and by weight-Numerical problems-three way catalytic converter- selective catalytic reduction of NO <sub>x</sub> ; Knocking in IC engines-Octane and Cetane number - Antiknocking agents.			
<b>Module:7</b>	<b>Polymers</b>	<b>6 hours</b>	<b>SLO: 2</b>
Difference between thermoplastics and thermosetting plastics; Engineering application of plastics - ABS, PVC, PTFE and Bakelite; Compounding of plastics: moulding of plastics for Car parts, bottle caps (Injection moulding), Pipes, Hoses (Extrusion moulding), Mobile Phone Cases, Battery Trays, (Compression moulding), Fibre reinforced polymers, Composites (Transfer moulding), PET bottles (blow moulding);			
Conducting polymers- Polyacetylene- Mechanism of conduction – applications (polymers in sensors, self-cleaning windows)			
<b>Module:8</b>	<b>Contemporary issues:</b>	<b>2 hours</b>	
Lecture by Industry Experts			
	<b>Total Lecture hours:</b>	<b>45 hours</b>	
<b>Text Book(s)</b>

Mode of Evaluation: Internal Assessment (CAT, Quizzes, Digital Assignments) & FAT			
<b>List of Challenging Experiments (Indicative)</b>		<b>SLO: 14</b>	
	Experiment title	Hours	
1.	Water Purification : Hardness estimation by EDTA method and removal by ion-exchange resin	1 h 30 min	
2.	Water Quality monitoring: Total dissolved oxygen assessment in different water samples by Winkler's method	3 h	
3.	Estimation of Sulphate for assessing water contamination by conductivity method		

4.	Material Analysis: Nickel in Nickel plated component by colorimetry Iron in carbon steel by potentiometry	3h
6.	Measurement of Retrieved water stored in smart material (hydrogel)	1 h 30 min
7.	Polymer characterization: Determination of viscosity of different natural polymer/synthetic polymers	1 h 30 min
8. 9.	Soil analysis by flame photometry: Na/K in soil & Ca in water samples	3h
10.	Preparation of a working model relevant to syllabus and its demonstration.  Examples: 1. Construction and working of electrochemical energy system – students should demonstrate working of the system. 2. Construction of dye sensitized solar cell and demonstration of its working 3. Calcium in food samples	Non-contact hours
Total Laboratory Hours		17 hours
Mode of Evaluation: Viva-voce and Lab performance & FAT

<b>CSE1001</b>	<b>PROBLEM SOLVING AND PROGRAMMING</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>0</b>	<b>0</b>	<b>6</b>	<b>0</b>	<b>3</b>
<b>Pre-requisite</b>	<b>NIL</b>	<b>Syllabus version</b>				
		<b>1.0</b>				

**Course Objectives:**

1. To develop broad understanding of computers, programming languages and their generations
2. Introduce the essential skills for a logical thinking for problem solving
3. To gain expertise in essential skills in programming for problem solving using computer

**Expected Course Outcome:**

1. Understand the working principle of a computer and identify the purpose of a computer programming language.
2. Learn various problem solving approaches and ability to identify an appropriate approach to solve the problem
3. Differentiate the programming Language constructs appropriately to solve any problem
4. Solve various engineering problems using different data structures
5. Able to modulate the given problem using structural approach of programming
6. Efficiently handle data using flat files to process and store data for the given problem

**Student Learning Outcomes (SLO):** **1, 12, 14**

		<b>List of Challenging Experiments (Indicative)</b>		
1	Steps in Problem Solving Drawing flowchart using yEd tool/Raptor Tool		4 Hours	
2	Introduction to Python, Demo on IDE, Keywords, Identifiers, I/O Statements		4 Hours	
3	Simple Program to display Hello world in Python		4 Hours	
4	Operators and Expressions in Python		4 Hours	
5	Algorithmic Approach 1: Sequential		4 Hours	
6	Algorithmic Approach 2: Selection ( if, elif, if.. else, nested if else)		4 Hours	
7	Algorithmic Approach 3: Iteration (while and for)		6 Hours	
8	Strings and its Operations		6 Hours	
9	Regular Expressions		6 Hours	
10	List and its operations		6 Hours	
11	Dictionaries: operations		6 Hours	

12	Tuples and its operations	6 Hours
13	Set and its operations	6 Hours
14	Functions, Recursions	6 Hours
15	Sorting Techniques (Bubble/Selection/Insertion)	6 Hours
16	Searching Techniques : Sequential Search and Binary Search	6 Hours
17	Files and its Operations	6 Hours

CSE1002	<b>PROBLEM SOLVING AND OBJECT ORIENTED PROGRAMMING</b>	L	T	P	J	C
		0	0	6	0	3
<b>Pre-requisite</b>	<b>Nil</b>			<b>Syllabus version</b>		
				1.0		

**Course Objectives:**

1. To emphasize the benefits of object oriented concepts.
2. To enable students to solve the real time applications using object oriented programming features
3. To improve the skills of a logical thinking and to solve the problems using any processing elements

**Expected Course Outcome:**

1. Demonstrate the basics of procedural programming and to represent the real world entities as programming constructs.
2. Enumerate object oriented concepts and translate real-world applications into graphical representations.
3. Demonstrate the usage of classes and objects of the real world entities in applications.
4. Discriminate the reusability and multiple interfaces with same functionality based features to solve complex computing problems.
5. Illustrate possible error-handling constructs for unanticipated states/inputs and to use generic programming constructs to accommodate different datatypes.
6. Validate the program against file inputs towards solving the problem..

**Student Learning Outcomes (SLO):** **1,9,17**

**List of Challenging Experiments (Indicative)**

1.	<b>Postman Problem</b>  A postman needs to walk down every street in his area in order to deliver the mail. Assume that the distances between the streets along the roads are given. The postman starts at the post office and returns back to the post office after delivering all the mails. Implement an algorithm to help the post man to walk minimum distance for the purpose.	10 hours
2.	<b>Budget Allocation for Marketing Campaign</b>  A mobile manufacturing company has got several marketing options such as	15 hours

	Radio advertisement campaign, TV non peak hours campaign, City top paper network, Viral marketing campaign, Web advertising. From their previous experience, they have got a statistics about paybacks for each marketing option. Given the marketing budget (rupees in crores) for the current year and details of paybacks for each option, implement an algorithm to determine the amount that shall be spent on each marketing option so that the company attains the maximum profit.	
3.	<b>Missionaries and Cannibals</b>  Three missionaries and three cannibals are on one side of a river, along with a boat that can hold one or two people. Implement an algorithm to find a way to get everyone to the other side of the river, without ever leaving a group of missionaries in one place outnumbered by the cannibals in that place.	10 hours
4.	<b>Register Allocation Problem</b>  A register is a component of a computer processor that can hold any type of data and can be accessed faster. As registers are faster to access, it is desirable to use them to the maximum so that the code execution is faster. For each code submitted to the processor, a register interference graph (RIG) is constructed. In a RIG, a node represents a temporary variable and an edge is added between two nodes (variables) $t_1$ and $t_2$ if they are live simultaneously at some point in the program. During register allocation, two temporaries can be allocated to the same register if there is no edge connecting them. Given a RIG representing the dependencies between variables in a code, implement an algorithm to determine the number of registers required to store the variables and speed up the code execution	15 hours
5.	<b>Selective Job Scheduling Problem</b>  A server is a machine that waits for requests from other machines and responds to them. The purpose of a server is to share hardware and software resources among clients. All the clients submit the jobs to the server for execution and the server may get multiple requests at a time. In such a situation, the server schedules the jobs submitted to it based on some criteria and logic. Each job contains two values namely time and memory required for execution. Assume that there are two servers that schedule jobs based on time and memory. The servers are named as Time Schedule Server and memory Schedule Server respectively. Design a OOP model and implement the time Schedule Server and memory Schedule Server. The Time Schedule Server arranges jobs based on time required for execution in ascending order whereas memory Schedule Server arranges jobs based on memory required for execution in ascending order	15 hours
6.	<b>Fragment Assembly in DNA Sequencing</b>  DNA, or deoxyribonucleic acid, is the hereditary material in humans and	15 hours

	almost all other organisms. The information in DNA is stored as a code made up of four chemical bases: adenine (A), guanine (G), cytosine (C), and thymine (T). In DNA sequencing, each DNA is sheared into millions of small fragments (reads) which assemble to form a single genomic sequence (superstring). Each read is a small string. In such a fragment assembly, given a set of reads, the objective is to determine the shortest superstring that contains all the reads. For example, given a set of strings, 000, 001, 010, 011, 100, 101, 110, 111 the shortest superstring is 0001110100. Given a set of reads, implement an algorithm to find the shortest superstring that contains all the given reads.	
7.	<p><b>House Wiring</b></p> <p>An electrician is wiring a house which has many rooms. Each room has many power points in different locations. Given a set of power points and the distances between them, implement an algorithm to find the minimum cable required.</p>	10 hours

**Total Laboratory Hours** **90 hours**

Recommended by Board of Studies	04-04-2014		
Approved by Academic Council	No. 37	Date	16-06-2015

<b>Course Code</b>	<b>Course Title</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>					
<b>CSI3901</b>	<b>Technical Answers for Real World Problems (TARP)</b>	<b>1</b>	<b>0</b>	<b>0</b>	<b>4</b>	<b>2</b>					
<b>Pre-requisite</b>	<b>PHY1901 and 143 Credits Earned</b>	<b>Syllabus version</b>				<b>1.0</b>					
<b>Course Objectives</b>											
<ol style="list-style-type: none"> <li>1. To assist the students in identifying industrial and societal problems and help develop new technologies to solve them.</li> <li>2. To guide the students in building robust and efficient prototypes/products.</li> <li>3. To train the students to analyze the developed prototypes using the methodologies/criteria available.</li> </ol>											
<b>Course Outcomes</b>											
Upon successful completion of the course the students will be able to											
<ol style="list-style-type: none"> <li>1. Identify industrial and societal problems that can be solved using science engineering principles.</li> <li>2. Develop novel solutions to solve the identified problems.</li> </ol>											
<b>Module:1</b>		<b>2 hours</b>									
<ol style="list-style-type: none"> <li>1. Spotting real life problems and formulating engineering solutions.</li> <li>2. Students can be taken on industrial/field visits to gather relevant information.</li> <li>3. Teams can be formed in a group of maximum 5.</li> <li>4. Eight hours of dedicated team activity is required for completion of the project.</li> <li>5. A survey of state-of-the-art technologies/methodologies that can be used to solve the problem.</li> <li>6. The proposed prototype/solution must be in the form of fabrication/coding/modeling/product design/process design/relevant scientific methodologies.</li> <li>7. A consolidated report must be submitted for evaluation.</li> <li>8. Students' contribution, presentation, and progress over the course of the project will be considered for the continuous assessment of the theory component.</li> <li>9. The outcome will be evaluated in terms of technical, economic, social, environmental, political, and demographic feasibility.</li> <li>10. Each group member should have made significant contribution to the overall project.</li> </ol>											
Mode of Evaluation: (No FAT) Continuous Assessment of the project in three reviews with mark weightage of 20:30:50 - project report to be submitted.

<b>ENG1901</b>	<b>Technical English - I</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>						
		<b>0</b>	<b>0</b>	<b>4</b>	<b>0</b>	<b>2</b>						
<b>Pre-requisite</b>	<b>Syllabus Version</b>											
	<b>1.0</b>											
<b>Course Objectives:</b>												
<ol style="list-style-type: none"> <li>1. To enhance students' knowledge of grammar and vocabulary to read and write error-free language in real life situations.</li> <li>2. To make the students' practice the most common areas of written and spoken communications skills.</li> <li>3. To improve students' communicative competency through listening and speaking activities in the classroom.</li> </ol>												
<b>Expected Course Outcome:</b>												
<ol style="list-style-type: none"> <li>1. Develop a better understanding of advanced grammar rules and write grammatically correct sentences.</li> <li>2. Acquire wide vocabulary and learn strategies for error-free communication.</li> <li>3. Comprehend language and improve speaking skills in academic and social contexts.</li> <li>4. Improve listening skills so as to understand complex business communication in a variety of global English accents through proper pronunciation.</li> <li>5. Interpret texts, diagrams and improve both reading and writing skills which would help them in their academic as well as professional career.</li> </ol>												
<b>Student Learning Outcomes (SLO):</b>		<b>3,16, 18</b>										
<b>Module:1</b>	<b>Advanced Grammar</b>		<b>4 hours</b>									
Articles, Tenses, Voice and Prepositions												
Activity: Worksheets on Impersonal Passive Voice, Exercises from the prescribed text												
<b>Module:2</b>	<b>Vocabulary Building I</b>		<b>4 hours</b>									
Idioms and Phrases, Homonyms, Homophones and Homographs												
Activity: Jigsaw Puzzles; Vocabulary Activities through Web tools												
<b>Module:3</b>	<b>Listening for Specific Purposes</b>		<b>4 hours</b>									
Gist, monologues, short conversations, announcements, briefings and discussions												
Activity: Gap filling; Interpretations												
<b>Module:4</b>	<b>Speaking for Expression</b>		<b>6 hours</b>									
Introducing oneself and others, Making Requests & responses, Inviting and Accepting/Declining Invitations.												
Activity: Brief introductions; Role-Play; Skit.												
<b>Module:5</b>	<b>Reading for Information</b>		<b>4 hours</b>									
Reading Short Passages, News Articles, Technical Papers and Short Stories												
Activity: Reading specific news paper articles; blogs												
<b>Module:6</b>	<b>Writing Strategies</b>		<b>4 hours</b>									
Joining the sentences, word order, sequencing the ideas, introduction and conclusion												
Activity: Short Paragraphs; Describing familiar events; story writing												
<b>Module:7</b>	<b>Vocabulary Building II</b>		<b>4 hours</b>									
Enrich the domain specific vocabulary by describing Objects, Charts, Food, Sports and Employment. Activity: Describing Objects, Charts, Food, Sports and Employment												
<b>Module:8</b>	<b>Listening for Daily Life</b>		<b>4 hours</b>									
Listening for statistical information, Short extracts, Radio broadcasts and TV interviews												
Activity: Taking notes and Summarizing												
<b>Module:9</b>	<b>Expressing Ideas and Opinions</b>		<b>6 hours</b>									
Telephonic conversations, Interpretation of Visuals and describing products and processes.												
Activity: Role-Play (Telephonic); Describing Products and Processes												
<b>Module: 10</b>	<b>Comprehensive Reading</b>		<b>4 hours</b>									

Reading Comprehension, Making inferences, Reading Graphics, Note-making, and Critical Reading. Activity: Sentence Completion; Cloze Tests	
<b>Module: 11</b>   <b>Narration</b>	<b>4 hours</b>
Writing narrative short story, Personal milestones, official letters and E-mails. Activity: Writing an E-mail; Improving vocabulary and writing skills.	
<b>Module:12</b>   <b>Pronunciation</b>	<b>4 hours</b>
Speech Sounds, Word Stress, Intonation, Various accents Activity: Practicing Pronunciation through web tools; Listening to various accents of English	
<b>Module:13</b>   <b>Editing</b>	<b>4 hours</b>
Simple, Complex & Compound Sentences, Direct & Indirect Speech, Correction of Errors, Punctuations. Activity: Practicing Grammar	
<b>Module:14</b>   <b>Short Story Analysis</b>	<b>4 hours</b>
“The Boundary” by Jhumpa Lahiri Activity: Reading and analyzing the theme of the short story.	
<b>Total Lecture hours:</b>	<b>60 hours</b>

<b>Mode of evaluation:</b> Quizzes, Presentation, Discussion, Role play, Assignments and FAT	
<b>List of Challenging Experiments (Indicative)</b>	

1.	Self-Introduction	
2.	Sequencing Ideas and Writing a Paragraph	
3.	Reading and Analyzing Technical Articles	
4.	Listening for Specificity in Interviews (Content Specific)	
5.	Identifying Errors in a Sentence or Paragraph	
6.	Writing an E-mail by narrating life events	
<b>Mode of evaluation:</b> Quizzes, Presentation, Discussion, Role play, Assignments and FAT		
<b>Recommended by Board of Studies</b>	08.06.2019	
<b>Approved by Academic Council</b>	55	Date: 13.06.2019

<b>ENG1902</b>	<b>Technical English - II</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>						
		<b>0</b>	<b>0</b>	<b>4</b>	<b>0</b>	<b>2</b>						
<b>Pre-requisite</b>	<b>Syllabus Version</b>											
	<b>1.0</b>											
<b>Course Objectives:</b>												
<ol style="list-style-type: none"> <li>1. To acquire proficiency levels in LSRW skills on par with the requirements for placement interviews of high-end companies / competitive exams.</li> <li>2. To evaluate complex arguments and to articulate their own positions on a range of technical and general topics.</li> <li>3. To speak in grammatical and acceptable English with minimal MTI, as well as develop a vast and active vocabulary.</li> </ol>												
<b>Expected Course Outcome:</b>												
<ol style="list-style-type: none"> <li>1. Communicate proficiently in high-end interviews and exam situations and all social situations</li> <li>2. Comprehend academic articles and draw inferences</li> <li>3. Evaluate different perspectives on a topic</li> <li>4. Write clearly and convincingly in academic as well as general contexts</li> <li>5. Synthesize complex concepts and present them in speech and writing</li> </ol>												
<b>Student Learning Outcomes (SLO):</b> <b>3,16, 18</b>												
<b>Module:1</b>	<b>Listening for Clear Pronunciation</b>	<b>4 hours</b>										
Ice-breaking, Introduction to vowels, consonants, diphthongs. Listening to formal conversations in British and American accents (BBC and CNN) as well as other 'native' accents Activity: Factual and interpretive exercises; note-making in a variety of global English accents												
<b>Module:2</b>	<b>Introducing Oneself</b>	<b>4 hours</b>										
Speaking: Individual Presentations Activity: Self-Introductions, Extempore speech												
<b>Module:3</b>	<b>Effective Writing</b>	<b>6 hours</b>										
Writing: Business letters and Emails, Minutes and Memos Structure/ template of common business letters and emails: inquiry/ complaint/ placing an order; Formats of Minutes and Memos Activity: Students write a business letter and Minutes/ Memo												
<b>Module:4</b>	<b>Comprehensive Reading</b>	<b>4 hours</b>										
Reading: Reading Comprehension Passages, Sentence Completion (Technical and General Interest), Vocabulary and Word Analogy Activities: Cloze tests, Logical reasoning, Advanced grammar exercises												
<b>Module:5</b>	<b>Listening to Narratives</b>	<b>4 hours</b>										
Listening: Listening to audio files of short stories, News, TV Clips/ Documentaries, Motivational Speeches in UK/ US/ global English accents. Activity: Note-making and Interpretive exercises												
<b>Module:6</b>	<b>Academic Writing and Editing</b>	<b>6 hours</b>										
Writing: Editing/ Proofreading symbols Citation Formats Structure of an Abstract and Research Paper Activity: Writing Abstracts and research paper; Work with Editing/ Proofreading exercise												
<b>Module:7</b>	<b>Team Communication</b>	<b>4 hours</b>										
Speaking: Group Discussions and Debates on complex/ contemporary topics Discussion evaluation parameters, using logic in debates Activity: Group Discussions on general topics												

<b>Module:8</b>	<b>Career-oriented Writing</b>	<b>4 hours</b>
Writing: Resumes and Job Application Letters, SOP		
Activity: Writing resumes and SOPs		
<b>Module:9</b>	<b>Reading for Pleasure</b>	<b>4 hours</b>
Reading: Reading short stories		
Activity: Classroom discussion and note-making, critical appreciation of the short story		
<b>Module: 10</b>	<b>Creative Writing</b>	<b>4 hours</b>
Writing: Imaginative, narrative and descriptive prose		
Activity: Writing about personal experiences, unforgettable incidents, travelogues		
<b>Module: 11</b>	<b>Academic Listening</b>	<b>4 hours</b>
Listening: Listening in academic contexts		
Activity: Listening to lectures, Academic Discussions, Debates, Review Presentations, Research Talks, Project Review Meetings		
<b>Module:12</b>	<b>Reading Nature-based Narratives</b>	<b>4 hours</b>
Narratives on Climate Change, Nature and Environment		
Activity: Classroom discussions, student presentations		
<b>Module:13</b>	<b>Technical Proposals</b>	<b>4 hours</b>
Writing: Technical Proposals		
Activities: Writing a technical proposal		
<b>Module:14</b>	<b>Presentation Skills</b>	<b>4 hours</b>
Persuasive and Content-Specific Presentations		
Activity: Technical Presentations		
<b>Total Lecture hours:</b>		<b>60 hours</b>

		<b>0</b>	<b>0</b>	<b>2</b>	<b>4</b>	<b>2</b>						
<b>Pre-requisite</b>	<b>Syllabus Version</b>											
	<b>1.0</b>											
<b>Course Objectives:</b>												
<ol style="list-style-type: none"> <li>1. To review literature in any form or any technical article</li> <li>2. To infer content in social media and respond accordingly</li> <li>3. To communicate with people across the globe overcoming trans-cultural barriers and negotiate successfully</li> </ol>												
<b>Expected Course Outcome:</b>												
<ol style="list-style-type: none"> <li>1. Analyze critically and write good reviews</li> <li>2. Articulate research papers, project proposals and reports</li> <li>3. Communicate effectively in a trans-cultural environment</li> <li>4. Negotiate and lead teams towards success</li> <li>5. Present ideas in an effective manner using web tools</li> </ol>												
<b>Student Learning Outcomes (SLO):</b>		<b>3,16, 18</b>										
<b>Module:1</b>	<b>Negotiation and Decision Making Skills through Literary Analysis</b>					<b>5 hours</b>						
Concepts of Negotiation and Decision Making Skills												
<b>Activity:</b>												
Analysis of excerpts from Shakespeare's "The Merchant of Venice" (court scene) and discussion on negotiation skills.												
Critical evaluation of excerpts from Shakespeare's "Hamlet" (Monologue by Hamlet) and discussion on decision making skills												
<b>Module:2</b>	<b>Writing reviews and abstracts through movie interpretations</b>					<b>5 hours</b>						
Review writing and abstract writing with competency												
<b>Activity:</b>												
Watching Charles Dickens "Great Expectations" and writing a movie review												
Watching William F. Nolan's "Logan's Run" and analyzing it in tune with the present scenario of depletion of resources and writing an abstract												
<b>Module:3</b>	<b>Technical Writing</b>					<b>4 hours</b>						
Stimulate effective linguistics for writing: content and style												
<b>Activity:</b> Proofreading, Statement of Purpose												
<b>Module:4</b>	<b>Trans-Cultural Communication</b>					<b>4 hours</b>						
Nuances of Trans-cultural communication												
<b>Activity:</b>												
Group discussion and case studies on trans-cultural communication.												
Debate on trans-cultural communication.												
<b>Module:5</b>	<b>Report Writing and Content Writing</b>					<b>4 hours</b>						
Enhancing reportage on relevant audio-visuals												
<b>Activity:</b>												
Watch a documentary on social issues and draft a report												
Identify a video on any social issue and interpret												
<b>Module:6</b>	<b>Drafting project proposals and article writing</b>					<b>4 hours</b>						
Dynamics of drafting project proposals and research articles												
<b>Activity:</b>												
Writing a project proposal.												
Writing a research article.												
<b>Module:7</b>	<b>Technical Presentations</b>					<b>4 hours</b>						
Build smart presentation skills and strategies												

<b>Activity:</b> Technical presentations using PPT and Web tools	
<b>Total Lecture hours:</b>	<b>30 hours</b>

<b>HUM1021</b>	<b>ETHICS AND VALUES</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>2</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>2</b>
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>				
		1.2				

**Course Objectives:**

1. To understand and appreciate the ethical issues faced by an individual in profession, society and polity
2. To understand the negative health impacts of certain unhealthy behaviors
3. To appreciate the need and importance of physical, emotional health and social health

**Expected Course Outcome:**

Students will be able to:

1. Follow sound morals and ethical values scrupulously to prove as good citizens
2. Understand various social problems and learn to act ethically
3. Understand the concept of addiction and how it will affect the physical and mental health
4. Identify ethical concerns in research and intellectual contexts, including academic integrity, use and citation of sources, the objective presentation of data, and the treatment of human subjects
5. Identify the main typologies, characteristics, activities, actors and forms of cybercrime

**Student Learning Outcomes (SLO):** 2, 10, 11, 12

<b>Module: 1</b>	<b>Being good and responsible</b>	<b>5 hours</b>
------------------	-----------------------------------	----------------

Gandhian values such as truth and non-violence – comparative analysis on leaders of past and present – society's interests versus self-interests – Personal Social Responsibility: Helping the needy, charity and serving the society.

<b>Module: 2</b>	<b>Social Issues 1</b>	<b>4 hours</b>
------------------	------------------------	----------------

Harassment – types - Prevention of harassment, violence and terrorism

<b>Module: 3</b>	<b>Social Issues 2</b>	<b>4 hours</b>
------------------	------------------------	----------------

Corruption: ethical values, causes, impact, laws, prevention – electoral malpractices white collar crimes – tax evasions – unfair trade practices

<b>Module: 4</b>	<b>Addiction and Health</b>	<b>3 hours</b>
------------------	-----------------------------	----------------

Peer pressure - Alcoholism: ethical values, causes, impact, laws, prevention – Ill effects of smoking – Prevention of Suicides

Sexual Health: Prevention and impact of pre-marital pregnancy and Sexually Transmitted Diseases

<b>Module: 5</b>	<b>Drug Abuse</b>	<b>4 hours</b>
------------------	-------------------	----------------

Abuse of different types of legal and illegal drugs: ethical values, causes, impact, laws and prevention

<b>Module: 6</b>	<b>Personal and Professional Ethics</b>	<b>3 hours</b>
------------------	---	----------------

Dishonesty - Stealing - Malpractices in Examinations – Plagiarism

<b>Module: 7</b>	<b>Abuse of technologies</b>	<b>4 hours</b>
------------------	------------------------------	----------------

Hacking and other cyber crimes, addiction to mobile phone usage, video games and social networking websites

<b>Module: 8</b>	<b>Invited Talk: Contemporary Issues</b>	<b>3 hours</b>
------------------	--	----------------

<b>Total Lecture hours</b>	<b>30 hours</b>
----------------------------	-----------------

<b>MAT1011</b>	<b>Calculus for Engineers</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>2</b>	<b>0</b>	<b>4</b>
<b>Pre-requisite</b>	<b>Syllabus Version</b>					
	1.0					

**Course Objectives :**

1. To provide the requisite and relevant background necessary to understand the other important engineering mathematics courses offered for Engineers and Scientists.
2. To introduce important topics of applied mathematics, namely Single and Multivariable Calculus and Vector Calculus etc.
3. To impart the knowledge of Laplace transform, an important transform technique for Engineers which requires knowledge of integration

**Expected Course Outcomes:**

At the end of this course the students should be able to

1. apply single variable differentiation and integration to solve applied problems in engineering and find the maxima and minima of functions
2. understand basic concepts of Laplace Transforms and solve problems with periodic functions, step functions, impulse functions and convolution
3. evaluate partial derivatives, limits, total differentials, Jacobians, Taylor series and optimization problems involving several variables with or without constraints
4. evaluate multiple integrals in Cartesian, Polar, Cylindrical and Spherical coordinates.
5. understand gradient, directional derivatives, divergence, curl and Greens', Stokes, Gauss theorems
6. demonstrate MATLAB code for challenging problems in engineering

**Student Learning Outcome (SLO):** **1, 2, 9**

**Module:1 Application of Single Variable Calculus** **9 hours**

Differentiation- Extrema on an Interval-Rolle's Theorem and the Mean Value Theorem-Increasing and Decreasing functions and First derivative test-Second derivative test-Maxima and Minima-Concavity. Integration-Average function value - Area between curves - Volumes of solids of revolution - Beta and Gamma functions-interrelation

**Module:2 Laplace transforms** **7 hours**

Definition of Laplace transform-Properties-Laplace transform of periodic functions-Laplace transform of unit step function, Impulse function-Inverse Laplace transform-Convolution.

**Module:3 Multivariable Calculus** **4 hours**

Functions of two variables-limits and continuity-partial derivatives -total differential-Jacobian and its properties.

<b>Module:4</b>	<b>Application of Multivariable Calculus</b>	<b>5 hours</b>
Taylor's expansion for two variables–maxima and minima–constrained maxima and minima-Lagrange's multiplier method.		
<b>Module:5</b>	<b>Multiple integrals</b>	<b>8 hours</b>
Evaluation of double integrals–change of order of integration–change of variables between Cartesian and polar co-ordinates - Evaluation of triple integrals–change of variables between Cartesian and cylindrical and spherical co-ordinates- evaluation of multiple integrals using gamma and beta functions.		
<b>Module:6</b>	<b>Vector Differentiation</b>	<b>5 hours</b>
Scalar and vector valued functions – gradient, tangent plane–directional derivative–divergence and curl–scalar and vector potentials–Statement of vector identities-Simple problems		
<b>Module:7</b>	<b>Vector Integration</b>	<b>5 hours</b>
line, surface and volume integrals - Statement of Green's, Stoke's and Gauss divergence theorems -verification and evaluation of vector integrals using them.		
<b>Module:8</b>	<b>Contemporary Issues:</b> Industry Expert Lecture	<b>2 hours</b>
	<b>Total Lecture hours:</b>	<b>45 hours</b>
<b>Text Book(s)</b> [1] Thomas' Calculus, George B.Thomas, D.Weir and J. Hass, 13 <sup>th</sup> edition, Pearson, 2014. [2] Advanced Engineering Mathematics, Erwin Kreyszig, 10 <sup>th</sup> Edition, Wiley India, 2015.

<b>Mode of Evaluation</b>		
Digital Assignments, Quiz, Continuous Assessments, Final Assessment Test		
<b>List of Challenging Experiments (Indicative)</b>		
1.	Introduction to MATLAB through matrices, and general Syntax	3 hours
2	Plotting and visualizing curves and surfaces in MATLAB –	3 hours

	Symbolic computations using MATLAB	
3.	Evaluating Extremum of a single variable function	3 hours
4.	Understanding integration as Area under the curve	3 hours
5.	Evaluation of Volume by Integrals (Solids of Revolution )	3 hours
6.	Evaluating maxima and minima of functions of several variables	3 hours
7.	Applying Lagrange multiplier optimization method	2 hours
8.	Evaluating Volume under surfaces	2 hours
9.	Evaluating triple integrals	2 hours
10.	Evaluating gradient, curl and divergence	2 hours
11.	Evaluating line integrals in vectors	2 hours
12.	Applying Green's theorem to real world problems	2 hours
Total Laboratory Hours		<b>30 hours</b>

**Mode of Assessment:**

Weekly assessment, Final Assessment Test

Recommended by Board of Studies	12-06-2015
Approved by Academic Council	No. 37 Date 16-06-2015

<b>MAT2001</b>	<b>Statistics for Engineers</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		<b>3</b>	<b>0</b>	<b>2</b>	<b>0</b>	<b>4</b>

<b>Prerequisites</b>	<b>MAT1011 - Calculus for Engineers</b>	<b>Syllabus Version:</b>
		1.1

**Course Objectives :**

1. To provide students with a framework that will help them choose the appropriate descriptive methods in various data analysis situations.
2. To analyse distributions and relationship of real-time data.
3. To apply estimation and testing methods to make inference and modelling techniques for decision making.

**Expected Course Outcome:**

At the end of the course the student should be able to:

1. Compute and interpret descriptive statistics using numerical and graphical techniques.
2. Understand the basic concepts of random variables and find an appropriate distribution for analysing data specific to an experiment.
3. Apply statistical methods like correlation, regression analysis in analysing, interpreting experimental data.
4. Make appropriate decisions using statistical inference that is the central to experimental research.
5. Use statistical methodology and tools in reliability engineering problems.
6. demonstrate R programming for statistical data

**Student Learning Outcome (SLO):** **1, 2, 7, 9, 14**

<b>Module: 1</b>	<b>Introduction to Statistics</b>	<b>6 hours</b>
------------------	-----------------------------------	----------------

Introduction to statistics and data analysis-Measures of central tendency -Measures of variability-[Moments-Skewness-Kurtosis (Concepts only)].

<b>Module: 2</b>	<b>Random variables</b>	<b>8 hours</b>
------------------	-------------------------	----------------

Introduction -random variables-Probability mass Function, distribution and density functions - joint Probability distribution and joint density functions- Marginal, conditional distribution and density functions- Mathematical expectation, and its properties Covariance , moment generating function – characteristic function.

<b>Module: 3</b>	<b>Correlation and regression</b>	<b>4 hours</b>
------------------	-----------------------------------	----------------

Correlation and Regression – Rank Correlation- Partial and Multiple correlation- Multiple regression.

<b>Module: 4</b>	<b>Probability Distributions</b>	<b>7 hours</b>
------------------	----------------------------------	----------------

Binomial and Poisson distributions – Normal distribution – Gamma distribution –

Exponential distribution – Weibull distribution.		
<b>Module: 5</b>	<b>Hypothesis Testing I</b>	<b>4 hours</b>
Testing of hypothesis – Introduction-Types of errors, critical region, procedure of testing hypothesis-Large sample tests- Z test for Single Proportion, Difference of Proportion, mean and difference of means.		
<b>Module: 6</b>	<b>Hypothesis Testing II</b>	<b>9 hours</b>
Small sample tests- Student's t-test, F-test- chi-square test- goodness of fit - independence of attributes- Design of Experiments - Analysis of variance – one and two way classifications - CRD-RBD- LSD.		
<b>Module: 7</b>	<b>Reliability</b>	<b>5 hours</b>
Basic concepts- Hazard function-Reliabilities of series and parallel systems- System Reliability - Maintainability-Preventive and repair maintenance- Availability.		
<b>Module: 8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>
Industry Expert Lecture		
	<b>Total Lecture hours</b>	<b>45 hours</b>

<b>List of Experiments (Indicative)</b>		
•	Introduction: Understanding Data types; importing/exporting data.	3 hours
•	Computing Summary Statistics /plotting and visualizing	3 hours

	data using Tabulation and Graphical Representations.	
•	Applying correlation and simple linear regression model to real dataset; computing and interpreting the coefficient of determination.	3 hours
•	Applying multiple linear regression model to real dataset; computing and interpreting the multiple coefficient of determination.	3 hours
•	Fitting the following probability distributions: Binomial distribution	3 hours
•	Normal distribution, Poisson distribution	3 hours
•	Testing of hypothesis for One sample mean and proportion from real-time problems.	3 hours
	Testing of hypothesis for Two sample means and proportion from real-time problems	3 hours
•	Applying the t test for independent and dependent samples	2 hours
•	Applying Chi-square test for goodness of fit test and Contingency test to real dataset	2 hours
•	Performing ANOVA for real dataset for Completely randomized design, Randomized Block design ,Latin square Design	2 hours

		<b>1</b>	<b>0</b>	<b>0</b>	<b>4</b>	<b>2</b>						
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>										
		1.0										
<b>Course Objectives:</b>												
To develop the ability to <ul style="list-style-type: none"> <li>1. Learn methods of company formation and management.</li> <li>2. Gain practical skills in and experience of starting of business using pre-set collection of business ideas.</li> <li>3. Learn basics of entrepreneurial skills.</li> </ul>												
<b>Expected Course Outcome:</b>												
On completion of this course the students will be able to: <ul style="list-style-type: none"> <li>1. Understand developing business models and growth drivers</li> <li>2. Use the business model canvas to map out key components of enterprise</li> <li>3. Analyze market size, cost structure, revenue streams, and value chain</li> <li>4. Understand build-measure-learn principles</li> <li>5. Foreseeing and quantifying business and financial risks</li> </ul>												
<b>Student Learning Outcomes (SLO):</b>	2, 4, 18, 19											
<b>Module: 1</b>	<b>2hours</b>											
Creativity and Design Thinking (identify the vertical for business opportunity, understand your customers, accurately assess market opportunity)												
<b>Module: 2</b>	<b>3 hours</b>											
Minimum Viable Product (Value Proposition, Customer Segments, Build-measure-learn process)												
<b>Module: 3</b>	<b>3hours</b>											
Business Model Development (Channels and Partners, Revenue Model and streams, Key Resources, Activities and Costs, Customer Relationships and Customer Development Processes, Business model canvas—the lean model-templates)												
<b>Module: 4</b>	<b>3 hours</b>											
Business Plan and Access to Funding (visioning your venture, taking the product / service to market, Market plan including Digital & Viral Marketing, start-up finance – Costs / Profits & Losses / cash flow, Angel / VC / Bank Loans and Key elements of raising money)												
<b>Module: 5</b>	<b>2hours</b>											
Legal, Regulatory, CSR, Standards,Taxes												
<b>Module: 6</b>	<b>2 hours</b>											
Lectures by Entrepreneurs												
<b>Total Lecture hours</b>						<b>15 hours</b>						
<b>Text Book (s)</b>

		3	0	2	0	4					
<b>Pre-requisite</b>	<b>Physics of 12th standard or equivalent</b>	<b>Syllabus version</b>			1.0						
<b>Course Objectives:</b>											
To enable the students to understand the basics of the latest advancements in Physics viz., Quantum Mechanics, Nanotechnology, Lasers, Electro Magnetic Theory and Fiber Optics.											
<b>Expected Course Outcome: : Students will be able to</b>											
<ol style="list-style-type: none"> <li>1. Comprehend the dual nature of radiation and matter.</li> <li>2. Compute Schrodinger's equations to solve finite and infinite potential problems.</li> <li>3. Analyze quantum ideas at the nanoscale.</li> <li>4. Apply quantum ideas for understanding the operation and working principle of optoelectronic devices.</li> <li>5. Recall the Maxwell's equations in differential and integral form.</li> <li>6. Design the various types of optical fibers for different Engineering applications.</li> <li>7. Apply the various types of optoelectronic devices for designing a typical optical fiber communication system.</li> <li>8. Demonstrate the quantum mechanical ideas</li> </ol>											
<b>Student Learning Outcomes (SLO): 2, 4, 5, 9</b>											
<b>Module:1</b>	<b>Introduction to Modern Physics</b>	<b>6 hours</b>									
Planck's concept (hypothesis), Compton Effect, Particle properties of wave: Matter Waves, Davisson Germer Experiment, Heisenberg Uncertainty Principle, Wave function, and Schrodinger equation (time dependent & independent).											
<b>Module:2</b>	<b>Applications of Quantum Physics</b>	<b>6 hours</b>									
Particle in a 1-D box (Eigen Value and Eigen Function), 3-D Analysis (Qualitative), Tunneling Effect (Qualitative), Scanning Tunneling Microscope (STM).											
<b>Module:3</b>	<b>Nanophysics</b>	<b>6 hours</b>									
Introduction to Nano-materials, Moore's law, Properties of Nano-materials, Types of Nano-materials, Synthesis of Nano-materials (Top-down and Bottom-up approaches), Quantum confinement, Quantum well, wire & dot, Fullerenes, Carbon Nano-tubes (CNT), Applications of nanotechnology in industry.											
<b>Module:4</b>	<b>Laser Principles and Engineering Application</b>	<b>7 hours</b>									
Laser Characteristics, Spatial and Temporal Coherence, Einstein Coefficient & its significance, Population inversion, Two, three & four level systems, Pumping schemes, Threshold gain coefficient, Components of laser, Nd-YAG, He-Ne, CO <sub>2</sub> and their engineering applications.											
<b>Module:5</b>	<b>Electromagnetic Theory and its application</b>	<b>6 hours</b>									
Physics of Divergence, Gradient and Curl, Qualitative understanding of surface and volume integral, Maxwell Equations (Qualitative), Wave Equation (Derivation), EM Waves, Phase velocity, Group velocity, Group index (Qualitative), experimental evidence of light as em wave (Hertz experiment)											
<b>Module:6</b>	<b>Propagation of EM waves in Optical fibers</b>	<b>6 hours</b>									
Light propagation through fibers, Acceptance angle, Numerical Aperture, Types of fibers - step index, graded index, single mode & multimode, Attenuation, Dispersion-intermodal and intramodal.											
<b>Module:7</b>	<b>Optoelectronic Devices &amp; Applications of Optical fibers</b>	<b>6 hours</b>									

Introduction to semiconductors, Direct and indirect bandgap, Sources-LED & Laser Diode, Detectors-Photodetectors- PN & PIN - Applications of fiber optics in communication-Endoscopy.		
<b>Module:8</b>	<b>Contemporary issues</b>	<b>2 hours</b>
Lecture by Industry Experts		
	<b>Total Lecture hours:</b>	<b>45 hours</b>

<b>Course Objectives:</b>											
This course is offered to the students in the 1 <sup>st</sup> Year of B. Tech. in order to orient them towards independent, systemic thinking and be innovative.											
<ol style="list-style-type: none"> <li>1. To make students confident enough to handle the day to day issues.</li> <li>2. To develop the “Thinking Skill” of the students, especially Creative Thinking Skills</li> <li>3. To train the students to be innovative in all their activities</li> <li>4. To prepare a project report on a socially relevant theme as a solution to the existing issues</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. To understand the various types of thinking skills.</li> <li>2. To enhance the innovative and creative ideas.</li> <li>3. To find out a suitable solution for socially relevant issues-J component</li> </ol>											
<b>Module:1A</b>	<b>Self Confidence</b>	<b>1hour</b>									
Understanding self– JohariWindow–SWOTAnalysis– Self Esteem– Being a contributor – Case Study											
<b>Project :</b> Exploring self, understanding surrounding, thinking about how s/he can be a contributor											
For the society, Creating a big picture of being an innovator–writing a 1000 words imaginary Autobiography of self–Topic “Mr. X—the great innovator of 2015” and upload.											
<b>(non-contact hours)</b>											
<b>Module:1B</b>	<b>Thinking Skill</b>	<b>1 hour</b>									
Thinking and Behaviour–Types of thinking–Concrete– Abstract, Convergent, Divergent, Creative, Analytical, Sequential and Holistic thinking–Chunking Triangle–Context Grid – Examples – Case Study.											
<b>Project:</b> Meeting atleast 50 people belonging to various strata of life and talk to them / make field visits to identify a min. of 100 society related issues, problems for which they need solutions and categorise them and upload alongwith details of people met and lessons learnt. <b>(4 non-contact hours)</b>											
<b>Module:1C</b>	<b>Lateral Thinking Skill</b>	<b>1 hour</b>									
Blooms Taxonomy–HOTS–Out of the box thinking–deBono lateral thinking model–Examples											
<b>Project :</b> Last weeks incomplete portion to be done and uploaded											
<b>Module:2A</b>	<b>Creativity</b>	<b>1 hour</b>									
Creativity Models–Walla–Barrons–Koberg & Begnall–Examples											
<b>Project:</b> Selecting 5 out of 100 issues identified for future work. Criteria based approach for prioritisation, use of statistical tools & upload. <b>(4 non-contact hours)</b>											
<b>Module:2B</b>	<b>Brainstorming</b>	<b>1 hour</b>									
25 brainstorming techniques and examples											
<b>Project:</b> Brain storm and come out with as many solutions as possible for the top 5 issues identified & upload. <b>(4 non-contact hours)</b>											
<b>Module:3</b>	<b>Mind Mapping</b>	<b>1 hour</b>									
Mind Mapping techniques and guidelines. Drawing a mind map											
<b>Project:</b> Using Mind Maps get another set of solutions for the next 5 issues (issue 6–10). <b>(4 non-contact hours)</b>											
<b>Module:4A</b>	<b>Systems thinking</b>	<b>1 hour</b>									
Systems Thinking essentials–examples–Counter Intuitive conclusions											
<b>Project:</b> Select 1 issue / problem for which the possible solutions are available with you. Apply Systems Thinking process and pickup one solution [explanation should be given why the other											

possible solutions have been left out]. Go back to the customer and assess the acceptability and upload. (4 non-contact hours)			
<b>Module:4B</b>	<b>DesignThinking</b>		
Designthinkingprocess—Human element of design thinking— casestudy			
<b>Project:</b> Apply design thinking to the selected solution; apply the engineering & scientific tinge to it. Participate in “design week” celebrations upload the weeks learning outcome.			
<b>Module:5A</b>	<b>Innovation</b>		
Difference between Creativity and Innovation—Examples of innovation—Being innovative.			
<b>Project:</b> A literature searches on proto typing of your solution finalized. Prepare a proto type model or process and upload.(4 non-contact hours)			
<b>Module:5B</b>	<b>Blocks for Innovation</b>		
Identify Blocks for creativity and innovation – overcoming obstacles – Case Study			
<b>Project:</b> Project presentation on problem identification, solution, innovations—expected results—Interim review with PPT presentation. (4 non-contact hours)			
<b>Module:5C</b>	<b>Innovation Process</b>		
Steps for Innovation—right climate for innovation			
<b>Project:</b> Refining the project, based on the review report and uploading the text. (4 non-contact hours)			
<b>Module:6A</b>	<b>Innovation in India</b>		
Stories of 10 Indian innovations			
<b>Project:</b> Making the project better with add ons.(4 non- contact hours)			
<b>Module:6B</b>	<b>JUGAAD Innovation</b>		
Frugal and flexible approach to innovation—doing more with less Indian Examples			
<b>Project:</b> Finetuning the innovation project with JUGAAD principles and uploading (Credit for JUGAAD implementation).(4 non-contact hours)			
<b>Module:7A</b>	<b>Innovation Project Proposal Presentation</b>		
Project proposal contents, economic input, ROI—Template			
<b>Project:</b> Presentation of the innovative project proposal and upload.(4 non- contact hours)			
<b>Module:8A</b>	<b>Contemporary issue in Innovation</b>		
Contemporary issue in Innovation			
<b>Project:</b> Final project Presentation, Viva voce Exam (4 non-contact hours)			
<b>Total Lecture hours</b>	<b>15 hours</b>		
<b>Text Book(s)</b>

<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>					
		1.0					

**Course Objectives:**

1. In depth understanding of storage classes, memory allocation and pointer manipulation.
2. High level and low level organization of files.
3. Explore the power of macros and preprocessor directives.

**Expected Course Outcome:**

At the end of this course students will be able to:

- Learn various control structures and derived data types for solving real world problems using user defined functions.
- Explore dynamic memory allocations strategies and user defined data types.
- Realize the features of various Input and Output methods including files.
- Idealize the power of preprocessor directives and recognize programming methods
- Able to modularize the programming using various input, output, mathematical and utility functions in C and unix system interfaces.
- Able to design the software in c using features of graphics, embedded programming concepts.
- Apply the learned concepts and design algorithmic solutions for the real world problems.

<b>Module:1</b>	<b>Control Structures, Functions and Pointer</b>	<b>3 hours</b>
Review of C fundamentals : Data types, Operators and Expressions, Control structures, Arrays, Functions, String, Pointers and Structures.		

<b>Module:2</b>	<b>Memory Allocation</b>	<b>5 hours</b>
The memory layout in c programming, dynamic memory allocation: malloc(), calloc(), realloc(), free(), core dump, memory leak, dangling pointer. Pointers and array: Pointer and one dimensional arrays, Array of pointers, Pointers and two dimensional arrays, Subscripting pointer to an array, Dynamic 1D and 2D array.		

<b>Module:3</b>	<b>User defined data types</b>	<b>5 hours</b>
Structures, array of structures, passing structure to functions, function pointers : Passing and returning values using pointers, Array as function argument, Using Pointers as Arguments, Functions returning address, Function returning pointers, Pointer to a function, Calling a function through function pointer, Functions with varying number of arguments. arrays and structures within structures, Unions, Bit fields, enumerations, typedef.		

<b>Module:4</b>	<b>Input/Output Manipulation and Files</b>	<b>5 hours</b>
I/O Manipulation: Standard I/O, Formatted Output - printf, Formated Input - scanf, Variable length argument list, file access including FILE structure, fopen, stdin, sdtout and stderr, Error Handling including exit, perror and error.h, Line I/O, related miscellaneous functions. Files manipulations: File Descriptors, File pointer, Working with text files, working with binary files, Character I/O, EOF, Sequential and random access.		

<b>Module:5</b>	<b>Preprocessor Directives and programming method</b>	<b>4 hours</b>
Preprocessor Directives: #include statements, #define statements, #error, Conditional compilation, #undef, The # and ## preprocessor operators, Predefined macro names, Nested		

macros, Multiline macros, Macros pitfalls, Macros Vs enums, Inline functions, Macros vs inline functions, Inline recursive functions, Command line arguments, Environment Variables in C Programs, Type qualifiers. Programming Method: Debugging, User Defined Header, User Defined Library Function, makefile utility.
--

<b>Module:6</b>	<b>Standard Library functions and Unix system Interface</b>	<b>3 hours</b>
Standard Library functions: I/O functions, string and character functions, mathematical functions, time, date and localization functions, utility functions, wide-character functions. Unix system Interface: File Descriptor, Low level I/O - read and write, Open, create, close and unlink, Random access - Iseek, Discussions on Listing Directory, Storage allocator.		

<b>Module:7</b>	<b>Graphics, embedded C and Software development using C</b>	<b>3 hours</b>
Graphics: writing a text graphics program, writing a pixel graphics program, two dimensional graphics. Embedded C programming : Basics, Data types, keywords, programming structure, basic embedded c programming. Software development using c: Building a windows 2000 skeleton, software engineering using c, efficiency, porting programming.		

<b>Module:8</b>	<b>Contemporary issues</b>	<b>2 hours</b>	
		<b>Total Lecture hours:</b>	<b>30 hours</b>

<b>CSI3010</b>	<b>Data Warehousing and Data Mining</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>
		3	0	2	0	4
<b>Pre-requisite</b>	<b>Nil</b>				<b>Syllabus Revision</b>	
					1.0	

**Course Objectives:**

1. To introduce the concept of Data Warehousing and Data Mining
2. To develop the knowledge for application of the mining algorithms for association, clustering
3. To explain the algorithms for mining data streams and the features of recommendation systems.

**Course Outcomes:**

1. Interpret the contribution of data warehousing and data mining to the decision-support systems
2. Apply the link analysis and frequent item-set algorithms to identify the entities on the real world data
3. Apply the various classifications techniques to find the similarity between data items
4. Analyse the various data mining tasks and the principle algorithms for addressing the tasks
5. Evaluate and report the results of the recommended systems
6. Design the model to sample, filter and mine the Streaming data
7. Analyse the various data mining tasks for multimedia and complex data.

**Student Learning Outcomes:**      **2, 9, 12**

<b>Module 1</b>	<b>Data Warehouse</b>	4 Hours
-----------------	-----------------------	---------

Introduction: Data Warehouse and OLAP Technology for Data Mining; Data Warehouse, Multidimensional Data Model, Data Warehouse Architecture, Data Warehouse Implementation, Further Development of Data Cube Technology, From Data Warehousing to Data Mining Data Cube Computation and Data Generalization: Efficient Methods for Data Cube Computation, Further Development of Data Cube and OLAP Technology, Attribute-Oriented Induction.

<b>Module 2</b>	<b>Data Preprocessing</b>	4 Hours
-----------------	---------------------------	---------

Data, Types of Data, Attributes and Measurement, Types of Data Sets, Data Quality, Measurement and Data Collection Issues, Issues Related to Applications, Data pre-processing, Aggregation, Sampling, Dimensionality Reduction, Feature Subset Selection, Feature Creation, Discretization and Binarization, Variable Transformation, Similarity and Dissimilarity between Simple Attributes, Dissimilarities between Data Objects, Similarities between Data Objects.

<b>Module 3</b>	<b>Association Analysis: Concepts and Algorithms</b>	7 Hours
-----------------	--	---------

Frequent Itemset Generation, The Apriori Principle, Apriori Algorithm- Rule Generation-Candidate Generation and Pruning, Support Counting, Computational Complexity, Confidence-Based Pruning, Compact Representation of Frequent Itemsets, Maximal and Closed Frequent Itemsets, Alternative Methods for Generating Frequent Itemsets, FP-Growth Algorithm, FP-Tree Representation, Evaluation of Association Patterns, Handling Categorical Attributes, Handling Continuous Attributes, Discretization-Based Methods, Statistics-Based Methods, Non-discretization Methods, Sequential Pattern Discovery.

<b>Module 4</b>	<b>Classification and Prediction</b>	7 Hours
-----------------	--------------------------------------	---------

Classification - issues regarding classification and prediction -Decision Tree Induction-Bayesian classification – Support Vector Machines, Rule-Based Classification- Associative Classification Prediction, Rationale for Ensemble Method, Methods for Constructing an Ensemble Classifier, Bias-Variance Decomposition, Bagging, Boosting, Random Forests, Empirical Comparison among Ensemble Methods

<b>Module 5</b>	<b>Cluster Analysis and Outlier Analysis</b>	7 Hours
-----------------	--	---------

Types of Data in cluster analysis, - Major clustering methods- The k-Means Method, Agglomerative Hierarchical Clustering, Cluster Evaluation, Outlier Analysis- Distance-Based Outlier Detection- Density-Based Local Outlier Detection

<b>Module 6</b>	<b>Mining of Stream Data</b>	7 Hours
Mining Streams, Time Series and Sequence Data: Mining Data Streams, Mining Time-Series Data, Mining Sequence Patterns in Transactional Databases, Mining Sequence Patterns in Biological Data, Graph Mining, Social Network Analysis and Multirelational Data Mining		
<b>Module 7</b>	<b>Multimedia and Complex Data Mining</b>	7 Hours
Mining Object, Spatial, Multimedia, Text and Web Data: Multidimensional Analysis and Descriptive Mining of Complex Data Objects, Spatial Data Mining, Multimedia Data Mining, Text Mining, Mining the World Wide Web.		
<b>Module 8</b>	<b>Recent Trends</b>	<b>2 Hours</b>
		<b>Total Hours:</b> <b>45 Hours</b>
<b>TEXT BOOKS:</b>

<b>List of Experiments</b>		
1.	Build Data Warehouse and Explore WEKA	3 hours
2.	Introduction to exploratory data analysis using R	3 hours
3.	Demonstrate the Descriptive Statistics for a sample data like mean, median, variance and correlation etc.,	3 hours
4.	Demonstrate Missing value analysis and different plots using sample data.	3 hours
5.	Demonstration of apriori algorithm on various data sets with varying confidence (%) and support (%).	3 hours
6.	Demo on Classification Techniques using sample data Decision Tree, ID3 or CART.	3 hours
7.	Demonstration of Clustering Techniques K-Mean and Hierarchical.	3 hours
8.	Demo on Classification Technique using KNN.	3 hours
9.	Demonstration on Document Similarity Techniques and measurements.	3 hours
10.	Demo on Classification Technique for multimedia data	3 hours

<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>Understand and Acquire the skills of BI lifecycle &amp; its architecture to plan and implement the ETL processes.</li> <li>Acquire the skills to understand the Decision Support System (DSS) technologies and organizational issues related to Business Intelligence (BI) required to implement a BI strategy for an organization.</li> <li>Apply Business Performance Management and IT/strategic frameworks that are enabled by Business Intelligence tools and practices</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>Take initiatives to use BI for Organizational Decision making.</li> <li>Plan and execute a BI industrial Project.</li> <li>Perform Meta Data Repository Analysis.</li> <li>Articulate examples of how businesses are using Business Intelligence tools to enhance competitiveness and profitability.</li> <li>Adopt Business Intelligence tools and practices that align with business strategies based on a case analysis.</li> </ol>											
<b>Student Learning Outcomes (SLO):</b>		1,7, 14									
<b>Module:1</b>	<b>BI Fundamentals</b>	<b>4 hours</b>									
Business Intelligence and its impacts: Factors driving BI - BI and related techniques - obstacles to BI - BI in Contemporary organizations and BI capabilities.											
<b>Module:2</b>	<b>BI Life Cycle</b>	<b>6 hours</b>									
Introduction, Business Intelligence Lifecycle, Enterprise Performance Life Cycle (EPLC) Framework Elements, Life Cycle Phases, Human Factors in BI Implementation, BI Strategy, Objectives and Deliverables, Transformation Roadmap, Building a transformation roadmap, BI Development Stages and Steps, Parallel Development Tracks, BI Framework											
<b>Module:3</b>	<b>BI Technical Architecture</b>	<b>6 hours</b>									
Introducing the Technical Architecture: Technical Architecture overview, Back room Architecture, Presentation Server Architecture, Front room Architecture											
<b>Module:4</b>	<b>BI Modeling Process</b>	<b>7 hours</b>									
Modeling process overview - Getting organized - Four step modeling process - Design the dimensional model -Embrace data stewardship - Extract, Transform and Load overview - Extract, Transform and Load requirements and steps - Data extraction - Data transformation - Data loading.											
<b>Module:5</b>	<b>Analytics in BI</b>	<b>7 hours</b>									
Types of Analytics - Predictive analytics - classification – Regression Analysis - Decision tree – Case studies: social media analytics, Prescriptive analytics.											
<b>Module:6</b>	<b>Implementing BI</b>	<b>7 hours</b>									
Introduction, Business Intelligence Platform, Business Intelligence Platform Capability Matrix, BI Target Databases, Data Mart, BI Products and Vendor, The Big Four Business Intelligence vendors.											
<b>Module:7</b>	<b>Future of BI</b>	<b>6 hours</b>									
Future of business intelligence – Emerging Technologies, Predicting the Future, – Advanced Visualization – Rich Report, Future beyond Technology											
<b>Module:8</b>	<b>Contemporary issues</b>	<b>2 hours</b>

		2	0	2	0	3					
<b>Pre-Requisite</b>	<b>CSI2008</b>	<b>Syllabus version</b>				1.0					
<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To understand advanced database programming with Java</li> <li>2. To be able to effectively and efficiently work with servlets and JSP.</li> <li>3. To understand web development and network programming in Java.</li> </ol>											
<b>Course Outcome:</b>											
At the end of this course students should be able to:											
<ol style="list-style-type: none"> <li>1. Analyze the programs involving the advanced networking program constructs.</li> <li>2. Choose the appropriate database technique for solving the real world problem.</li> <li>3. Demonstrate hibernate and use them in appropriate applications.</li> <li>4. Propose the use of JSF for different scenarios.</li> <li>5. Explore various methods for web application development.</li> <li>6. Choose appropriate elements to facilitate network event</li> </ol>											
<b>Student Learning Outcomes (SLO):</b>	<b>2, 6, 17</b>										
<b>Module:1</b>	<b>JDBC Programming</b>	<b>4 hours</b>									
JDBC Architecture, Creating simple JDBC Application, Statements, ResultSet Operations, Batch Updates in JDBC, Creating CRUD Application, Using Rowsets Objects, Managing Database Transaction.											
<b>Module:2</b>	<b>Servlet API and JSP – Overview</b>	<b>4 hours</b>									
Servlet Introduction, Working with Servlet Context and Servlet Config Objects, Response and Redirection, Filter API, Hidden Form Fields and URL Rewriting, Servlet Events – Context Level and Session Level. JSP Architecture, JSP Scripting Elements, JSP Directives, JSP Action, JSP Implicit Objects, JSP Standard Tag Libraries, JSP Custom Tag											
<b>Module:3</b>	<b>J2EE and Web Development</b>	<b>4 hours</b>									
Java Platform, J2EE Architecture Types, Java EE Containers, Servers in J2EE Application, Web Application Structure, Web Containers and Web Architecture Models. Request Processing in Web Application.											
<b>Module:4</b>	<b>Advance Networking</b>	<b>4 hours</b>									
Introduction of Socket, Types of Socket, Socket API, TCP/IP client sockets, URL, TCP/IP server sockets, Datagrams, java.net package Socket, ServerSocket, InetAddress, URLConnection, RMI Architecture, Client Server Application using RMI											
<b>Module:5</b>	<b>Hibernate</b>	<b>4 hours</b>									
Introduction to Hibernate, Exploring Architecture of Hibernate, O/R Mapping with Hibernate, Hibernate Annotation, Hibernate Query Language, CRUD Operation using Hibernate API.											
<b>Module:6</b>	<b>Java Web Frameworks: Spring MVC</b>	<b>4 hours</b>									
Spring Introduction, Spring Architecture, Spring MVC Module, Life Cycle of Bean Factory, Constructor Injection, Dependency Injection, Inner Beans, Aliases in Bean, Bean Scopes, Spring Annotations, Spring AOP Module, Spring DAO, Database Transaction Management, CRUD Operation using DAO and Spring API.											
<b>Module:7</b>	<b>Java Server Faces</b>	<b>4 hours</b>									
Features of JSF, JSP Architecture, JSF request processing Life cycle, JSF Elements, JSF Expression Language, JSF Standard Component, JSF Facelets Tag, JSF Convertor Tag, JSF Validation Tag, JSF Database Access, JSF PrimeFaces.											
<b>Module:8</b>	<b>Recent Trends</b>	<b>2 hours</b>

<b>List of Experiments</b>			
1.	Write an application which will retrieve IP address for given website.	2 hours	
2.	Write a JDBC application which will interact with Database and perform the following task. <ol style="list-style-type: none"> <li>1) Create Student Table with RollNo, Name, and Address field and insert few records.</li> <li>2) Using PreparedStatement Object display the content of Record.</li> <li>3) Using PreparedStatement Object Insert Two Record.</li> <li>4) Using PreparedStatement Object Update One Record.</li> <li>5) Using PreparedStatement Object Delete One Record.</li> <li>6) Using PreparedStatement Object display the content of Record.</li> </ol>	4 hours	
3.	Create Servlet file which contains following functions: 1. Connect 2. Create Database 3. Create Table 4. Insert Records into respective table 5. Update records of particular table of database 6. Delete Records from table. 7. Delete table and also database.	4 hours	
4.	Write down the program in which input the two numbers in an html file and then display the addition in JSP file.  Write down a program which demonstrates the core tag of JSTL.	4 hours	
5.	Use Hibernate Query Language to insert, update and delete records in database.	4 hours	
6.	Study and Implement MVC using Spring Framework	4 hours	
7.	Inject Service using Aspect Oriented Programming.	4 hours	
8.	Use JSF Standard Components and Facelets Tags.	4 hours

<b>Mode of evaluation: Project/Activity</b>				
<b>Project Component:</b> This course aims to equip students with the skills to perform and interpret web mining and Social network analysis. The prescribed hands-on projects will help the students to understand the fundamentals of web mining and social network analysis inference by examining some simple ontology models. Students will develop the skill of web mining and social network analysis with ontology framework through machine learning algorithms and techniques. More advanced models will then be explored by the students through these projects, including machine learning predictive models in an ontology framework. Social network analysis, especially web service methods will progressively be introduced as practical hands-on programming . Special emphasis will be given on how students choose evaluation metrics and how they evaluate those prescribed models influenced by ontology and social network analysis framework.

Also learn how to combine two or more models to improve prediction.</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>Understand the process of formulating objectives, data selection/collection, preparation and process to successfully design the model.</li> <li>Able to prepare and process data for the models.</li> <li>Gain the insights from the data through Exploratory Data Analysis for feature engineering.</li> <li>Compare the underlying predictive modeling techniques. Analyze on the performance of the model and the quality of the results.</li> <li>Explore Hybrid models to enhance the prediction performance.</li> <li>Compare time series models and apply predictive modeling approaches using a suitable python package.</li> </ol>											
<b>Module:1</b>	<b>Introduction</b>						<b>4 hours</b>				
Overview of Predictive Analytics – Business Intelligence - Statistics – Challenges – Data , Modelling Obstacles – Processing Steps: CRISP-DM.											
<b>Module:2</b>	<b>Problem Understanding and Data Preparation</b>						<b>6 hours</b>				
Understanding Business problem – Prediction Variable – Data Requirement – Access to Data – Solution Method – Key Metrics - Model Performance - Diamond prices – Case Study - Data Collection - Preparation - Numerical features - Encoding Categorical Features - Low Variance Features - Near Collinearity One-hot Encoding.											
<b>Module:3</b>	<b>Feature Engineering</b>						<b>6 hours</b>				
Dataset Understanding - Exploratory Data Analysis - Univariate – Bivariate – Multivariate – Encoding Categorical Predictors – Engineering Numeric Predictors – Feature Selection – Methodologies – Irrelevant Feature Effect – Overfitting – Greedy Search – Global Search.											
<b>Module:4</b>	<b>Predictive Modeling</b>						<b>7 hours</b>				
Decision Trees – Logistic Regression – Neural Networks – k-NN – Naïve Bayes – Linear Regression.											
<b>Module:5</b>	<b>Model Assessment and Ensembles</b>						<b>7 hours</b>				
Approaches - Batch Assessment – Rank-Ordered – Assessing Regression Models – Model Ensembles – Bagging – Boosting – Random Forests – Heterogeneous Ensembles.											
<b>Module:6</b>	<b>Time Series Prediction</b>						<b>7 hours</b>				
Statistical Models – Autoregressive Models – Moving Average Models – Autoregressive Integrated Moving Average Models – Statespace Models – Hidden Markov Models – Deep Learning Models – Recurrent Neural Networks.											
<b>Module:7</b>	<b>Python Stack and Case Studies</b>						<b>6 hours</b>				
Anaconda – Jupyter – NumPy - pandas - Matplotlib – Seaborn - Scikit-learn - TensorFlow – Keras – Dash – Case Studies – Diamond Prices – Credit Card Defaults.											
<b>Module:8</b>	<b>Contemporary Issues</b>						<b>2 hours</b>				
		<b>Total Lecture hours:</b>			<b>45 hours</b>

One of the most critical components in machine learning projects is the database management system. With the help of this system, a large number of data can be sorted and one can gain meaningful insights from them. In this course students are prepared to the design and implement intelligent database system which can recognize the query of a user instead of a word search.

<b>Project Component:</b> This course aims to equip students with the skills to perform Data Engineering. The prescribed hands-on projects will help the students to understand the advances of data extraction, transformation and loading using state of infrastructures. Techniques to read and write data in most common formats in Pandas, Apache Airflow and NiFi. Data Manipulation will be progressively practiced with PostgreSQL, NiFi, Apache Airflow and Elasticsearch. Special emphasis will be given on how students choose data streaming techniques and how they to employ Kafka clusters for the same.

<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus Version</b>			1.0								
<b>Course Objectives:</b>													
<ol style="list-style-type: none"> <li>1. To learn to analyze the data using advanced machine learning techniques.</li> <li>2. To learn the different boosting, structural prediction and graphical models.</li> <li>3. To learn the various techniques for mining data stream and using Pig and Hive concepts.</li> </ol>													
<b>Course Outcome:</b>													
<ol style="list-style-type: none"> <li>1. Understand the algorithms and functioning of advanced techniques and concepts such as deep learning, distance metric learning, and domain adaptation.</li> <li>2. Understand the advantages and limitations of the algorithms and their potential applications.</li> <li>3. Design experiments for evaluation and analyze the results to test the effectiveness of individual components of an algorithm.</li> <li>4. To explore the fundamental concepts of big data analytics.</li> <li>5. To introduce programming tools PIG &amp; HIVE in Hadoop echo system.</li> </ol>													
<b>Module:1</b>	<b>Kernel Machines</b>	<b>4 hours</b>											
Kernel properties, Kernels for structure data and text, Multiple kernel learning, Generative models.													
<b>Module:2</b>	<b>Variants of Support Vector Machine</b>	<b>4 hours</b>											
Hard and soft margin SVM, Online SVM, Distributed SVM ,PAC Theory.													
<b>Module:3</b>	<b>Boosting, Structured Prediction and Graphical Models</b>	<b>9 hours</b>											
Adaboost, Gradient boosting , Learning directed and undirected models, Sampling, MAP inference and prediction, variational inference, causality													
<b>Module:4</b>	<b>Dictionary Learning</b>	<b>10 hours</b>											
Fundamentals, Regularization, Supervised and unsupervised dictionary, learning, Transform learning.													
<b>Module:5</b>	<b>Introduction to big data</b>	<b>6 hours</b>											
Introduction to Big Data Platform – Challenges of Conventional Systems - Intelligent data analysis – Nature of Data - Analytic Processes and Tools - Analysis vs Reporting.													
<b>Module:6</b>	<b>Mining data streams</b>	<b>6 hours</b>											
Introduction To Streams Concepts – Stream Data Model and Architecture - Stream Computing - Sampling Data in a Stream – Filtering Streams – Counting Distinct Elements in a Stream – Estimating Moments – Counting Oneness in a Window – Decaying Window - Real time Analytics Platform(RTAP) Applications - Case Studies - Real Time Sentiment Analysis- Stock Market Predictions.													
<b>Module:7</b>	<b>Frameworks:</b>	<b>4 hours</b>											
Applications on Big Data Using Pig and Hive – Data processing operators in Pig – Hive services – Hive QL – Querying Data in Hive - fundamentals of HBase and ZooKeeper - IBM InfoSphere Big Insights and Streams													
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>

<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To understand basic principles of knowledge management systems in biomedicine.</li> <li>2. To develop understanding of various aspects of Health Information Technology standards.</li> <li>3. To study IT aspects of clinical process modeling and health information systems.</li> </ol>											
<b>Course Outcomes:</b>											
<ol style="list-style-type: none"> <li>1. Explicate the basics and importance of medical informatics in hospital management.</li> <li>2. Describe the different modalities functions exists in the hospital for effective management.</li> <li>3. Explicate the role of technology both hardware &amp; software in training the medical personalities.</li> <li>4. Discuss the role of tele communication, tele-surgery, and robotics in healthcare.</li> <li>5. Elucidate the decision making concepts used in healthcare and their applications.</li> </ol>											
<b>Module:1 MI Introduction</b>				<b>4 hours</b>							
Introduction history, definition of medical informatics, bio-informatics, online learning, introduction to health informatics, prospectus of medical informatics.											
<b>Module:2 Hospital Management and Information Science</b>				<b>7 hours</b>							
Hospital Management And Information Science (HMIS): need, Benefits, capabilities, development, functional areas. Modules forming HMIS, HMIS and Internet, Pre-requisites for HMIS-client server technology, PACS, why HMIS fails, health information system, disaster management plans, advantages of HMIS. Big Data in hospitals.											
<b>Module:3 Health Informatics</b>				<b>6 hours</b>							
Electronic Health Records(EHR),Need for EHR, Institute of medicine's vision for EHR, Key Components, Computerized Physician Order Entry(CPOE),Clinical Decision Support System(CDSS), Electronic Prescribing, Practice Management adaptation, EHR adaptation, EHR and meaningful use Challenges, EHR Reimbursement.											
<b>Module:4 Computer Assisted Medical Education</b>				<b>7 hours</b>							
Computer Assisted Medical Education (CAME), Educational software, Simulation, Virtual Reality, Tele-education, Tele-mentoring. Computer Assisted Patient Education (CAPE), patient counseling software. Computer assisted surgery (CAS), Limitations of conventional surgery, 3D navigation system, intra-operative imaging for 3D navigation system, merits and demerits of CAS.											
<b>Module:5 Telecommunication Based Systems</b>				<b>7 hours</b>							
Tele-Medicine, Need, Advantages, Technology- Materials and Methods, Internet Tele-Medicine, Applications. Tele-Surgery: Tele-surgery, Robotic surgery, Need for Tele-Surgery, Advantages, Applications.											
<b>Module:6 Networking and Tele-Radiology</b>				<b>7 hours</b>							
Networking and teleradiology, Fault-tolerance, scalability, and robustness, Security and confidentiality in medicine Clinical modeling and performance optimization, Bringing MI to hospitals.											
<b>Module:7 Pattern Recognition &amp; Expert Systems</b>				<b>5 hours</b>							
Pattern Recognition, Discriminant functions, Supervised Learning, Parametric estimation, Maximum likelihood estimation, Pattern classification by distance functions. Expert Systems, Patient flow analysis. Scheduling problems, Clinical decision support, Clinical software development. Medical start-ups.											
<b>Module:8 Contemporary Issues</b>				<b>2 hours</b>

		3	0	2	0	4					
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>									
		1.0									
<b>Course Objectives:</b>											
<ol style="list-style-type: none"> <li>1. To provide necessary knowledge on Statistical methods to draw inference from data.</li> <li>2. To analyze and solve the complex problems using suitable Modeling technique.</li> </ol>											
<b>Course Outcome:</b>											
<ol style="list-style-type: none"> <li>1. Ability to gain basic knowledge on statistical inference.</li> <li>2. Gain the insights of estimation and various approaches for estimation.</li> <li>3. Develop suitable model and fit the probability distribution.</li> <li>4. Understand the hypothesis tests, regression and analysis of variance in statistical model.</li> <li>5. Analyze the data and perform non parametric statistics.</li> <li>6. Provide the inference using Bayesian method.</li> </ol>											
<b>Module:1</b>	<b>Introduction</b>	<b>6 hours</b>									
Statistics – Graphical Method – Numerical Method – How Inferences are made – Theory and Reality – Probability and Inference - A Probabilistic Model for an Experiment: The Discrete Case - Numerical Events and Random Variables – Introduction to R - R Objects – variables – ggplot – R Packages.											
<b>Module:2</b>	<b>Estimation And Methods Of Estimation</b>	<b>6 hours</b>									
The Bias and Mean Square Error of Point Estimators – Unbiased Point estimators – Confidence Intervals – Selecting Sample Size - The Rao–Blackwell Theorem and Minimum-Variance Unbiased Estimation.											
<b>Module:3</b>	<b>Parameter Estimation</b>	<b>6 hours</b>									
Parameter Estimation - The Method of Maximum Likelihood - Large Sample Theory for Maximum Likelihood Estimates - Confidence Intervals from Maximum Likelihood Estimates - The Bayesian Approach to Parameter Estimation.											
<b>Module:4</b>	<b>Statistical Model</b>	<b>7 hours</b>									
Hypothesis Testing- Elements of a statistical test - Relationships Between Hypothesis-Testing Procedures and Confidence Intervals - Power of Tests and the Neyman–Pearson Lemma - Linear Statistical Models – Least Square Estimators - Inferences Concerning the Parameters and Linear Functions of the Model Parameters: Simple and Multiple Linear Regression – Prediction by Simple and Multiple Linear Regression – Testing : Sum of Squares of deviation.											
<b>Module:5</b>	<b>The Analysis Of Variance: Anova</b>	<b>7 hours</b>									
The Analysis of Variance Procedure, A Statistical Model for the One-Way Layout, A Statistical Model for the Randomized Block Design - Estimation in the Randomized Block Design - Analysis of Variance Using Linear Models.											
<b>Module:6</b>	<b>Non Parametric Statistics</b>	<b>6 hours</b>									
A General Two-Sample Shift Model – The Wilcoxon Signed-Rank Test for a Matched-Pairs Experiment – The Kruskal–Wallis Test for the One-Way Layout – The Friedman Test for Randomized Block Designs - Rank Correlation Coefficient.											
<b>Module:7</b>	<b>Bayesian Method For Inference</b>	<b>5 hours</b>									
Bayesian Priors, Posteriors, and Estimators - Bayesian Credible Intervals - Bayesian Tests of Hypotheses.											
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>									
		<b>Total Lecture hours:</b>									
<b>45 hours</b>

<b>MDI4005</b>	<b>Image and Video Analytics</b>	<b>L</b>	<b>T</b>	<b>P</b>	<b>J</b>	<b>C</b>					
		3	0	0	4	4					
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>			1.0						
<b>Course Objectives</b>											
<ol style="list-style-type: none"> <li>1. To impart knowledge on the basic principles of image and video processing.</li> <li>2. To familiarize with image compression and segmentation.</li> <li>3. To explore the applications of image and video analysis towards image interpretation.</li> </ol>											
<b>Course Outcome</b>											
<ol style="list-style-type: none"> <li>1. To learn the fundamentals principles of image processing.</li> <li>2. To learn the fundamentals principles of video processing.</li> <li>3. To learn the fundamentals of motion estimation techniques.</li> <li>4. To analysis the range of methods available for image and video compression.</li> <li>5. To discover the principles of segmentation techniques.</li> <li>6. To apply low and high level feature techniques to solve real world image and video application.</li> </ol>											
<b>Module:1</b>	<b>Fundamentals of Image Processing</b>	<b>6 hours</b>									
Basic steps of Image processing system – Pixel relationship– Elements of Visual perception - Image Acquisition systems - Image sampling and quantization - Image Enhancement- Spatial and Frequency domain filter.											
<b>Module:2</b>	<b>Fundamentals of Video Processing</b>	<b>6 hours</b>									
Color: CMYK, RGB Models, HSI Models, Relationship Between Different Models. Video formation and representation-Video capture and display, Lattice theory and sampling. Video modelling-direct and indirect methods.											
<b>Module:3</b>	<b>Motion Estimation</b>	<b>6 hours</b>									
Fundamentals of Motion Estimation and Background foreground extraction - Motion Estimation - Motion Estimation Algorithms - Exhaustive Search Block Matching Algorithm, Hierarchical Block Matching Algorithm.											
<b>Module:4</b>	<b>Image and Video Compression</b>	<b>6 hours</b>									
Image Compression: Variable Length Coding – Bit-Plane Coding – Lossless Predictive Coding – Lossy Predictive Coding. Video Compression: Object-based video coding, MPEG, H.264 and H.265 standards.											
<b>Module:5</b>	<b>Segmentation</b>	<b>6 hours</b>									
Segmentation Techniques- Points, Edge, Curve and Corner detector - Edge linking and Boundary Extraction, Region, Cluster and Threshold based approaches.											
<b>Module:6</b>	<b>Feature Extraction Techniques</b>	<b>7 hours</b>									
Histogram of Oriented Gradients (HOG), Speeded Up Robust Features (SURF), Scale-Invariant Feature Transform (SIFT), Local Binary Patterns (LBP), Haar wavelets, Color histograms and Color correlogram.											
<b>Module:7</b>	<b>Image and Video Applications</b>	<b>6 hours</b>									
Image and Video Restoration, Retrieval, Watermarking and Video surveillance, and Multimedia Streaming.											
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>									
		<b>Total Lecture hours:</b>			<b>45 hours</b>						
<b>Text Book(s)</b>

		3	0	0	4	4				
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus Version</b>								
		1.0								
<b>Course Objectives:</b>										
<ol style="list-style-type: none"> <li>1. To introduce the Bayesian concepts and methods with emphasis on data analysis.</li> <li>2. To come to an inference by assessing both prior distributions as well as posterior means.</li> <li>3. To determine the best possible model among available options.</li> </ol>										
<b>Course Outcome:</b>										
<ol style="list-style-type: none"> <li>1. Understand the basics of probability and relate it to the Bayesian inference.</li> <li>2. Apply the inference rules customized for single parameter models.</li> <li>3. Design a simulation environment for generation of inferences by utilizing various algorithms.</li> <li>4. Scaling up the inference mechanism for multi-parameter and hierarchical models.</li> <li>5. Implement multiple modeling algorithms and for predictive analysis and evaluate the outcome metrics.</li> <li>6. Demonstrate the effectiveness of the multiple models by comparative analysis in real world scenarios.</li> </ol>										
<b>Module:1</b>	<b>Introduction</b>	<b>3 hours</b>								
Introduction to Probability, Priors and Posterior Analysis, Statistical Models, The Bayes inference, Bayesian Belief networks.										
<b>Module:2</b>	<b>Single Parameter Models</b>	<b>5 hours</b>								
Bayes Rule, Posterior Distribution and Inferences, Conjugate model, Normal model, Binomial model.										
<b>Module:3</b>	<b>Simulation</b>	<b>8 hours</b>								
Markov Chain Monte Carlo simulation, Gibbs Sampler, Approximation based on posterior modes, The Metropolis-Hastings algorithm, Introduction to R and Jags.										
<b>Module:4</b>	<b>Multi-Parameter and Hierarchical Models</b>	<b>8 hours</b>								
Multivariate normal model, Multi-parameter models-Normal data with conjugate, semi-conjugate prior distributions. Non-informative data, Hierarchical models - Computation, Model checking and customization, Exchangeability.										
<b>Module:5</b>	<b>Regression Models</b>	<b>7 hours</b>								
Variable selection for Linear Models, Hierarchical linear models- batch exchangeabilities and Regression coefficients, Generalized linear models- Logistic Regression, Standard likelihoods.										
<b>Module:6</b>	<b>Non-Linear Models</b>	<b>6 hours</b>								
Mixture models- Interpretation and setting up, Multivariate models- multivariate regression surfaces, Non-normal models.										
<b>Module:7</b>	<b>Comparison of Population</b>	<b>6 hours</b>								
Sample Size Determination, Inference – Rates, Normal Populations and Proportions.										
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>

Mode of Evaluation: CAT / Assignment / Quiz / FAT / Project / Seminar	
<b>Project Component:</b> This course aims to equip students with the skills to perform and interpret Bayesian data analyses. The prescribed hands-on projects will help the students to understand the fundamentals of Bayesian inference by examining some simple Bayesian models. Students will develop the skill of interpreting the visual graph, and will be able to interpret those graphs concerning the Bayesian Data Analysis perspective. More advanced models will then be explored by the students through these projects, including linear regression and hierarchical models in a Bayesian framework. Bayesian computational methods, especially Markov Chain Monte Carlo methods will progressively be introduced as practical hands-on programming. Special emphasis will be given on how students choose evaluation metrics and how they evaluate those prescribed models influenced by Bayesian framework.

		3	0	0	0	3				
<b>Pre-requisite</b>	<b>Nil</b>	<b>Syllabus version</b>								
		1.0								
<b>Course Objectives:</b>										
<ol style="list-style-type: none"> <li>1. To introduce the fundamental principles of Neural Networks and apply it to real world problems.</li> <li>2. Analyze the different models in ANN and their applications.</li> <li>3. To understand complexity of Deep Learning algorithms and CNN techniques with their benefits.</li> <li>4. Be able to analyze and select appropriate neural network architectures for a variety of tasks.</li> </ol>										
<b>Course Outcome:</b>										
<ol style="list-style-type: none"> <li>1. Identify and describe Artificial Neural Network techniques in building intelligent machines.</li> <li>2. Model Neuron and Neural Network, and to analyze ANN learning, and its applications.</li> <li>3. Identify the deep learning algorithms which are more appropriate for various types of learning tasks in various domains.</li> <li>4. Develop different single layer/multiple layer Perception learning algorithms.</li> <li>5. Implement deep learning algorithms and solve real-world problems.</li> </ol>										
<b>Module:1</b>	<b>Introduction to Artificial Neural Networks</b>	<b>5 hours</b>								
Fundamentals Of Neural Networks – Model of Artificial Neuron – Neural Network Architectures – Learning Methods – Taxonomy of Neural Network Architectures – Applications.										
<b>Module:2</b>	<b>Feed Forward Neural Networks</b>	<b>7 hours</b>								
Perceptron Models: Discrete, Continuous and Multi-Category –Training Algorithms: Discrete and Continuous Perceptron Networks – Limitations of the Perceptron – Model. Credit Assignment Problem – Generalized Delta Rule, Derivation of Back propagation (BP) Training.										
<b>Module:3</b>	<b>Other ANN Architectures</b>	<b>7 hours</b>								
Associative Memory – Exponential BAM – Associative Memory For Real Coded Pattern Pairs – Applications Adaptive Resonance Theory – Introduction – ART 1 – ART2 – Applications – Neural Networks Based On Competition – Kohonen Self Organizing Maps.										
<b>Module:4</b>	<b>Deep Learning</b>	<b>7 hours</b>								
Deep Feed Forward network, regularizations, training deep models, dropouts, Training Deep Neural Networks using Back Propagation-Setup and initialization issues, vanishing and exploding Gradient problems, Gradient- Descent Strategies.										
<b>Module:5</b>	<b>Convolutional Neural Network</b>	<b>6 hours</b>								
Convolutional Neural Network, Basic structure of Convolutional Network, Case studies: Alex net, VGGNet, GoogLeNet, Applications of CNN– Object Detection, Content based image Retrieval.										
<b>Module:6</b>	<b>Deep Reinforcement Learning</b>	<b>6 hours</b>								
Introduction- Stateless Algorithms-Framework of Reinforcement Learning- Bootstrapping for Value Function Learning- Policy Gradient Methods- Monte Carlo Tree Search.										
<b>Module:7</b>	<b>Advanced topics in Deep Learning</b>	<b>5 hours</b>								
–Introduction- Attention Mechanisms-Neural Networks with External Memory - Generative Adversarial Networks (GANs) - Competitive Learning.										
<b>Module:8</b>	<b>Contemporary Issues</b>	<b>2 hours</b>

						1.0				
<b>Course Objectives:</b>										
<ol style="list-style-type: none"> <li>1. To establish basic knowledge of optimization and apply it to engineering problems.</li> <li>2. Design algorithms that include operators, representations, fitness functions and potential hybridizations for non-trivial problems.</li> <li>3. Design algorithms that utilize the collective intelligence of simple organisms to solve complex problems.</li> <li>4. Design algorithms that have multiple conflicting objectives.</li> </ol>										
<b>Course Outcome:</b>										
<ol style="list-style-type: none"> <li>1. Understand fundamental concepts of Convex and Non Convex Optimization problems.</li> <li>2. Understand the difference between one dimensional and multi-dimensional search techniques.</li> <li>3. Apply nature-inspired algorithms to optimization, design, decision and learning problems.</li> <li>4. Analyze the Behavior systems of nature inspired algorithm applied in real world problems.</li> <li>5. Understand multi objective optimization techniques and use it to solve engineering problems.</li> </ol>										
<b>Module:1</b>	<b>Nonlinear Programming</b>	<b>6 hours</b>								
The general optimization problem, Convex sets and convex functions, Lagrange multiplier, Kuhn-Tucker conditions, linear programming, convex and non-convex optimization problems, Introduction to nature inspired optimization techniques, heuristic search.										
<b>Module:2</b>	<b>One Dimensional Search</b>	<b>5 hours</b>								
Sequential search method, Fibonacci search method, Secant method, Golden section search method, Line Search methods.										
<b>Module:3</b>	<b>Multi-Dimensional Search</b>	<b>7 hours</b>								
Conditions for local minimizers, Method of steepest descent, Newton's Method, Levenberg-Marquardt method, Conjugate gradient method.										
<b>Module:4</b>	<b>Physics Based Optimization Techniques</b>	<b>6 hours</b>								
Simulated Annealing – Gravitational Search Algorithm – Galactic Swarm Optimization Algorithm- Big Bang Big Crunch.										
<b>Module:5</b>	<b>Evolutionary Optimization Techniques</b>	<b>6 hours</b>								
Genetic Algorithms- Real valued Genetic Algorithms – Fine tuning the parameters – Differential Evolution.										
<b>Module:6</b>	<b>Swarm Intelligence Techniques</b>	<b>6 hours</b>								
Particle Swarm Optimization and hybrid gradient based PSO, Ant colony Optimization, Artificial Bee Colony Algorithm, Grey wolf optimizer.										
<b>Module:7</b>	<b>Multi objective optimization techniques</b>	<b>7 hours</b>								
Multi-objective optimization, Non-dominated sorting Genetic algorithm II (NSGA-II), Multi objective differential evolution (MODE), Multi-objective particle swarm optimization (MOPSO).

<b>Course Objectives:</b>										
<ol style="list-style-type: none"> <li>1. To introduce data representation methods and basics of statistics with emphasis on data analysis.</li> <li>2. To learn about the significance of data regression models on exploratory data analytics.</li> <li>3. To choose the best possible model among available options to perform data analytics.</li> </ol>										
<b>Course Outcome:</b>										
<ol style="list-style-type: none"> <li>1. Understand the basics of data collection and representation and basic concepts of statistics.</li> <li>2. Apply the probability functions and various data distribution methods to visualize the input data.</li> <li>3. Perform hypothesis testing to locate and reduce errors.</li> <li>4. Analyze the give data using linear and multiple regression models.</li> <li>5. Analyze the input data under consideration with the application of variance.</li> </ol>										
<b>Module:1</b>	<b>Introduction to data and statistics</b>	<b>5 hours</b>								
Collecting data sensibly, observation and experimentation, Sampling, Designing surveys, graphical and numerical methods for describing data.										
<b>Module:2</b>	<b>Probability and Distribution</b>	<b>7 hours</b>								
Definition of probability, conditional probability, Properties and basic rules of probability, random variables and probability distribution , Probability Distributions for Discrete Random Variables, Probability Distributions for Continuous Random Variables, Mean and Standard Deviation of a Random Variable, Binomial and Geometric Distributions, Normal Distributions, Checking for Normality and Normalizing Transformations.										
<b>Module:3</b>	<b>Hypothesis Testing</b>	<b>6 hours</b>								
Hypotheses and Test Procedures, Errors in Hypotheses Testing, Large-Sample Hypothesis Tests for a Population Proportion, Hypotheses Tests for a Population Mean, Power and Probability of Type II Error, Interpreting and Communicating the Results of Statistical Analyses.										
<b>Module:4</b>	<b>Linear Regression and Correlation</b>	<b>7 hours</b>								
Introduction, Estimating Model Parameters, Inferences about Regression Parameters, Predicting New Y Values Using Regression, Examining Lack of Fit in Linear Regression, The Inverse Regression Problem (Calibration), Correlation.										
<b>Module:5</b>	<b>Multiple Regression and the General Linear Model</b>	<b>7 hours</b>								
The General Linear Model, Estimating Multiple Regression Coefficients Contents, Inferences in Multiple Regression, Testing a Subset of Regression Coefficients, Forecasting Using Multiple Regression, Comparing the Slopes of Several Regression Lines, Logistic Regression.										
<b>Module:6</b>	<b>Multiple Regression Analysis</b>	<b>6 hours</b>								
Multiple Regression Models, Fitting a Model and Assessing Its Utility, Inferences Based on an Estimated Model, Other Issues in Multiple Regression, Interpreting and Communicating the Results of Statistical Analyses.										
<b>Module:7</b>	<b>Analysis of Variance</b>	<b>5 hours</b>								
Single-Factor ANOVA and the F Test, Multiple Comparisons, The F Test for a Randomized Block Experiment, Two-Factor ANOVA, Interpreting and Communicating the Results of Statistical Analyses, Nonparametric (Distribution-Free) Statistical Methods.

<b>Course Objectives:</b>												
<ol style="list-style-type: none"> <li>1. To equip learners with English grammar and its application.</li> <li>2. To enable learners to comprehend simple text and train them to speak and write flawlessly.</li> <li>3. To familiarize learners with MTI and ways to overcome them.</li> </ol>												
<b>Expected Course Outcome:</b>												
<ol style="list-style-type: none"> <li>1. Develop the skills to communicate clearly through effective grammar, pronunciation and writing.</li> <li>2. Understand everyday conversations in English</li> <li>3. Communicate and respond to simple questions about oneself.</li> <li>4. Improve vocabulary and expressions.</li> <li>5. Prevent MTI (Mother Tongue Influence) during usual conversation.</li> </ol>												
<b>Student Learning Outcomes (SLO):</b>   <b>3,16, 18</b>												
<b>Module:1</b>	<b>Essentials of grammar</b>	<b>3 Hours</b>										
Understand basic grammar-Parts of Speech												
Activity: Grammar worksheets on parts of speech												
<b>Module:2</b>	<b>Vocabulary Building</b>	<b>3 Hours</b>										
Vocabulary development; One word substitution												
Activity: Elementary vocabulary exercises												
<b>Module:3</b>	<b>Applied grammar and usage</b>	<b>4 Hours</b>										
Types of sentences; Tenses												
Activity: Grammar worksheets on types of sentences; tenses												
<b>Module:4</b>	<b>Rectifying common errors in everyday conversation</b>	<b>4 Hours</b>										
Detect and rectify common mistakes in everyday conversation												
Activity: Common errors in prepositions, tenses, punctuation, spelling and other parts of speech; Colloquialism												
<b>Module :5</b>	<b>Jumbled sentences</b>	<b>2 Hours</b>										
Sentence structure; Jumbled words to form sentences; Jumbled sentences to form paragraph/ short story												
Activity: Unscramble a paragraph / short story												
<b>Module:6</b>	<b>Text-based Analysis</b>	<b>4 Hours</b>										
<i>Wings of Fire</i> -Autobiography of APJ Abdul Kalam (Excerpts)												
Activity: Enrich vocabulary by reading and analyzing the text												
<b>Module:7</b>	<b>Correspondence</b>	<b>3 Hours</b>										
Letter, Email, Application Writing												
Activity: Compose letters; Emails, Leave applications												
<b>Module:8</b>	<b>Listening for Understanding</b>	<b>4 Hours</b>										
Listening to simple conversations & gap fill exercises												
Activity: Simple conversations in Received Pronunciation using audio-visual materials.												
<b>Module:9</b>	<b>Speaking to Convey</b>	<b>6 Hours</b>										
Self-introduction; role-plays; Everyday conversations												
Activity: Identify and communicate characteristic attitudes, values, and talents; Working and interacting within groups												

<b>Module:10</b>	<b>Reading for developing pronunciation</b>	<b>6 Hours</b>
Loud reading with focus on pronunciation by watching relevant video materials		
Activity: Practice pronunciation by reading aloud simple texts; Detecting syllables; Visually connecting to the words shown in relevant videos		
<b>Module:11</b>	<b>Reading to Contemplate</b>	<b>4 Hours</b>
Reading short stories and passages		
Activity: Reading and analyzing the author's point of view; Identifying the central idea.		
<b>Module:12</b>	<b>Writing to Communicate</b>	<b>6 Hours</b>
Paragraph Writing; Essay Writing; Short Story Writing		
Activity: Writing paragraphs, essays and short- stories		
<b>Module:13</b>	<b>Interpreting Graphical Data</b>	<b>6 Hours</b>
Describing graphical illustrations; interpreting basic charts, tables, and formats		
Activity: Interpreting and presenting simple graphical representations/charts in the form of PPTs		
<b>Module:14</b>	<b>Overcoming Mother Tongue Influence (MTI) in Pronunciation</b>	<b>5 Hours</b>
Practicing common variants in pronunciation		
Activity: Identifying and overcoming mother tongue influence.

		<b>0</b>	<b>0</b>	<b>4</b>	<b>0</b>	<b>2</b>						
<b>Pre-requisite</b>	<b>Syllabus version</b>											
	<b>1.0</b>											
<b>Course Objectives:</b>												
1. To practice grammar and vocabulary effectively 2. To acquire proficiency levels in LSRW skills in diverse social situations. 3. To analyze information and converse effectively in technical communication.												
<b>Expected Course Outcome:</b>												
1. Accomplish a deliberate reading and writing process with proper grammar and vocabulary. 2. Comprehend sentence structures while Listening and Reading. 3. Communicate effectively and share ideas in formal and informal situations. 4. Understand specialized articles and technical instructions and write clear technical correspondence. 5. Critically think and analyze with verbal ability.												
<b>Student Learning Outcomes (SLO):</b> <b>3,16, 18</b>												
<b>Module:1</b>	<b>Grammatical Aspects</b>											
Sentence Pattern, Modal Verbs, Concord (SVA), Conditionals, Connectives Activity : Worksheets, Exercises												
<b>Module:2</b>	<b>Vocabulary Enrichment</b>											
Active & Passive Vocabulary, Prefix and Suffix, High Frequency Words Activity : Worksheets, Exercises												
<b>Module:3</b>	<b>Phonics in English</b>											
Speech Sounds – Vowels and Consonants – Minimal Pairs- Consonant Clusters- Past Tense Marker and Plural Marker Activity : Worksheets, Exercises												
<b>Module:4</b>	<b>Syntactic and Semantic Errors</b>											
Tenses /SVA/ Articles/ Prepositions/ Punctuation & Right Choice of Vocabulary Activity : Worksheets, Exercises												
<b>Module:5</b>	<b>Stylistic errors</b>											
Dangling Modifiers, Parallelism, Standard English, Ambiguity, Redundancy, Brevity Activity : Worksheets, Exercises												
<b>Module:6</b>	<b>Listening and Note making</b>											
Intensive and Extensive Listening - Scenes from plays of Shakespeare (Eg: Court scene in <i>The Merchant of Venice</i> , Disguise Scene in <i>The Twelfth Night</i> , Death of Desdemona in <i>Othello</i> , Death scene in <i>Julius Caesar</i> and Balcony scene from <i>Romeo and Juliet</i> ) Activity : Summarizing; Note-making and drawing inferences from Short videos												
<b>Module:7</b>	<b>Art of Public Speaking</b>											
Impromptu, Importance of Non-verbal Communication, Technical Talks, Dynamics of Professional Presentations – Individual & Group Activity : Ice Breaking; Extempore speech; Structured technical talk and Group presentation												
<b>Module:8</b>	<b>Reading Comprehension Skills</b>											
Skimming, scanning, comprehensive reading, guessing words from context, understanding text organization, recognizing argument and counter-argument; distinguishing between main information and supporting detail, fact and opinion, hypothesis versus evidence; summarizing and note-taking, Critical Reasoning Questions – Reading and Discussion Activity: Reading of Newspapers Articles and Worksheets on Critical Reasoning from web resources												

<b>Module: 9</b>	<b>Creative Writing</b>	<b>4 Hours</b>		
Structure of an essay, Developing ideas on analytical/ abstract topics Activity: Movie Review, Essay Writing on suggested Topics, Picture Descriptions				
<b>Module: 10</b>	<b>Verbal Aptitude</b>	<b>6 hours</b>		
Word Analogy, Sentence Completion using Appropriate words, Sentence Correction Activity: Practicing the use of appropriate words and sentences through web tools.				
<b>Module: 11</b>	<b>Business Correspondence</b>	<b>4 hours</b>		
Formal Letters- Format and purpose: Business Letters - Sales and complaint letter Activity: Letter writing- request for Internship, Industrial Visit and Recommendation				
<b>Module: 12</b>	<b>Career Development</b>	<b>6 hours</b>		
Telephone Etiquette, Resume Preparation, Video Profile Activity: Preparation of Video Profile				
<b>Module: 13</b>	<b>Art of Technical Writing - I</b>	<b>4 hours</b>		
Technical Instructions, Process and Functional Description Activity: Writing Technical Instructions				
<b>Module: 14</b>	<b>Art of Technical Writing – II</b>	<b>4 hours</b>		
Format of a Report and Proposal Activity: Technical Report Writing, Technical Proposal				
<b>Total Lecture hours:</b>		<b>60 hours</b>		
<b>Text Book / Workbook</b>				
1.	Sanjay Kumar & Pushp Lata, <i>Communication Skills</i> , 2 <sup>nd</sup> Edition, OUP, 2015			
2	Wren & Martin, <i>High School English Grammar &amp; Composition</i> , Regular ed., ND: Blackie ELT Books, 2018

<b>Pre-requisite</b>						<b>Syllabus version</b>
						1.1

## **Course Objectives:**

1. To make students understand and appreciate the unity of life in all its forms, the implications of life style on the environment.
  2. To understand the various causes for environmental degradation.
  3. To understand individuals contribution in the environmental pollution.
  4. To understand the impact of pollution at the global level and also in the local environment.

**Expected Course Outcome:** Students will be able to

1. Students will **recognize** the environmental issues in a problem oriented interdisciplinary perspectives
  2. Students will **understand** the key environmental issues, the science behind those problems and potential solutions.
  3. Students will **demonstrate** the significance of biodiversity and its preservation
  4. Students will **identify** various environmental hazards
  5. Students will **design** various methods for the conservation of resources
  6. Students will **formulate** action plans for sustainable alternatives that incorporate science, humanity, and social aspects
  7. Students will have foundational **knowledge** enabling them to make sound life decisions as well as enter a career in an environmental profession or higher education.

**Student Learning Outcomes (SLO):** 1,2,3,4,5,9,11,12

<b>Module:1</b>	<b>Environment and Ecosystem</b>	<b>7 hours</b>
-----------------	----------------------------------	----------------

Key environmental problems, their basic causes and sustainable solutions. IPAT equation. Ecosystem, earth – life support system and ecosystem components; Food chain, food web, Energy flow in ecosystem; Ecological succession- stages involved, Primary and secondary succession, Hydrarch, mesarch, xerarch; Nutrient, water, carbon, nitrogen, cycles; Effect of human activities on these cycles.

<b>Module:2</b>	<b>Biodiversity</b>	<b>6 hours</b>
-----------------	---------------------	----------------

Importance, types, mega-biodiversity; Species interaction - Extinct, endemic, endangered and rare species; Hot-spots; GM crops- Advantages and disadvantages; Terrestrial biodiversity and Aquatic biodiversity – Significance, Threats due to natural and anthropogenic activities and Conservation methods.

<b>Module:3</b>	<b>Sustaining Natural Resources and Environmental Quality</b>	<b>7 hours</b>
-----------------	---	----------------

Environmental hazards – causes and solutions. Biological hazards – AIDS, Malaria, Chemical hazards- BPA, PCB, Phthalates, Mercury, Nuclear hazards- Risk and evaluation of hazards. Water footprint; virtual water, blue revolution. Water quality management and its conservation. Solid and hazardous waste – types and waste management methods.

<b>Module:4</b>	<b>Energy Resources</b>	<b>6 hours</b>
Renewable - Non renewable energy resources- Advantages and disadvantages - oil, Natural gas, Coal, Nuclear energy. Energy efficiency and renewable energy. Solar energy, Hydroelectric power, Ocean thermal energy, Wind and geothermal energy. Energy from biomass, solar- Hydrogen revolution.		
<b>Module:5</b>	<b>Environmental Impact Assessment</b>	<b>6 hours</b>
Introduction to environmental impact analysis. EIA guidelines, Notification of Government of India (Environmental Protection Act – Air, water, forest and wild life). Impact assessment methodologies. Public awareness. Environmental priorities in India.		
<b>Module:6</b>	<b>Human Population Change and Environment</b>	<b>6 hours</b>
Urban environmental problems; Consumerism and waste products; Promotion of economic development – Impact of population age structure – Women and child welfare, Women empowerment. Sustaining human societies: Economics, environment, policies and education.		
<b>Module:7</b>	<b>Global Climatic Change and Mitigation</b>	<b>5 hours</b>
Climate disruption, Green house effect, Ozone layer depletion and Acid rain. Kyoto protocol, Carbon credits, Carbon sequestration methods and Montreal Protocol. Role of Information technology in environment-Case Studies.		
<b>Module:8</b>	<b>Contemporary issues</b>	<b>2 hours</b>
Lecture by Industry Experts		
	<b>Total Lecture hours:</b>	<b>45 hours</b>
<b>Text Books</b>		
1.	G. Tyler Miller and Scott E. Spoolman (2016), Environmental Science, 15 <sup>th</sup> Edition, Cengage learning.	
2.	George Tyler Miller, Jr. and Scott Spoolman (2012), Living in the Environment – Principles, Connections and Solutions, 17 <sup>th</sup> Edition, Brooks/Cole, USA.	
<b>Reference Books</b>		
1.	David M.Hassenzahl, Mary Catherine Hager, Linda R.Berg (2011), Visualizing Environmental Science, 4thEdition, John Wiley & Sons, USA.	
Mode of evaluation: Internal Assessment (CAT, Quizzes, Digital Assignments) & FAT
